# 1. Zu diesem Dokument

In diesem Dokument werden die Kodierrichtlinien für TEI/XML-Dokumente beschrieben, die im Projekt *Intertextuality in the Legal Papers of Karl Kraus. A Scholarly Digital Edition* (FWF Projektnr. P 31138-G30, PI DDr.in Katharina Prager) zur Anwendung kommen.

Dieses Projekt wird vom Ludwig Boltzmann Institut für Digital History (<https://geschichte.lbg.ac.at>) in Zusammenarbeit mit dem Austrian Centre for Digital Humanities and Cultural Heritage (ACDH-CH) der Österreichischen Akademie der Wissenschaften (<https://acdh.oeaw.ac.at>) und der Wienbibliothek im Rathaus (<https://www.wienbibliothek.at>) umgesetzt. Ziel des Projekts ist es, eine digitale Edition der Kanzleiakten aus der Kanzlei Oskar Samek zu erstellen, welche die Fälle dokumentieren, in die Karl Kraus involviert war. Diese digitale Edition soll es ihren Nutzer\_innen ermöglichen, den unterschiedlichen intertextuellen Bezügen in diesen Akten nachzuforschen.

Als Grundlage dient dabei einerseits das Vorgängerprojekt *Karl Kraus Online* (<https://www.kraus.wienbibliothek.at>), andererseits die digitalisierte Fassung der Kanzleiakten in der digitalen Wienbibliothek (<https://www.digital.wienbibliothek.at>). Diese beiden Quellen bauen auf der von Katharina Prager erstellten Ordnung der Bestandsliste des Kraus-Archivs der Wienbibliothek im Rathaus auf und orientieren sich an den Signaturen dieser Liste. Diese Ordnungslogik wird auch im vorliegenden Projekt als Ausgangsbasis übernommen. Ebenfalls eine wichtige Grundlage für die Editionsarbeit stellt die von Hermann Böhm erstellte, heute vergriffene Lese-Edition der Akten in vier Bänden dar (*Karl Kraus contra ...: die Prozeßakten der Kanzlei Oskar Samek in der Wiener Stadt- und Landesbibliothek, bearb. und kommentiert von Hermann Böhm, Wien, Wiener Stadt- u. Landesbibliothek, Bd. 1–4, 1995–1997*).

Im Rahmen des Projekts wird auf Basis der genannten Quellen für jedes erhaltene Einzeldokument im Archiv ein korrespondierendes TEI/XML-Dokument erstellt, in dem sich eine annotierte Transkription des Volltexts sowie alle relevanten Metadaten und Verweise auf Digitalisate des Archivdokuments befinden. Darüber hinaus wird pro Fall ein weiteres TEI/XML-Dokument angelegt, in dem die entsprechenden Metadaten festgehalten und eine Liste der zum Fall gehörigen Einzeldokumente angelegt wird. Wie genau diese TEI/XML-Dokumente entstehen und strukturiert sind, ist im Folgenden beschrieben.

## 2. Workflow

Der Workflow zur Erstellung eines Dokuments umfasst folgende Schritte:

- Auswahl des zu transkribierenden Dokuments
- Transkribus: Upload, Erstellen der Transkription
- Bildzuordnung
- Erstellen des TEI Dokuments
- Bearbeiten des TEI Dokuments

## 3. Metadaten des TEI-Dokuments

Das Element `<fileDesc>` enthält die Metadaten zum elektronischen Dokument.

```

### 3.1. Titel und Herausgeber\_in

Das Element `<titleStmt>` in der `<fileDesc>` enthält den Titel des Dokuments (`<title>`) sowie den Namen der Herausgeber\_in (`<editor>`). Die hier über das Attribut `ref` verlinkte Person ist für die digitale Version des Dokuments hauptverantwortlich.

```

<titleStmt>
  <title>Ladung zur Berufungsverhandlung (Landesgericht für Strafsachen I Wien, G. Z. 14 Bl 920/28, Josef Schaupp)</title>
  <editor ref="#IL"/>
</titleStmt>

```

### 3.2. Herausgebende Institutionen

Im Element `<publisher>` im `<publicationStmt>` finden sich Informationen zu den herausgebenden Institutionen des Dokuments. Im Falle des vorliegenden Projekts sind es drei Institutionen, die jeweils in einem `<publisher>`-Element mit entsprechenden Kindelementen (`<name>`, `<address>` (mit `<street>`, `<postCode>`, `<settlement>` und `<country>`) sowie `<ref>`) angeführt werden.

Das Element `<availability>` enthält im Element `<licence>` einen Verweis mittels `target` auf die Creative Commons-Lizenz, unter der die Daten bereitgestellt werden.

Die `<idno>` Elemente geben interne und externe Identifier an. In der Regel sind drei `<idno>`-Elemente vorhanden. Das erste verweist mit dem `type` URL und dem `subtype` legalkraus auf die ID in der digitalen Edition. Die zweite verweist mit demselben `type` und dem `subtype` krausonline auf die ID im schon genannten Vorgängerprojekt *Karl Kraus Online* (<https://www.kraus.wienbibliothek.at>). Das dritte `<idno>`-Element ist, insofern eine Transkription des Dokuments angefertigt wurde, vom `type` ID und dem `subtype` transkribus. Dieser letzte Identifier bezieht sich auf die ID im Transkriptionsprogramm Transkribus.

```

```

### 3.3. Verknüpfung mit dem Fall

Im Element `<title>` vom *type* collection im `<seriesStmnt>` findet sich die Information zu dem Fallkomplex, dem das Dokument angehört. Das Attribut *ref* verweist dabei auf das entsprechende Falldokument in der digitalen Edition.

```

<seriesStmnt>
  <title type="collection"
    ref="https://id.acdh.oeaw.ac.at/legalkraus/C_000002">Karl Kraus ca. Reichspost</title>
</seriesStmnt>

```

### 3.4. Status des Dokuments, Arbeitsstand

Der Status der Bearbeitung des gesamten Dokuments wird in der `<revisionDesc>` im Attribut *status* notiert. Ist das Dokument noch in Bearbeitung, hat *status* den Wert *draft*. Sind alle Arbeitsschritte für das Dokument abgeschlossen, hat *status* den Wert *done*.

Allgemeiner ausgedrückt umfassen die Arbeitsschritte, die in `<change>`-Elementen notiert werden, die Bearbeitung des TEI-Headers sowie der Faksimiles (*type* header\_facsimile), die strukturelle Auszeichnung (*type* structure), die Vergabe von Referenzen (*type* references), die Annotation typographischer Besonderheiten (*type* typography), die Kennzeichnung von Intertexten (*type* intertexts) und Korrekturvorgänge (*type* corrections).

Jedes `<change>`-Element wird nicht nur näher im Hinblick auf den Arbeitsschritt mittels des *type*-Attributs bestimmt, sondern erhält auch ein *when-iso*-Attribut mit der Angabe des Datums der Fertigstellung des Arbeitsschrittes sowie ein *who*-Attribut, das auf die Person verweist, welche diesen Arbeitsschritt durchgeführt hat.

```

<!-- LU: wäre eine Überlegung wert, changes von Ingo im Sinne der Vereinheitlichung noch zu typisieren --><revisionDesc status="draft">
  <change type="intertexts"
    when-iso="2021-03-17" who="#JK" />
  <change type="typography"
    when-iso="2021-03-17" who="#JK" />
  <change type="references"
    when-iso="2021-03-17" who="#JK" />
  <change type="structure"
    when-iso="2021-03-17" who="#JK" />
  <change when-iso="2020-07-21T12:53:42.834Z"
    who="#IB">created by API</change>
  <change when-iso="2020-10-01T12:09:09.817Z"
    who="#IB">Replaced Text with Transcription of Transkribus Document 292191.</change>
</revisionDesc>

```

## 4. Metadaten zum historischen Dokument

Ebenfalls im `<teiHeader>` werden Metadaten zum historischen Dokument hinterlegt.

### 4.1. Quelle, Textzeugen, Beilagen

Informationen zur Quelle finden sich im Element `<sourceDesc>`. Im Kindelement `<listWit>` wird der Textzeuge bzw. werden die Textzeugen in einem oder mehreren `<witness>`-Elemente(n) mit einer *xml:id* sowie einer Verlinkung auf das entsprechende Faksimile in *facs* angegeben.

Stempel werden in der `<sourceDesc>` im Kindelement `<msDesc>` im Element `<ab>` mit dem Attribut *type* und dem Wert *stamp* notiert. Im Attribut *source* des `<stamp>`-Elements wird auf die Quelle des Stempels verwiesen, durch die *xml:id* wird der Stempel zudem eindeutig identifizierbar.

```

<msDesc>
  <ab type="stamp">
    <stamp xml:id="uuid_79f806a1-ab26-445f-b806-alab26c45fb5"
      source="#36793" />
  </ab>

```

```
</msDesc>
```

Ist eine Beilage zu einem Dokument vorhanden, wird dieses im Element `<physDesc>` bzw. genauer in seinem Kindelement `<accMat>` mit einer `xml:id` sowie gegebenenfalls mit einer Verlinkung auf das entsprechende Beilagedokument in `source` festgehalten. Im Text selbst wird die Beilage mit dem Element `<ab>` versehen. Dieses erhält das Attribut `type` mit dem Wert `appendix` sowie gegebenenfalls eine Verlinkung auf das entsprechende `<accMat>`-Element im Header. Ein Beispiel für die Kodierung von Beilagen im `<body>`:

```
<ab type="appendix"
  source="#D_000002-002-000-acc001">1 Beilage</ab>
```

Informationen zur Materialität des Dokuments sind ebenso in der `<physDesc>` im Kindelement `<ab>` mit dem `type` `materiality` notiert. In `<objectType>` wird mit dem Attribut `ref` auf die projektspezifische Taxonomie verwiesen, in der die zur Auswahl stehenden Materialitätstypen definiert sind. Als String sind ebenso eine Prosabeschreibung des Materialitätstyps sowie die entsprechende Sigle vorhanden. Sind mehrere Textzeugen überliefert, werden mehrere `<objectType>`-Elemente angelegt und mit `source`-Attributen versehen.

```
<sourceDesc>
  <listWit>
    <witness xml:id="D_000002-002-000-wit01"
      facs="#D_000002-002-000-facs001"/>
    </listWit>
  <msDesc>
    <ab type="stamp">
      <stamp xml:id="uuid_79f806a1-ab26-445f-b806-a1ab26c45fb5"
        source="#36793"/>
    </ab>
  </msDesc>
  <physDesc>
    <accMat xml:id="D_000002-002-000-acc001"
      source="#D_000002-002-001">1 Beilage</accMat>
    <ab type="materiality">
      <objectType ref="https://vocabs.acdh.oew.ac.at/...>Typoskript, M.T.xxx</objectType>
    <!-- LU: Link und Sigle müssen noch ausgebessert werden -->
    </ab>
  </physDesc>
</sourceDesc>
```

## 4.2. Kontextinformationen

Im Element `<profileDesc>` lassen sich Kontextinformationen zum Dokument, etwa den beteiligten Personen, dem Entstehungsdatum, usw. hinterlegen.

### 4.2.1. Datierung

Zur Datierung (und als Grundlage für eine Sortierung) wird innerhalb von `<creation>` ein Datum im ISO-Format (JJJJ-MM-TT) im Attribut `when-iso` angegeben. Ist ein Dokument nicht eindeutig datierbar, so wird das Datum mit `notBefore-iso` und / oder `notAfter-iso` eingeschränkt. Für die Sortierung wird `sortDate` hinzugefügt. Wenn eine Datierung nicht möglich ist, ist weder `sortDate` noch ein ISO-Wert vorhanden. Zur weiteren Klassifizierung des Datums wird `subtype` eingeführt. Zur Auswahl stehen die Werte `produced` (Datum der Entstehung) und `received` (Datum des Empfangens). Der String entspricht einem normalisierten Datum im Format TT.MM.JJJJ.

```
<creation>
  <date type="sortDate" subtype="received"
    when-iso="1922-11-30">30.11.1922</date>
</creation>
```

### 4.2.2. Sprache

In `<langUsage>` wird die Sprache des Dokuments festgehalten. In `<language>` wird dem Attribut `ident` ein Wert zugeordnet, z. B. `de` für ein deutschsprachiges Dokument (ISO 639).

```
<langUsage>
  <language ident="de">Deutsch</language>
</langUsage>
```

### 4.2.3. Klassifizierung des Dokuments

Auf der Dokumentenebene wird in `<textClass>` der Dokumenttyp definiert. Im Kindelement `<keywords>` mit dem passenden `<term>` ist eine Prosabezeichnung des Dokumenttyps zu finden. Im Kindelement `<classCode>` mit dem Attribut `scheme`, welches auf den entsprechenden Datensatz in der projektspezifischen Taxonomie verweist, ist als String die Sigle für den Datensatz zu finden. Grundsätzlich sind mehrere Dokumenttypen – im Gegensatz zu den singulären Materialitätstypen (siehe `sourceDesc`) – bei einem Dokument möglich. Sind mehrere Textzeugen vorhanden, so wird `<term>` und `<classCode>` das Attribut `source` hinzugefügt, das auf den entsprechenden Textzeugen verweist.

```
<textClass>
  <keywords>
    <term source="#D_000002-002-000-wit01">Brief</term>
    <term source="#D_000002-002-000-wit02">Brief</term>
  </keywords>
  <classCode scheme="https://vocabs.acdh.oew.ac.at/legalakraus-doctypes/v1.0/"
    source="#D_000002-002-000-wit01">D.K.BRF</classCode>
```

```
<classCode scheme="https://vocabs.acdh.oeaw.ac.at/legalkraus-doctypes/v1.0/"
source="#D_000002-002-000-wit02">D.K.BRF</classCode>
</textClass>
```

#### 4.2.4. Beteiligte Personen und Institutionen

In der `<particDesc>` werden beteiligte Personen und Institutionen (im Unterschied zu rein namentlich genannten) in ihrer Rolle (*role*) verzeichnet. Im Element `<listPerson>` und den entsprechenden Kindelementen `<person>` werden beteiligte Personen festgehalten. Jedes `<person>`-Element erhält dabei ein Attribut *role* mit einem Verweis auf die Rolle der Person in diesem Dokument. Der Wert von *role* entspricht einer projektspezifischen Taxonomie. Jede Person erhält außerdem einen Verweis auf den entsprechenden Datensatz in der PMB mittels eines *ref*-Attributs sowie ein Kindelement mit dem Namen der Person, `<persName>`. Analog funktioniert die Dokumentation der beteiligten Institutionen: Im Element `<listOrg>` werden `<org>`-Elemente mit dem Kindelement `<orgName>` sowie den Attributen *role* und *ref* angegeben.

```
<particDesc>
  <listPerson>
    <person role="https://vocabs.acdh.oeaw.ac.at/legalkraus-roles/v1.0/plaintiff"
      ref="#11988">
      <persName>Karl Kraus</persName>
    </person>
    <person role="https://vocabs.acdh.oeaw.ac.at/legalkraus-roles/v1.0/defendant"
      ref="#40703">
      <persName>Karl Schiffleitner</persName>
    </person>
  </listPerson>
  <listOrg>
    <org role="https://vocabs.acdh.oeaw.ac.at/legalkraus-roles/v1.0/defendant"
      ref="#29637">
      <orgName>Reichspost</orgName>
    </org>
  </listOrg>
</particDesc>
```

#### 4.2.5. Metadaten zu Korrespondenzstücken

Metadaten zu Korrespondenzstücken werden in der `<correspDesc>` versammelt. Bei Dokumenten, die keine Korrespondenzstücke ausmachen, fehlt dieser Abschnitt. Es gibt drei Möglichkeiten für die Struktur der `<correspDesc>`: Erstens ist sowohl der *der Absender\_in* als auch der *die Empfänger\_in* eine Person. Zweitens ist der *der Absender\_in* eine Person, der *die Empfänger\_in* eine Institution. Drittens ist der *der Absender\_in* eine Institution, der *die Empfänger\_in* eine Person. Entsprechend kommen die Elemente `<persName>` bzw. `<orgName>` zum Einsatz.

Die Namen werden dem Original entnommen. Zeilenfälle werden mit einem senkrechten Strich (|) notiert. Die 'Rolle', z. B. Rechtsanwalt, wird gegebenenfalls ebenso angegeben.

Der *der Absender\_in* wird in `<correspAction>` mit dem Attribut *type* und dem Attributwert *sent* festgehalten. Der *die Empfänger\_in* hingegen ist in `<correspAction>` *type* *received* zu finden. Die Rollen der Personen und Institutionen, die sich aus der projektspezifischen Taxonomie ergeben, werden in `<roleName>` angegeben und mittels *ref* mit der entsprechenden Klassifikation in der Taxonomie verknüpft.

In `<address>` werden die Anschriften dokumentiert. `<street>` verweist auf einen Eintrag in der PMB und `<settlement>` ebenso. Das Datum wird sowohl im ISO-Format in *date* als auch originalgetreu im entsprechenden String wiedergegeben.

In `<noteGrp>` sind optional weitere Metadaten zur Korrespondenz enthalten. Mittels `<note>` und entsprechenden *type*-Attributen kann ein Betreff (subject) und eine Diktatsigle (dictation) verzeichnet werden.

```
<correspDesc>
  <correspAction type="sent">
    <persName ref="#11988">Karl Kraus</persName>
    <roleName ref="https://vocabs.acdh.oeaw.ac.at/legalkraus-roles/v1.0/defendant"/>
  <!-- LU: korrigieren -->
  <address>
    <street corresp="#50496">Hintere Zollamtsstrasse Nr.3</street>
    <settlement ref="#53">Wien III.</settlement>
  </address>
  <date when-iso="1931-01-15"/>
</correspAction>
  <correspAction type="received">
    <orgName ref="#50491">Strafbezirksgericht I</orgName>
    <roleName ref="https://vocabs.acdh.oeaw.ac.at/legalkraus-roles/v1.0/plaintiff"/>
  <!-- LU: korrigieren -->
  <address>
    <street corresp="#50664"/>
    <settlement ref="#53">Wien</settlement>
  </address>
  <date when-iso="1931-01-16">16. JAN. 1931</date>
</correspAction>
  <noteGrp>
    <note type="subject">Privatanklage</note>
    <note type="dictation"/>
  </noteGrp>
</correspDesc>
```

#### 4.2.6. Schreiberhände

Schreiberhände werden im Header innerhalb des Elements `<handNotes>` definiert. Sind keine `<handNotes>` angelegt, handelt es sich standardmäßig um Typoskripte.

Jede Schreiberhand wird in einem `<handNote>`-Element festgehalten. Dieses enthält eine *xml:id*, einen Hinweis auf das Schreibmedium (Bleistift, Tinte ...) in *medium* sowie gegebenenfalls eine Verlinkung mit der schreibenden Person in *scribeRef*, dem entsprechenden Textzeugen in *source*, einer Angabe zur Sicherheit der Aussage in *cert* und eine Zuschreibung der Verantwortlichkeit für die Definition der Hand in *resp*.

```
<handNotes>
  <handNote xml:id="D_000001-001-000-hand01"
    source="#D_000001-001-000-wit01" scribeRef="#38909" medium="black-ink"
    cert="high" resp="#IL" />
</handNotes>
```

## 5. Bilddaten

Die der digitalen Edition zugrundeliegenden Faksimiles sind in `<facsimile>` zu finden. Innerhalb von `<facsimile>` ist mindestens eine `<surfaceGrp>` enthalten. Diese beschreibt ein Blatt. Dieses Blatt kann in mehrere `<surface>`-Elemente unterteilt werden. Diese machen die Seiten aus, die mittels *type* und *recto* bzw. *verso* (Vorder-/ Rückseite) noch näher bestimmt werden. Diese `<surface>`-Elemente beinhalten wiederum ein bis drei `<graphic>`-Elemente, die mittels *source* und entsprechenden Attributwerten unterschieden werden. Liegt ein Doppelblatt vor, so wird die Gruppierung der Faksimiles entsprechend angepasst.

Die Faksimiles des Vorläuferprojekts "Karl Kraus Online" werden mit dem Attributwert *krausonline* versehen, jene der Wienbibliothek im Rathaus mit *wienbibliothek* und jene der projekteigenen Scans mit *scans*. Sowohl `<facsimile>` als auch `<surfaceGrp>` und `<surface>` erhalten eine *xml:id* zur eindeutigen Identifizierung. Derzeit sind die Faksimiles nur für den 'Haupttextzeugen' zugeordnet. Insofern weitere Textzeugen vorhanden und verlinkt sind, werden diese in einem weiteren `<facsimile>`-Element mit dem Attribut *type* und dem Wert *further-witnesses* zur vorläufigen Differenzierung versehen.

```
<facsimile xml:id="D_000002-002-000-facs001">
  <surfaceGrp xml:id="D_000002-002-000-facs001-1001">
    <surface xml:id="D_000002-002-000-facs001-1001-p001"
      type="recto">
      <graphic url="http://www.kraus.wienbibliothek.at/sites/biographeme.com/files/images/object/00000019.jpg"
        source="krausonline" />
      <graphic url="ZPH_1545-1/001_010/00000019.jpg"
        source="scans" />
      <graphic url="https://www.digital.wienbibliothek.at/wbrobv02/i3f/v21/2540028/full/full/0/default.jpg"
        source="wienbibliothek" ana="status:checked" />
    </surface>
    <surface xml:id="D_000002-002-000-facs001-1001-p002"

        source="krausonline" />
      <graphic url="ZPH_1545-1/001_010/00000021.jpg"
        source="scans" />
      <graphic url="https://www.digital.wienbibliothek.at/wbrobv02/i3f/v21/2540030/full/full/0/default.jpg"
        source="wienbibliothek" ana="status:checked" />
    </surface>
  </surfaceGrp>
</facsimile>
```

## 6. Transkription des Dokuments

Die Transkription erfolgt im Element `<body>` des Elements `<text>`.

### 6.1. Editorische Einrichtungsfragen

Folgende Prinzipien wurden bei der Erstellung der Transkriptionen mit Transkribus berücksichtigt:

Spatien zwischen Abkürzungen, 'Z.A.' oder 'Z. A.', 'St.P.O.', 'P.A.', 'Urh.Ges.' etc., 'Art. IX' oder 'Art.IX', bei Datumsangaben, Komposita wie 'Kronos-Verlag' ('Kronos - Verlag') werden grundsätzlich nicht gesetzt.

Paginierungen im Typoskript werden nicht transkribiert.

Der Umgang mit Aktenzeichen, tabeller. Darstellung, muss mit einem Editionsbeispiel geklärt und auch mit dem Staatsarchiv geklärt werden, 35.13. 4. Seite - Check Formatierung Tabelle / Zeilen

Vorgefertigte Briefköpfe (Adressen etc.) werden erst einmal nicht zeilengetreu transkribiert bzw. nicht wiedergegeben; Durchsuchbarkeit durch Angabe im TEI-Header möglich

Interpunktion erfolgt zunächst streng nach Typoskript (selbst wenn dort eine Struktur erkennbar ist, die nicht konsequent eingehalten wird [etwa bei Aufzählungen etc.]) und wird nicht korrigiert, Bsp: 27.5, S. 4: Dr. Josef Szekely Wien, IX. Canisiusgasse 8 (Stunde)

Falsche Apostrophierung wird ebenfalls nicht korrigiert: Bsp. Ely's in Elys -> Tippfehler werden allerdings korrigiert, ebenso Anführungszeichen nach typographischen Regeln übernommen (öffnende und schließende sowie normale und einfache entsprechend angleichen), hingegen wird Grammatik/Rechtschreibung übernommen, aber Durchsuchbarkeit sollte stets gewährleistet bleiben

Bei Hochstellung von Zahlen und Buchstaben wird verzichtet: bspw. Hochstellung bei Dr wird immer mit Dr. wiedergeben, bei Uhrzeiten ebenfalls auf Hochstellung verzichten

Abkürzungen in hs. Protokollen werden aufgelöst: bspw. Zge -> Zeuge

Problem bei Korrektur der Rechtschreibung: nach zeitgenössischen Rechtschreibregeln -> wahrscheinlich brauchen wir einfach klare Regeln, wann man in Rechtschreibung u. Interpunktion eingreift, ansonsten greift man in Sprachgebrauch zu sehr ein oder man erstellt künstliche Texte, die es gar nicht gibt: Angenommenes Beispiel: Kraus beruft sich in einem Anschreiben auf fehlerhafte Schreibweise und gründet seine Thesen darauf, an der Stelle dürfte man natürlich nicht die fehlerhafte Schreibweise korrigieren, das Problem ist dann aber, dass wir dies konsequent tun, damit die Lesbarkeit bzw. Recherche nicht beeinträchtigt ist -> inkonsequente Vorgehensweise durch vernünftige Regeln möglichst vermeiden: sollte man bspw. den Rechtschreibfehler „dass“ nicht korrigieren, da an der Stelle eigentlich ein Relativsatz gemeint ist und kein konsekutiver oder „einer strengerer Behandlung unterliegen würde“ nicht in „einer strengeren Behandlung unterliegen würde“? Hier handelt es sich ja nicht um Tippfehler

Unterführungszeichen " werden aufgelöst, da wir Texte nicht standgenau wiedergeben

Bei Darstellung „Beschwerde ..... S 4.“ werden Punkte ebenfalls weggelassen

Datumsangaben bei Durchschlägen wie bspw. 11. November 7 sollten nicht unvollständig, also mimetisch, wiedergegeben, sondern vollständig, 11. November 1927 (nach dem wahrscheinlich nicht mehr vorhandenen Original), angegeben werden; in Edition als Hinzufügung wiedergeben?

Wie werden Dokumente mit Tabellen dargestellt? Bsp: 31.15: nicht tabellarisch, siehe 134.71: wieviele tabell. Dok. gibt es? Wiedergabe überlegen

Bei Verwendung von J anstelle des I wird der Buchstabe entsprechend angeglichen, Bsp.: Ich in Ich, ein entsprechender Hinweis und erläuternder Kommentar sollte aber im Header erfolgen. Interessanterweise tritt diese Schreibweise v.a. bei Botho Laserstein auf, der offenbar für Schriftfragen sensibilisiert zu sein schien. So benutzte Laserstein u.a. eine Schreibmaschine, die keine Monospace, sondern Schwabacher Schrift verwendete, zudem setzte er in seinen Briefen Kustoden, die eigentlich primär für den Buchdruck vorgesehen waren. Diese wenigen Merkmale weisen darauf hin, dass Laserstein auf die Lesbarkeit seiner Briefe achtete. Unter Umständen ist so auch die eigentümliche J-Schreibung zu erklären: In der Monospace ähnelt das Versal-I dem Minuskel-L; durch die J-Schreibung, die in Handschriften noch durchaus üblich war, da in der Kurrentschrift das versale J und versale I kaum zu unterscheiden waren sowie bis in das 17./18. Jahrhundert die Buchstaben äquivalent verwendet wurden, konnte deutlich zwischen Versal-I und dem kleinen I differenziert werden.

Sehr geehrter Herr Kollege ! wird zu Sehr geehrter Herr Kollege! Abstand wird nicht übernommen.

Deckblätter bei Anträgen, Urteilen etc. werden stets ediert

falsche Schreibweise von Eigennamen bleibt erhalten, wenn es sich um keine Tippfehler handelt bzw. nur bei eindeutigen Tippfehlern wie Buchstabendrehern wird in den Text eingegriffen

Stempel werden in Transkribus mit eigener Textregion (tag mit element stamp) erfasst: d.h. sie werden nicht transkribiert bzw. wichtige Informationen wie Eingangsdatum im Header erfasst; Stempel werden aber ausgeschnitten, so dass jede Stempelart der Akten einsehbar ist. Arbeit könnte von den nächsten Praktikantinnen übernommen werden?

auch Beschreibungen wie Blatt 2 werden. nicht gesetzt, weil Paginierungen nicht ediert werden

Umgang mit zweispaltigen Satz? Bsp.: 70.3, besonders schwierig: 70.5 mit: news-eye können mehrere Spalten mit Text aufgezogen werden

Kustoden werden im Header kommentiert bzw. erläutert, nicht aber in der Transkription aufgenommen

Umgang mit zwei Fassungen einer Seite in einem Schriftsatz, Bsp.: 68.62, Seite 8 und Seite 9 (einmal mit handschriftlichen Korrekturen, einmal ohne) – funktioniert das hier mit Editionsrichtlinien Punkt 5 (Varianten aus Vorstufen mitgeteilt): an der betreffenden Stelle ist die Grundlage die späte Fassung; aufgenommen wird aber auch die frühe Fassung mit den Änderungen, die als Streichungen und Hinzufügungen dargestellt werden; schließlich wird es so für die betreffenden Zeilen zwei mögliche Versionen geben: den Entwurf als frühe Fassung und die Umsetzung des Entwurfs als späte Fassung; diese Lösung scheint besser als etwa die Darstellung der frühen Fassung in einem Variantenapparat, da so die Änderungen besser nachvollziehbar sind.

## 6.2. Textstruktur

Trennstriche usw. werden nicht kodiert, stattdessen werden, wenn möglich, Struktureinheiten angesetzt.

### 6.2.1. Seitenwechsel

Seitenwechsel werden mit `<pb>` markiert. Sie werden außerdem durch das Attribut `n` und dem entsprechenden Attributwert (z. B. 1 für die erste Seite) ausgezeichnet. Darüber hinaus werden sie mit den Bilddaten verknüpft. Dies geschieht über das Attribut `facs` und dem entsprechenden Verweis auf das `<surface>`-Element. Durch das Attribut `xml:id` erhält das Element außerdem eine eindeutige ID.

```
<pb xml:id="uuid_01b00d2d-7002-4209-b425-a0a147ea957d"
n="1"
facs="#D_000002-002-000-facs001-1001-p001"/>
```

### 6.2.2. Absätze

Die größte Struktureinheit nach der Seite (`<pb>`) ist der Absatz: `<p>`. Dieser erhält eine `xml:id`.

```
<p xml:id="uuid_401e1862-85b6-4dfb-9d95-77543d6f4edf">
  <lb xml:id="uuid_d3bfe99e-be54-4a0f-bfe9-9ebe54fa0f46"/>1.) Anberaumung einer Hauptverhandlung;
  <lb xml:id="uuid_bf8b41d7-0095-409d-8b41-d70095a09d1c"/>2.) Ladung des <rs type="person" ref="#51602">Beschuldigten</rs>;
  <lb xml:id="uuid_2f30be6b-1ca6-45fe-b0be-6b1ca615fe7d"/>3.) Verlesung des Berichtigungsschreibens und der vorgelegten
  <lb xml:id="uuid_7d4a1760-6919-42fb-8a17-60691902fb9c"/>
  <rs type="work" ref="#53857">Zeitungsnummer</rs>;
</p>
```

### 6.2.3. Abschnitte / Divisions: mehrere Textzeugen, unterschiedliche Dokumente unter einer Signatur und Rekonstruktionen Böhm's

Sind mehrere Textzeugen eines Schriftstücks vorhanden und werden auch mehrere Textzeugen ediert (s. editorische Richtlinien), so wird nach dem 'primären' Textzeugen im `<body>` der weitere Textzeuge eingefügt und mit `<div>` ausgezeichnet. Außerdem erhält er ein `type`-Attribut mit dem Wert `wit`. Verlinkt wird der Textzeuge in `<div>` mit einem `source`-Attribut, das auf das entsprechende `<witness>`-Element bzw. das Faksimile verweist. Der Abschnitt selbst wird, ebenso wie der folgende, mit einer `xml:id` eindeutig identifizierbar gemacht.

```
<div xml:id="D_000068-044-000-wit-div-001"
type="wit" source="#D_000068-044-000-wit01"/>
```

Sind mehrere Textzeugen eines Schriftstücks vorhanden, wird aber nur einer in seiner Gänze kodiert, kann Varianz unter Textzeugen trotzdem mittels eines Variantenapparats festgehalten werden. Dabei wird an der jeweiligen Stelle im `<body>` ein Apparat mit `<app>` eingefügt. In diesem wird in `<lem>` mit den Attributen `wit` (verlinkt den betroffenen Textzeugen) und `hand` (verlinkt die betroffene Schreiberhand) ein Lemma bzw. eine präferierte Lesart festgelegt. Im folgenden `<rdg>`, mit denselben Attributen wie bei `<lem>`, wird die Variante eines weiteren Textzeugen notiert.

```
<lb xml:id="uuid_55cfaeb3-0c8b-4901-8fae-b30c8b6901ee"/>Zu der Meldung, dass die Wiener
<app>
  <lem wit="#D_000002-002-000-wit01"
hand="#D_000002-002-000-hand01">Renaissancebühne</lem>
  <rdg wit="#D_000002-002-000-wit02"
hand="#D_000002-002-000-hand02">Bühne</rdg>
</app>
```

Wenn es zur Verwendung dieses Variantenapparats in einem Dokument kommt, muss im Header, nach `<fileDesc>` und vor `<profileDesc>`, eine `<encodingDesc>` eingefügt werden. Diese beinhaltet wiederum das Element `<variantEncoding>`. Bei diesem wird durch den Wert `parallel-segmentation` für `method` und den Wert `internal` für `location` angegeben, um welche Form des Variantenapparats es sich handelt.

```
<encodingDesc>
  <variantEncoding method="parallel-segmentation"
location="internal"/>
</encodingDesc>
```

Wenn unterschiedliche Dokumente unter einer Signatur vorhanden sind (z. B. ein Brief und ein Protokoll), wird ebenfalls auf `<div>` zurückgegriffen, hier mit dem `type` `doc`. Das Attribut `source` verweist gegebenenfalls auf eine weitere Signatur, die das entsprechende Schriftstück verzeichnet.

```
<div xml:id="D_000068-044-000-doc-div-001"
type="doc" source="#D_000068-044-001"/>
```

Nicht nur für die Auszeichnung mehrerer Textzeugen und unterschiedlicher Dokumente unter einer Signatur, sondern auch für Rekonstruktionen von Dokumenten durch Hermann Böhm wird `<div>` verwendet. Dies betrifft den Aktenkomplex 192, in dem einige Schriftstücke nicht ediert wurden, weil die entsprechenden Objekte fehlen. Stattdessen werden Rekonstruktionen dieser Texte von Hermann Böhm festgehalten und mit einem `type`-Attribut mit dem Wert `boehm-reconstruction` gekennzeichnet.

```
<div type="boehm-reconstruction">
  <p>Ersucht um Übersendung eines Werkverzeichnisses von Karl Kraus mit Anzahl der Exemplare und Preisangabe, da der Verlag Melantrich daran int</p>
</div>
```

### 6.2.4. Fehlende Objekte

Ist ein Objekt nicht (mehr) vorhanden, aber dennoch mittels einer Signatur im Aktenbestand verzeichnet, so wird im entsprechenden `<body>` der Dokumente mit dem Hinweis "Objekt fehlt" darauf aufmerksam gemacht.

```
<body>
<p>D_000181-001-000: Objekt fehlt.</p>
</body>
```

### 6.2.5. Zeilenfall

Zeilenfälle werden mit `<lb>` markiert. Kommt es innerhalb eines Worts zu einem Zeilenfall, so wird in der folgenden Zeile dem Element `<lb>` das Attribut *break* mit dem Wert `no` beigelegt. Insofern eine eindeutige Identifizierung von Zeilen angestrebt wird, erhält jedes `<lb>`-Element außerdem eine *xml:id*.

```
<lb xml:id="uuid_45105d00-1bba-4ea6-905d-001bbabea608"/>Beschuldigter: <rs type="person"
ref="https://pmb.acdh.oeaw.ac.at/entity/51602">Josef <hi rend="spaced">Koller</hi>
</rs>, verantwortlicher Redak
<lb xml:id="uuid_588cb55f-c706-4cc9-8cb5-5fc706dcc959"
break="no"/>teur der Zeitung „<rs type="institution" ref="37568">Der Wiener Tag</rs>"
```

### 6.2.6. Marginalien

Marginalien werden auf zwei Arten ausgezeichnet:

Marginalien ohne Text: Kodierung mit `<metamark>`, dem Attribut *function* und dem Wert *marginal*. Mittels *hand* wird auf die entsprechende Schreiberhand verwiesen, mittels *rend* auf die Position der Marginalie auf dem Objekt.

```
Abschrift.<metamark function="marginal"
hand="#D_000001-001-000-hand01" rend="marginRight"/>
```

Marginalien mit Text: Kodierung mittels `<note>`, dem Attribut *type* und dem Wert *marginal*. Mittels *hand* wird auf die entsprechende Schreiberhand verwiesen, mittels *rend* auf die Position der Marginalie auf dem Objekt.

```
Abschrift.<note type="marginal"
hand="#D_000001-001-000-hand01" rend="marginRight">1933</note>
```

## 6.3. Typografische Hervorhebungen

Grundsätzlich werden typographische Auszeichnungen mit `<hi>` ausgezeichnet. Je nachdem, welche Hervorhebung vorliegt, kommen unterschiedliche Werte für *rend* zum Einsatz. Handelt es sich um eine Unterstreichung, so wird der Wert *underlined* angegeben. Liegt eine Sperrung vor, bekommt *rend* den Wert *spaced*. Fette Stellen werden mit *bold* ausgezeichnet, kursive mit *italics*.

```
<hi rend="spaced">Privatanklage</hi>
```

Liegt eine handschriftliche Hervorhebung vor, so kann die entsprechende Schreiberhand im Attribut *hand* verlinkt werden.

```
<hi rend="underlined"
hand="#D_000001-001-000-hand01">Anträge</hi>
```

## 6.4. Eingriffe in den Text

Semantisch relevante Sofort- und Spätkorrekturen werden auf unterschiedliche Weisen ausgezeichnet:

Einfügungen werden mit `<add>` ausgezeichnet. Handelt es sich um eine handschriftliche Einfügung, so wird das Attribut *hand* mit Verweis auf die entsprechende Schreiberhand ebenso verzeichnet.

```
Ein <add hand="#D_000001-001-000-hand01">neuer</add> Antrag.
```

Tilgungen werden mit `<del>` ausgezeichnet. Handelt es sich um eine handschriftliche Tilgung, so wird das Attribut *hand* mit Verweis auf die entsprechende Schreiberhand ebenso verzeichnet.

```
Ein <del hand="#D_000001-001-000-hand01">alter</del> Antrag.
```

Ersetzungen werden mit `<subst>` ausgezeichnet. Handelt es sich um eine handschriftliche Ersetzung, so wird das Attribut *hand* mit Verweis auf die entsprechende Schreiberhand ebenso verzeichnet.

```
Ein <subst hand="#D_000001-001-000-hand01">
<del>alter</del>
<add>neuer</add>
</subst> Antrag.
```

Bestandteile von Umstellungen werden mit `<seg>` mit dem *type* *transposition* ausgezeichnet. Jedes `<seg>`-Element erhält dabei eine *xml:id*. Die Umstellung selbst wird mit dem Element `<metamark>` gekennzeichnet, welches das Attribut *function* mit dem Wert *transposition* und einer Verlinkung auf das entsprechende `<seg>`-Element in *target* enthält. Handelt es sich um eine handschriftliche Umstellung, so wird die entsprechende Schreiberhand mit Hilfe des Attributs *hand* angeführt.

```
<seg type="transposition"
xml:id="D_000001-001-000_seg001">Der</seg>
<metamark function="transposition"
hand="#D_000001-001-000-hand01" target="#D_000001-001-000_seg001"/>
<seg type="transposition"
xml:id="D_000001-001-000_seg002">Antrag</seg>
<metamark function="transposition"
hand="#D_000001-001-000-hand01" target="#D_000001-001-000_seg002"/>
<seg type="transposition"
xml:id="D_000001-001-000_seg003">ist</seg>
<metamark function="transposition"
hand="#D_000001-001-000-hand01" target="#D_000001-001-000_seg003"/>
<seg type="transposition"
```

```
xml:id="D_000001-001-000_seg004">neu</seg>
<metamark function="transposition"
hand="#D_000001-001-000-hand01" target="#D_000001-001-000_seg004"/>.
```

Im Header wird sodann in die `<profileDesc>` `<listTranspose>` mit der betroffenen Umstellung eingefügt. Im Element `<transpose>` mit einer möglichen Verlinkung auf eine Schreiberhand in *hand* befinden sich sodann `<ptr>`-Elemente, die mittels des Attributs *target* auf die entsprechenden `<seg>`-Elemente im `<body>` verweisen.

```
<listTranspose>
  <transpose hand="#D_000001-001-000-hand01">
    <ptr target="#D_000001-001-000_seg004"/>
    <ptr target="#D_000001-001-000_seg003"/>
    <ptr target="#D_000001-001-000_seg001"/>
    <ptr target="#D_000001-001-000_seg002"/>
  </transpose>
</listTranspose>
```

Getilgte bzw. zurückgenommene Überarbeitungen werden mit `<restore>` ausgezeichnet. Handelt es sich um eine handschriftliche Korrektur, so wird die entsprechende Schreiberhand über das Attribut *hand* hinzugefügt.

```
Der Antrag ist <restore hand="#D_000001-001-000-hand01">
<del hand="#D_000001-001-000-hand01">sehr</del>
</restore> alt.
```

Sind Korrekturen innerhalb von Korrekturen vorhanden, etwa eine Tilgung in einer Hinzufügung (`<del>` in `<add>`), so werden die Elemente entsprechend geschachtelt. Davon ausgenommen ist die nicht TEI-konforme Schachtelung von `<subst>` in `<subst>`.

```
Der Antrag <subst hand="#D_000001-001-000-hand01">
<del>ist alt</del>
<add>
  <subst>
    <del>war</del>
    <add>ist</add>
  </subst> neu</add>
</subst>.
```

Leerstellen werden mit `<gap>` gekennzeichnet. Der Grund für die Leerstelle in der digitalen Edition wird in *reason* angegeben. Als Attributwerte stehen cancelled (abgebrochen), deleted (getilgt), editorial (aus editorischen Gründen nicht übertragen) und illegible (unleserlich) zur Auswahl. Im Attribut *extent* kann das Ausmaß der Leerstelle dokumentiert werden. Die Werte sind in diesem Fall nicht klar definiert, da beispielsweise several-characters neben three-words oder one-line vorkommen kann.

```
Dieser Antrag <gap reason="illegible" extent="1-word"/> neu.
```

Komplexe Korrekturen werden mit Hilfe eines Pointers annotiert. Haben wir beispielsweise den Satzausschnitt "dessen Besprechung über das Kriegsmanifest" vorliegen, wobei "Besprechung über das" nachträglich durchgestrichen und mit der handschriftlichen Einfügung "Kritik an dessen Stelle" ersetzt wurde, hier aber wieder "Kritik an dessen" getilgt und die Streichung von "über das" zurückgenommen wurde, können wir den Ausschnitt wie folgt kodieren:

```
<p>dessen <subst>
  <del hand="#A" seq="1">Besprechung
  <restore xml:id="XY" hand="#A" seq="3">über
    das</restore>
  </del>
  <del hand="#A" seq="2">
    <add hand="#A" seq="1">Kritik an dem</add>
  </del>
  <add hand="#A" seq="2">Stelle</add>
</subst>
<ptr target="#XY" type="transposition"/> Kriegsmanifest</p>
```

Handelt es sich zwar um keine handschriftliche Korrektur, jedoch sehr wohl um eine handschriftliche Notiz, dann wird diese mit `<note>` und einem Verweis auf die entsprechende Schreiberhand mittels *hand* ausgezeichnet.

```
<note hand="#D_000001-001-000-hand01">Der Antrag liegt nicht vor.</note>
```

## 7. Annotation und semantische Erschließung

### 7.1. Verweise auf Entitäten

Gewisse Entitäten im `<body>` werden mittels `<rs>` und entsprechenden *type*-Attributwerten ausgezeichnet. person wird für die Verlinkung von Personen herangezogen, institution für jene von Institutionen. Orte werden mit place kodiert, Werke mit work und Gesetzestexte mit law. Bei `<rs>` mit dem *type* work gibt es ferner Untergruppen in Form von *subtype* mit den möglichen Werten pmb (für 'Werke' in der PMB), fackel (für 'Werke' aus der "Fackel") und legal-doc (für 'Werke', die sich im Korpus der Rechtsakten-Edition befinden). Adressen erhalten sowohl place als auch *subtype* mit dem Wert address. Schachtelungen von `<rs>` sind möglich.

```
<rs type="work" ref="#53851">Der Wiener Tag</rs>
```

Durch das *ref*-Attribut wird die Entität außerdem mit dem entsprechenden Datensatz in der PMB bzw. der "Fackel", dem entsprechenden Dokument in den Rechtsakten oder ALEX verlinkt.

Personal- und Possessivpronomen werden nicht ausgezeichnet. Ausschlaggebend sind Namen bzw. Substantive. Ebenso nicht näher bestimmt werden Namen literarischer Figuren.

Im `<body>` selbst sind also alle erwähnten Personen und Institutionen ausgezeichnet. In die `<particDesc>` werden jedoch nur die zentral beteiligten übernommen.

## 7.2. Zitate, wörtliche Reden

Zitate werden mit `<quote>` ausgezeichnet, insofern sie in Anführungszeichen stehen. Diese wurden im Zuge der Transkription normalisiert. Die `<quote>`-Elemente erhalten eine `xml:id` sowie einen Verweis auf den Ursprung des Zitats mittels `source`.

```
„<quote xml:id="uuid_3ddb9d-2d25-4017-a98b-44dbc216608c"
source="https://fackel.oeaw.ac.at/E/908,007">groteske Bemerkung</quote>“
```

Handelt es sich um eine wörtliche Rede, so wird das Element `<q>` mit dem Attribut `type` und dem Wert `spoken` herangezogen. Ist der die Sprecher\_in der Aussage identifizierbar, wird sie mit dem `who`-Attribut verlinkt.

```
„<q type="spoken" who="#38909">hineingebracht</q>“
```

## 7.3. Notizen

Das Element `<note>` wird nicht nur in der `<correspDesc>` für die Auszeichnung von Diktatsiglen und Betreffen herangezogen, sondern, wie schon erwähnt, auch für Marginalien. Darüber hinaus werden Notizen der Kanzlei Oskar Samek mit `<note>`, dem Attribut `type` mit dem Wert `paratext` und dem Attribut `resp` mit dem Wert `law-firm` verzeichnet.

```
<note type="paratext" resp="law-firm">Betrifft: <rs type="person" ref="#11988">Kraus</rs> - <rs type="person" ref="#11910">Kerr</rs>
<lb xml:id="uuid_fba404e0-86b9-42fb-a404-e086b9a2fb21">/>expediert am 3. Jänner 1927.
</note>
```

## 8. IDs

IDs bzw. Identifier werden wie folgt vergeben:

Die Dokumente selbst erhalten eine ID in der Form `D_XXXXXX-XXX-XXX.xml`, wobei die erste Ziffernkombination den Fall bezeichnet (vgl. die IDs für Fälle in der Form `C_XXXXX`), die zweite das Dokument und die dritte gegebenenfalls eine Beilage.

```
<TEI xml:base="https://id.acdh.oeaw.ac.at/legalkraus"
xml:id="D_000112-029-000.xml"
prev="https://id.acdh.oeaw.ac.at/legalkraus/D_000112-028-000.xml"
next="https://id.acdh.oeaw.ac.at/legalkraus/D_000112-030-000.xml" xmlns="http://www.tei-c.org/ns/1.0"/>
```

Als Attribute des Elements `<TEI>` werden außerdem die `xml:base`, der Namespace (`xmlns`, im Beispiel nicht vorhanden) sowie `prev` und `next` angeführt. Letztere Attribute verweisen auf das vorangehende sowie das folgende Dokument.

`<witness>`-Elemente, also Textzeugen, bekommen eine ID in der Form `D_XXXXXX-XXX-XXX-witxx`. Der ID des Dokuments wird also "witxx" hinzugefügt.

```
<witness xml:id="D_000002-002-000-wit01"
facs="#D_000002-002-000-facs001"/>
```

Die IDs der `<facsimile>`-Elemente ergibt sich ebenso aus der ID des Dokuments und einem Zusatz in der Form "facsxxx". Dieser ID wird noch ein weiterer Zusatz in der Form "lxxx" für `<surfaceGrp>`-Elemente hinzugefügt. Für die ID eines `<surface>`-Elements wird die ID der `<surfaceGrp>` noch einmal erweitert um "pxxx".

```
<facsimile xml:id="D_000002-002-000-facs001">
<surfaceGrp xml:id="D_000002-002-000-facs001-1001">
<surface xml:id="D_000002-002-000-facs001-1001-p001"
type="recto">
<graphic url="http://www.kraus.wienbibliothek.at/sites/biographeme.com/files/images/object/00000019.jpg"
source="krausonline"/>
<graphic url="ZPH_1545-1/001_010/00000019.jpg"
source="scans"/>
<graphic url="https://www.digital.wienbibliothek.at/wbrobv02/i3f/v21/2540028/full/full/0/default.jpg"
source="wienbibliothek" ana="status:checked"/>
</surface>
<surface xml:id="D_000002-002-000-facs001-1001-p002"
type="recto">
<graphic url="http://www.kraus.wienbibliothek.at/sites/biographeme.com/files/images/object/00000021.jpg"
source="krausonline"/>
<graphic url="ZPH_1545-1/001_010/00000021.jpg"
source="scans"/>
<graphic url="https://www.digital.wienbibliothek.at/wbrobv02/i3f/v21/2540030/full/full/0/default.jpg"
source="wienbibliothek" ana="status:checked"/>
</surface>
</surfaceGrp>
</facsimile>
```

Folgende Elemente erhalten UUIDs: `<p>`, `<pb>` (zusätzlich zur Seitenzählung in `n`), `<lb>`, `<quote>` und `<stamp>`.

```
<p xml:id="uuid_3e3c19ee-b10e-4d0b-95fb-0ccf3db0dc3a">
<lb xml:id="uuid_cb24b124-dde5-4621-a4b1-24dde5762193"/>In vorzüglicher Hochachtung
```

&lt;/p&gt;

## 9. TEI-Modifikation

### 9.1. Elements

#### 9.1.1. <TEI>

<p>&lt;TEI&gt; (TEI document) contains a single TEI-conformant document, combining a single TEI header with one or more members of the <code>model.resource</code> class. Multiple &lt;TEI&gt; elements may be combined within a &lt;TEI&gt; (or &lt;teiCorpus&gt;) element. [4. Default Text Structure 15.1. Varieties of Composite Text]</p>	
<b>Module</b>	textstructure
<b>Attributes</b>	<p>Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.typed</u> (@type, @subtype)</p> <p><b>version</b> specifies the version number of the TEI Guidelines against which this document is valid.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.version</u></p> <p><b>Note</b> Major editions of the Guidelines have long been informally referred to by a name made up of the letter P (for Proposal) followed by a digit. The current release is one of the many releases of the fifth major edition of the Guidelines, known as P5. This attribute may be used to associate a TEI document with a specific release of the P5 Guidelines, in the absence of a more precise association provided by the <i>source</i> attribute on the associated &lt;schemaSpec&gt;.</p>
<b>Contained by</b>	textstructure: <u>TEI</u>
<b>May contain</b>	<p><b>header:</b> <u>teiHeader</u></p> <p><b>textstructure:</b> <u>TEI text</u></p> <p><b>transcr:</b> <u>facsimile</u></p>
<b>Note</b>	This element is required. It is customary to specify the TEI namespace <code>http://www.tei-c.org/ns/1.0</code> on it, using the <i>xmlns</i> attribute.
<b>Example</b>	<pre>&lt;TEI version="3.3.0" xmlns="http://www.tei-c.org/ns/1.0"&gt;   &lt;teiHeader&gt;     &lt;fileDesc&gt;       &lt;titleStmt&gt;         &lt;title&gt;The shortest TEI Document Imaginable&lt;/title&gt;       &lt;/titleStmt&gt;       &lt;publicationStmt&gt;         &lt;p&gt;First published as part of TEI P2, this is the P5           version using a name space.&lt;/p&gt;       &lt;/publicationStmt&gt;       &lt;sourceDesc&gt;         &lt;p&gt;No source: this is an original work.&lt;/p&gt;       &lt;/sourceDesc&gt;     &lt;/fileDesc&gt;   &lt;/teiHeader&gt;   &lt;text&gt;     &lt;body&gt;       &lt;p&gt;This is about the shortest TEI document imaginable.&lt;/p&gt;     &lt;/body&gt;   &lt;/text&gt; &lt;/TEI&gt;</pre>
<b>Example</b>	<pre>&lt;TEI version="2.9.1" xmlns="http://www.tei-c.org/ns/1.0"&gt;   &lt;teiHeader&gt;     &lt;fileDesc&gt;       &lt;titleStmt&gt;         &lt;title&gt;A TEI Document containing four page images &lt;/title&gt;       &lt;/titleStmt&gt;       &lt;publicationStmt&gt;         &lt;p&gt;Unpublished demonstration file.&lt;/p&gt;       &lt;/publicationStmt&gt;       &lt;sourceDesc&gt;</pre>

	<pre>         &lt;p&gt;No source: this is an original work.&lt;/p&gt;       &lt;/sourceDesc&gt;     &lt;/fileDesc&gt;   &lt;/teiHeader&gt;   &lt;facsimile&gt;     &lt;graphic url="page1.png"/&gt;     &lt;graphic url="page2.png"/&gt;     &lt;graphic url="page3.png"/&gt;     &lt;graphic url="page4.png"/&gt;   &lt;/facsimile&gt; &lt;/TEI&gt; </pre>
<b>Schematron</b>	<pre> &lt;sch:ns prefix="tei" uri="http://www.tei-c.org/ns/1.0"/&gt; &lt;sch:ns prefix="xs" uri="http://www.w3.org/2001/XMLSchema"/&gt; </pre>
<b>Schematron</b>	<pre> &lt;sch:ns prefix="rng" uri="http://relaxng.org/ns/structure/1.0"/&gt; </pre>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;sequence&gt;     &lt;elementRef key="teiHeader"/&gt;   &lt;/sequence&gt;   &lt;alternate&gt;     &lt;sequence&gt;       &lt;classRef key="model.resource"         minOccurs="1" maxOccurs="unbounded"/&gt;       &lt;elementRef key="TEI" minOccurs="0"         maxOccurs="unbounded"/&gt;     &lt;/sequence&gt;     &lt;elementRef key="TEI" minOccurs="1"       maxOccurs="unbounded"/&gt;   &lt;/alternate&gt; &lt;/sequence&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element TEI {   att.global.attributes,   att.typed.attributes,   attribute version { text }?,   ( teiHeader, ( ( model.resource+, TEI* )   TEI+ ) ) } </pre>

### 9.1.2. <ab>

<p><b>&lt;ab&gt;</b> (anonymous block) contains any arbitrary component-level unit of text, acting as an anonymous container for phrase or inter level elements analogous to, but without the semantic baggage of, a paragraph. [16.3. Blocks, Segments, and Anchors]</p>	
<b>Module</b>	linking
<b>Attributes</b>	<p>Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.typed</u> (@type, @subtype) <u>att.declaring</u> (@decls) <u>att.fragmentable</u> (@part) <u>att.written</u> (@hand)</p>

<b>Note</b>	<p>In a diplomatic edition attempting to represent an original source, the &lt;add&gt; element should not be used for additions to the current TEI electronic edition made by editors or encoders. In these cases, either the &lt;corr&gt; or &lt;supplied&gt; element are recommended.</p> <p>In a TEI edition of a historical text with previous editorial emendations in which such additions or reconstructions are considered part of the source text, the use of &lt;add&gt; may be appropriate, dependent on the editorial philosophy of the project.</p>
<b>Example</b>	<pre>The story I am going to relate is true as to its main facts, and as to the consequences &lt;add place="above"&gt;of these facts&lt;/add&gt; from which this tale takes its title.</pre>
<b>Content model</b>	<pre>&lt;content&gt;   &lt;macroRef key="macro.paraContent"/&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element add {   att.global.attributes,   att.transcriptional.attributes,</pre>

	<pre> att.placement.attributes, att.typed.attributes, att.dimensions.attributes, macro.paraContent } </pre>
--	---

### 9.1.5. <address>

<b>&lt;address&gt;</b> (address) contains a postal address, for example of a publisher, an organization, or an individual. [3.6.2. Addresses 2.2.4. Publication, Distribution, Licensing, etc. 3.12.2.4. Imprint, Size of a Document, and Reprint Information]	
<b>Module</b>	core
<b>Attributes</b>	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source))
<b>Member of</b>	<a href="#">model.addressLike</a> <a href="#">model.publicationStmtPart.detail</a>
<b>Contained by</b>	<b>analysis:</b> <a href="#">cl</a> <a href="#">phr</a> <a href="#">s</a> <a href="#">span</a> <b>core:</b> <a href="#">add</a> <a href="#">date</a> <a href="#">del</a> <a href="#">editor</a> <a href="#">hi</a> <a href="#">name</a> <a href="#">note</a> <a href="#">p</a> <a href="#">pubPlace</a> <a href="#">publisher</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">rs</a> <a href="#">street</a> <a href="#">term</a> <a href="#">title</a> <b>header:</b> <a href="#">change</a> <a href="#">classCode</a> <a href="#">correspAction</a> <a href="#">creation</a> <a href="#">handNote</a> <a href="#">language</a> <a href="#">licence</a> <a href="#">publicationStmt</a> <b>linking:</b> <a href="#">ab</a> <a href="#">seg</a> <b>msdescription:</b> <a href="#">accMat</a> <a href="#">objectType</a> <a href="#">stamp</a> <b>namesdates:</b> <a href="#">country</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">roleName</a> <a href="#">settlement</a> <b>textcrit:</b> <a href="#">lem</a> <a href="#">rdg</a> <a href="#">witness</a> <b>transcr:</b> <a href="#">metamark</a> <a href="#">restore</a>
<b>May contain</b>	<b>analysis:</b> <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">span</a> <a href="#">spanGrp</a> <b>core:</b> <a href="#">gap</a> <a href="#">lb</a> <a href="#">name</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">pb</a> <a href="#">postCode</a> <a href="#">rs</a> <a href="#">street</a> <b>header:</b> <a href="#">idno</a> <b>namesdates:</b> <a href="#">country</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">roleName</a> <a href="#">settlement</a> <b>textcrit:</b> <a href="#">app</a> <b>transcr:</b> <a href="#">listTranspose</a> <a href="#">metamark</a>
<b>Note</b>	This element should be used for postal addresses only. Within it, the generic element <addrLine> may be used as an alternative to any of the more specialized elements available from the <a href="#">model.addrPart</a> class, such as <street>, <postCode> etc.
<b>Example</b>	<p>Using just the elements defined by the core module, an address could be represented as follows:</p> <pre> &lt;address&gt;   &lt;street&gt;via Marsala 24&lt;/street&gt;   &lt;postCode&gt;40126&lt;/postCode&gt;   &lt;name&gt;Bologna&lt;/name&gt;   &lt;name&gt;Italy&lt;/name&gt; &lt;/address&gt; </pre>
<b>Example</b>	<p>When a schema includes the names and dates module more specific elements such as <a href="#">country</a> or <a href="#">settlement</a> would be preferable over generic &lt;name&gt;:</p> <pre> &lt;address&gt;   &lt;street&gt;via Marsala 24&lt;/street&gt;   &lt;postCode&gt;40126&lt;/postCode&gt;   &lt;settlement&gt;Bologna&lt;/settlement&gt;   &lt;country&gt;Italy&lt;/country&gt; &lt;/address&gt; </pre>
<b>Example</b>	<pre> &lt;address&gt;   &lt;addrLine&gt;Computing Center, MC 135&lt;/addrLine&gt;   &lt;addrLine&gt;P.O. Box 6998&lt;/addrLine&gt;   &lt;addrLine&gt;Chicago, IL 60680&lt;/addrLine&gt;   &lt;addrLine&gt;USA&lt;/addrLine&gt; &lt;/address&gt; </pre>
<b>Example</b>	<pre> &lt;address&gt;   &lt;country key="FR"/&gt;   &lt;settlement type="city"&gt;Lyon&lt;/settlement&gt;   &lt;postCode&gt;69002&lt;/postCode&gt;   &lt;district type="arrondissement"&gt;IIème&lt;/district&gt;   &lt;district type="quartier"&gt;Perrache&lt;/district&gt;   &lt;street&gt;     &lt;num&gt;30&lt;/num&gt;, Cours de Verdun&lt;/street&gt; &lt;/address&gt; </pre>

<b>Content model</b>	<pre> &lt;content&gt;   &lt;sequence&gt;     &lt;classRef key="model.global"       minOccurs="0" maxOccurs="unbounded" /&gt;     &lt;sequence minOccurs="1"       maxOccurs="unbounded"&gt;       &lt;classRef key="model.addrPart" /&gt;       &lt;classRef key="model.global"         minOccurs="0" maxOccurs="unbounded" /&gt;     &lt;/sequence&gt;   &lt;/sequence&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element address {   att.global.attributes,   ( model.global*, ( model.addrPart, model.global* )+ ) } </pre>

### 9.1.6. <app>

<app> (apparatus entry) contains one entry in a critical apparatus, with an optional lemma and usually one or more readings or notes on the relevant passage. [12.1.1. The Apparatus Entry]

<b>Module</b>	textcrit
<b>Attributes</b>	<p>Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.typed</u> (type, @subtype)</p> <p><b>type</b> classifies the variation contained in this element according to some convenient typology.  <b>Derived from</b> <u>att.typed</u>  <b>Status</b> Optional  <b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>from</b> identifies the beginning of the lemma in the base text.  <b>Status</b> Optional  <b>Datatype</b> <u>teidata.pointer</u>  <b>Note</b> This attribute should be used when either the double-end point method of apparatus markup, or the location-referenced method with a URL rather than canonical reference, are used.</p> <p><b>to</b> identifies the endpoint of the lemma in the base text.  <b>Status</b> Optional  <b>Datatype</b> <u>teidata.pointer</u>  <b>Note</b> This attribute is only used when the double-end point method of apparatus markup is used, when the encoded apparatus is not embedded <i>in-line</i> in the base-text.</p> <p><b>loc</b> (location) indicates the location of the variation, when the location-referenced method of apparatus markup is used.  <b>Status</b> Optional  <b>Datatype</b> 1-# occurrences of <u>teidata.word</u> separated by whitespace  <b>Note</b> This attribute is used only when the location-referenced encoding method is used. It supplies a string containing a canonical reference for the passage to which the variation applies.</p>

<b>Content model</b>	<pre> &lt;content&gt; &lt;sequence&gt; &lt;classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/&gt; &lt;sequence minOccurs="0"&gt; &lt;classRef key="model.divTop"/&gt; &lt;alternate minOccurs="0" maxOccurs="unbounded"&gt; &lt;classRef key="model.global"/&gt; &lt;classRef key="model.divTop"/&gt; &lt;/alternate&gt; &lt;/sequence&gt; &lt;sequence minOccurs="0"&gt; &lt;classRef key="model.divGenLike"/&gt; &lt;alternate minOccurs="0" maxOccurs="unbounded"&gt; &lt;classRef key="model.global"/&gt; &lt;classRef key="model.divGenLike"/&gt; &lt;/alternate&gt; &lt;/sequence&gt; &lt;alternate&gt; &lt;sequence minOccurs="1" maxOccurs="unbounded"&gt; &lt;classRef key="model.divLike"/&gt; &lt;alternate minOccurs="0" maxOccurs="unbounded"&gt; &lt;classRef key="model.global"/&gt; &lt;classRef key="model.divGenLike"/&gt; &lt;/alternate&gt; &lt;/sequence&gt; &lt;sequence minOccurs="1" maxOccurs="unbounded"&gt; &lt;classRef key="model.div1Like"/&gt; &lt;alternate minOccurs="0" maxOccurs="unbounded"&gt; &lt;classRef key="model.global"/&gt; &lt;classRef key="model.divGenLike"/&gt; &lt;/alternate&gt; &lt;/sequence&gt; &lt;sequence&gt; &lt;sequence minOccurs="1" maxOccurs="unbounded"&gt; &lt;classRef key="model.common"/&gt; &lt;classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/&gt; &lt;/sequence&gt; </pre>

	<pre> &lt;alternate minOccurs="0"&gt;   &lt;sequence minOccurs="1"     maxOccurs="unbounded"&gt;     &lt;classRef key="model.divLike"/&gt;     &lt;alternate minOccurs="0"       maxOccurs="unbounded"&gt;       &lt;classRef key="model.global"/&gt;       &lt;classRef key="model.divGenLike"/&gt;     &lt;/alternate&gt;   &lt;/sequence&gt;   &lt;sequence minOccurs="1"     maxOccurs="unbounded"&gt;     &lt;classRef key="model.div1Like"/&gt;     &lt;alternate minOccurs="0"       maxOccurs="unbounded"&gt;       &lt;classRef key="model.global"/&gt;       &lt;classRef key="model.divGenLike"/&gt;     &lt;/alternate&gt;   &lt;/sequence&gt; &lt;/alternate&gt; &lt;/sequence&gt; &lt;sequence minOccurs="0"   maxOccurs="unbounded"&gt;   &lt;classRef key="model.divBottom"/&gt;   &lt;classRef key="model.global"     minOccurs="0" maxOccurs="unbounded"/&gt; &lt;/sequence&gt; &lt;/sequence&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element body {   att.global.attributes,   att.declaring.attributes,   (     model.global*,     ( model.divTop, ( model.global   model.divTop )* )?,     ( model.divGenLike, ( model.global   model.divGenLike )* )?,     (       ( model.divLike, ( model.global   model.divGenLike )* )+         ( model.div1Like, ( model.global   model.divGenLike )* )+         (           ( model.common, model.global* )+,           (             ( model.divLike, ( model.global   model.divGenLike )* )+               ( model.div1Like, ( model.global   model.divGenLike )* )+           )?         )       ),     ( model.divBottom, model.global* )*   ) } </pre>

### 9.1.9. <c>

<c> (character) represents a character. [17.1. Linguistic Segment Categories]	
<b>Module</b>	analysis
<b>Attributes</b>	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source)) <a href="#">att.segLike</a> (@function) ( <a href="#">att.datcat</a> (@datcat, @valueDatcat)) ( <a href="#">att.fragmentable</a> (@part)) <a href="#">att.typed</a> (@type, @subtype) <a href="#">att.notated</a> (@notation)
<b>Member of</b>	<a href="#">model.segLike</a>
<b>Contained by</b>	<b>analysis:</b> <a href="#">cl</a> <a href="#">m</a> <a href="#">pc</a> <a href="#">phr</a> <a href="#">s</a> <a href="#">w</a> <b>core:</b> <a href="#">add</a> <a href="#">date</a> <a href="#">del</a> <a href="#">editor</a> <a href="#">hi</a> <a href="#">name</a> <a href="#">note</a> <a href="#">p</a> <a href="#">pubPlace</a> <a href="#">publisher</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">rs</a> <a href="#">street</a> <a href="#">term</a> <a href="#">title</a> <b>header:</b> <a href="#">change</a> <a href="#">handNote</a> <a href="#">licence</a> <b>linking:</b> <a href="#">ab</a> <a href="#">seg</a> <b>msdescription:</b> <a href="#">accMat</a> <a href="#">objectType</a> <a href="#">stamp</a> <b>namesdates:</b> <a href="#">country</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">roleName</a> <a href="#">settlement</a> <b>textcrit:</b> <a href="#">lem</a> <a href="#">rdg</a> <b>transcr:</b> <a href="#">metamark</a> <a href="#">restore</a>
<b>May contain</b>	Character data only

<b>Note</b>	Contains a single character, a <g> element, or a sequence of graphemes to be treated as a single character. The <i>type</i> attribute is used to indicate the function of this segmentation, taking values such as letter, punctuation, or digit etc.
<b>Example</b>	<pre>&lt;phr&gt; &lt;c&gt;M&lt;/c&gt; &lt;c&gt;O&lt;/c&gt; &lt;c&gt;A&lt;/c&gt; &lt;c&gt;I&lt;/c&gt; &lt;w&gt;doth&lt;/w&gt; &lt;w&gt;sway&lt;/w&gt; &lt;w&gt;my&lt;/w&gt; &lt;w&gt;life&lt;/w&gt; &lt;/phr&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt; &lt;macroRef key="macro.xtext"/&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element c {   att.global.attributes,   att.segLike.attributes,   att.typed.attributes,   att.notated.attributes,   macro.xtext }</pre>

### 9.1.10. <change>

<change> (change) documents a change or set of changes made during the production of a source document, or during the revision of an electronic file. [2.6. The Revision Description 2.4.1. Creation 11.7. Identifying Changes and Revisions]	
<b>Module</b>	header
<b>Attributes</b>	<p>Attributes <u>att.ascribed</u> (@who) <u>att.dateable</u> (@calendar, @period) (<u>att.dateable.w3c</u> (@when, @notBefore, @notAfter, @from, @to)) (<u>att.dateable.iso</u> (@when-iso, @notBefore-iso, @notAfter-iso, @from-iso, @to-iso)) (<u>att.dateable.custom</u> (@when-custom, @notBefore-custom, @notAfter-custom, @from-custom, @to-custom, @datingPoint, @datingMethod)) <u>att.docStatus</u> (@status) <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.typed</u> (@type, @subtype)</p> <p><b>target</b> (target) points to one or more elements that belong to this change.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p>
<b>Contained by</b>	<b>header:</b> <u>revisionDesc</u>
<b>May contain</b>	<p><b>analysis:</b> <u>c</u> <u>cl</u> <u>interp</u> <u>interpGrp</u> <u>m</u> <u>pc</u> <u>phr</u> <u>s</u> <u>span</u> <u>spanGrp</u> <u>w</u></p> <p><b>core:</b> <u>add</u> <u>address</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>p</u> <u>pb</u> <u>ptr</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>term</u> <u>title</u></p> <p><b>header:</b> <u>idno</u></p> <p><b>linking:</b> <u>ab</u> <u>seg</u></p> <p><b>msdescription:</b> <u>objectType</u> <u>stamp</u></p> <p><b>namesdates:</b> <u>country</u> <u>listOrg</u> <u>listPerson</u> <u>orgName</u> <u>persName</u> <u>roleName</u> <u>settlement</u></p> <p><b>textcrit:</b> <u>app</u> <u>listWit</u></p> <p><b>transcr:</b> <u>listTranspose</u> <u>metamark</u> <u>restore</u> <u>subst</u></p> <p>character data</p>
<b>Note</b>	<p>The <i>who</i> attribute may be used to point to any other element, but will typically specify a &lt;respStmt&gt; or &lt;person&gt; element elsewhere in the header, identifying the person responsible for the change and their role in making it.</p> <p>It is recommended that changes be recorded with the most recent first. The <i>status</i> attribute may be used to indicate the status of a document following the change documented.</p>
<b>Example</b>	<pre>&lt;titleStmt&gt; &lt;title&gt; ... &lt;/title&gt; &lt;editor xml:id="LDB"&gt;Lou Burnard&lt;/editor&gt; &lt;respStmt xml:id="BZ"&gt;</pre>

	<pre> &lt;resp&gt;copy editing&lt;/resp&gt; &lt;name&gt;Brett Zamir&lt;/name&gt; &lt;/respStmt&gt; &lt;/titleStmt&gt; &lt;!-- ... --&gt; &lt;revisionDesc status="published"&gt;   &lt;change who="#BZ" when="2008-02-02"     status="public"&gt;Finished chapter 23&lt;/change&gt;   &lt;change who="#BZ" when="2008-01-02"     status="draft"&gt;Finished chapter 2&lt;/change&gt;   &lt;change n="P2.2" when="1991-12-21"     who="#LDB"&gt;Added examples to section 3&lt;/change&gt;   &lt;change when="1991-11-11" who="#MSM"&gt;Deleted chapter 10&lt;/change&gt; &lt;/revisionDesc&gt; </pre>
<b>Example</b>	<pre> &lt;profileDesc&gt;   &lt;creation&gt;     &lt;listChange&gt;       &lt;change xml:id="DRAFT1"&gt;First draft in pencil&lt;/change&gt;       &lt;change xml:id="DRAFT2"         notBefore="1880-12-09"&gt;First revision, mostly           using green ink&lt;/change&gt;       &lt;change xml:id="DRAFT3"         notBefore="1881-02-13"&gt;Final corrections as           supplied to printer.&lt;/change&gt;     &lt;/listChange&gt;   &lt;/creation&gt; &lt;/profileDesc&gt; </pre>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;macroRef key="macro.specialPara"/&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element change {   att.ascribed.attributes,   att.dateable.attributes,   att.docStatus.attributes,   att.global.attributes,   att.typed.attributes,   attribute target { list { + } }?,   macro.specialPara } </pre>

### 9.1.11. <cl>

<cl> (clause) represents a grammatical clause. [17.1. Linguistic Segment Categories]	
<b>Module</b>	analysis
<b>Attributes</b>	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source)) <a href="#">att.segLike</a> (@function) ( <a href="#">att.datcat</a> (@datcat, @valueDatcat)) ( <a href="#">att.fragmentable</a> (@part)) <a href="#">att.typed</a> (@type, @subtype) <a href="#">att.notated</a> (@notation)
<b>Member of</b>	<a href="#">model.segLike</a>
<b>Contained by</b>	<b>analysis:</b> <a href="#">cl</a> <a href="#">phr</a> <a href="#">s</a> <b>core:</b> <a href="#">add</a> <a href="#">date</a> <a href="#">del</a> <a href="#">editor</a> <a href="#">hi</a> <a href="#">name</a> <a href="#">note</a> <a href="#">p</a> <a href="#">pubPlace</a> <a href="#">publisher</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">rs</a> <a href="#">street</a> <a href="#">term</a> <a href="#">title</a> <b>header:</b> <a href="#">change</a> <a href="#">handNote</a> <a href="#">licence</a> <b>linking:</b> <a href="#">ab</a> <a href="#">seg</a> <b>msdescription:</b> <a href="#">accMat</a> <a href="#">objectType</a> <a href="#">stamp</a> <b>namesdates:</b> <a href="#">country</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">roleName</a> <a href="#">settlement</a> <b>textcrit:</b> <a href="#">lem</a> <a href="#">rdg</a> <b>transcr:</b> <a href="#">metamark</a> <a href="#">restore</a>
<b>May contain</b>	<b>analysis:</b> <a href="#">c</a> <a href="#">cl</a> <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">m</a> <a href="#">pc</a> <a href="#">phr</a> <a href="#">s</a> <a href="#">span</a> <a href="#">spanGrp</a> <a href="#">w</a> <b>core:</b> <a href="#">add</a> <a href="#">address</a> <a href="#">date</a> <a href="#">del</a> <a href="#">gap</a> <a href="#">graphic</a> <a href="#">hi</a> <a href="#">lb</a> <a href="#">name</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">pb</a> <a href="#">ptr</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">rs</a> <a href="#">term</a> <a href="#">title</a> <b>header:</b> <a href="#">idno</a> <b>linking:</b> <a href="#">seg</a> <b>msdescription:</b> <a href="#">objectType</a> <a href="#">stamp</a> <b>namesdates:</b> <a href="#">country</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">roleName</a> <a href="#">settlement</a> <b>textcrit:</b> <a href="#">app</a>

	<b>transcr:</b> <u>listTranspose</u> <u>metamark</u> <u>restore</u> <u>subst</u> character data
<b>Note</b>	The <i>type</i> attribute may be used to indicate the type of clause, taking values such as finite, nonfinite, declarative, interrogative, relative etc. as appropriate.
<b>Example</b>	<pre>&lt;cl type="relative"   function="clause_modifier"&gt;Which frightened   both the heroes so,&lt;cl&gt;They quite forgot their quarrel.&lt;/cl&gt; &lt;/cl&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt;   &lt;macroRef key="macro.phraseSeq"/&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element cl {   att.global.attributes,   att.segLike.attributes,   att.typed.attributes,   att.notated.attributes,   macro.phraseSeq }</pre>

### 9.1.12. <classCode>

<classCode> (classification code) contains the classification code used for this text in some standard classification system. [2.4.3. The Text Classification]	
<b>Module</b>	header
<b>Attributes</b>	<p>Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source))</p> <p>scheme identifies the classification system in use, as defined by, e.g. a &lt;taxonomy&gt; element, or some other resource.</p> <p><b>Status</b> Required</p> <p><b>Datatype</b> <u>teidata.pointer</u></p>
<b>Contained by</b>	<b>header:</b> <u>textClass</u>
<b>May contain</b>	<p><b>analysis:</b> <u>interp</u> <u>interpGrp</u> <u>span</u> <u>spanGrp</u></p> <p><b>core:</b> <u>address</u> <u>date</u> <u>gap</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>pb</u> <u>ptr</u> <u>q</u> <u>ref</u> <u>rs</u> <u>term</u> <u>title</u></p> <p><b>header:</b> <u>idno</u></p> <p><b>msdescription:</b> <u>objectType</u> <u>stamp</u></p> <p><b>namesdates:</b> <u>country</u> <u>orgName</u> <u>persName</u> <u>roleName</u> <u>settlement</u></p> <p><b>textcrit:</b> <u>app</u></p> <p><b>transcr:</b> <u>listTranspose</u> <u>metamark</u> <u>subst</u> character data</p>
<b>Example</b>	<pre>&lt;classCode scheme="http://www.udc.org"&gt;410&lt;/classCode&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt;   &lt;macroRef key="macro.phraseSeq.limited"/&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element classCode {   att.global.attributes,   attribute scheme { text },   macro.phraseSeq.limited }</pre>

### 9.1.13. <correspAction>

<correspAction> (correspondence action) contains a structured description of the place, the name of a person/organization and the date related to the sending/receiving of a message or any other action related to the correspondence. [2.4.6. Correspondence Description]
---

<b>Module</b>	header

### 9.1.18. <del>

**<del>** (deletion) contains a letter, word, or passage deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, or a previous annotator or corrector. [3.5.3. Additions, Deletions, and Omissions]

<b>Module</b>	core
<b>Attributes</b>	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <u>att.global.rendition</u> (@rend, @style, @rendition)) ( <u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <u>att.global.analytic</u> (@ana)) ( <u>att.global.facs</u> (@facs)) ( <u>att.global.change</u> (@change)) ( <u>att.global.responsibility</u> (@cert, @resp)) ( <u>att.global.source</u> (@source)) <u>att.transcriptional</u> (@status, @cause, @seq) ( <u>att.editLike</u> (@evidence, @instant)) ( <u>att.written</u> (@hand)) <u>att.typed</u> (@type, @subtype) <u>att.dimensions</u> (@unit, @quantity, @extent, @precision, @scope) ( <u>att.ranging</u> (@atLeast, @atMost, @min, @max, @confidence))
<b>Member of</b>	<u>model.pPart.transcriptional</u>
<b>Contained by</b>	<b>analysis:</b> <u>cl</u> <u>pc</u> <u>phr</u> <u>s</u> <u>w</u> <b>core:</b> <u>add</u> <u>date</u> <u>del</u> <u>editor</u> <u>hi</u> <u>name</u> <u>note</u> <u>p</u> <u>pubPlace</u> <u>publisher</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>street</u> <u>term</u> <u>title</u> <b>header:</b> <u>change</u> <u>handNote</u> <u>licence</u> <b>linking:</b> <u>ab</u> <u>seg</u> <b>msdescription:</b> <u>accMat</u> <u>objectType</u> <u>stamp</u> <b>namesdates:</b> <u>country</u> <u>orgName</u> <u>persName</u> <u>roleName</u> <u>settlement</u> <b>textcrit:</b> <u>lem</u> <u>rdg</u> <b>transcr:</b> <u>metamark</u> <u>restore</u> <u>subst</u>
<b>May contain</b>	<b>analysis:</b> <u>c</u> <u>cl</u> <u>interp</u> <u>interpGrp</u> <u>m</u> <u>pc</u> <u>phr</u> <u>s</u> <u>span</u> <u>spanGrp</u> <u>w</u> <b>core:</b> <u>add</u> <u>address</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>pb</u> <u>ptr</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>term</u> <u>title</u> <b>header:</b> <u>idno</u> <b>linking:</b> <u>seg</u> <b>msdescription:</b> <u>objectType</u> <u>stamp</u> <b>namesdates:</b> <u>country</u> <u>listOrg</u> <u>listPerson</u> <u>orgName</u> <u>persName</u> <u>roleName</u> <u>settlement</u> <b>textcrit:</b> <u>app</u> <u>listWit</u> <b>transcr:</b> <u>listTranspose</u> <u>metamark</u> <u>restore</u> <u>subst</u> character data
<b>Note</b>	This element should be used for deletion of shorter sequences of text, typically single words or phrases. The <code>&lt;delSpan&gt;</code> element should be used for longer sequences of text, for those

	<p>containing structural subdivisions, and for those containing overlapping additions and deletions.</p> <p>The text deleted must be at least partially legible in order for the encoder to be able to transcribe it (unless it is restored in a &lt;supplied&gt; tag). Illegible or lost text within a deletion may be marked using the &lt;gap&gt; tag to signal that text is present but has not been transcribed, or is no longer visible. Attributes on the &lt;gap&gt; element may be used to indicate how much text is omitted, the reason for omitting it, etc. If text is not fully legible, the &lt;unclear&gt; element (available when using the additional tagset for transcription of primary sources) should be used to signal the areas of text which cannot be read with confidence in a similar way.</p> <p>Degrees of uncertainty over what can still be read, or whether a deletion was intended may be indicated by use of the &lt;certainty&gt; element (see 21. Certainty, Precision, and Responsibility).</p> <p>There is a clear distinction in the TEI between &lt;del&gt; and &lt;surplus&gt; on the one hand and &lt;gap&gt; or &lt;unclear&gt; on the other. &lt;del&gt; indicates a deletion present in the source being transcribed, which states the author's or a later scribe's intent to cancel or remove text. &lt;surplus&gt; indicates material present in the source being transcribed which should have been so deleted, but which is not in fact. &lt;gap&gt; or &lt;unclear&gt;, by contrast, signal an editor's or encoder's decision to omit something or their inability to read the source text. See sections 11.3.1.7. Text Omitted from or Supplied in the Transcription and 11.3.3.2. Use of the gap, del, damage, unclear, and supplied Elements in Combination for the relationship between these and other related elements used in detailed transcription.</p>
<b>Example</b>	<pre>&lt;l&gt; &lt;del rend="overtyped"&gt;Mein&lt;/del&gt; Frisch &lt;del rend="overstrike" type="primary"&gt;schwebt&lt;/del&gt; weht der Wind &lt;/l&gt;</pre>
<b>Example</b>	<pre>&lt;del rend="overstrike"&gt; &lt;gap reason="illegible" quantity="5" unit="character"/&gt; &lt;/del&gt;</pre>

--	--

### 9.1.20. <editor>

<b>&lt;editor&gt;</b> contains a secondary statement of responsibility for a bibliographic item, for example the name of an individual, institution or organization, (or of several such) acting as editor, compiler, translator, etc. [3.12.2.2. Titles, Authors, and Editors]	
<b>Module</b>	core
<b>Attributes</b>	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <u>att.global.rendition</u> (@rend, @style, @rendition)) ( <u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <u>att.global.analytic</u> (@ana)) ( <u>att.global.facs</u> (@facs)) ( <u>att.global.change</u> (@change)) ( <u>att.global.responsibility</u> (@cert, @resp)) ( <u>att.global.source</u> (@source)) ( <u>att.naming</u> (@role, @nymRef)) ( <u>att.canonical</u> (@key, @ref)) ( <u>att.data-table</u> (@calendar, @period)) ( <u>att.data-table.w3c</u> (@when, @notBefore, @notAfter, @from, @to)) ( <u>att.data-table.iso</u> (@when-iso, @notBefore-iso, @notAfter-iso, @from-iso, @to-iso)) ( <u>att.data-table.custom</u> (@when-custom, @notBefore-custom, @notAfter-custom, @from-custom, @to-custom, @datingPoint, @datingMethod))
<b>Member of</b>	<u>model.respLike</u>
<b>Contained by</b>	<b>header:</b> <u>seriesStmt</u> <u>titleStmt</u>
<b>May contain</b>	<b>analysis:</b> <u>c</u> <u>cl</u> <u>interp</u> <u>interpGrp</u> <u>m</u> <u>pc</u> <u>phr</u> <u>s</u> <u>span</u> <u>spanGrp</u> <u>w</u> <b>core:</b> <u>add</u> <u>address</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>pb</u> <u>ptr</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>term</u> <u>title</u> <b>header:</b> <u>idno</u> <b>linking:</b> <u>seg</u> <b>msdescription:</b> <u>objectType</u> <u>stamp</u> <b>namesdates:</b> <u>country</u> <u>orgName</u> <u>persName</u> <u>roleName</u> <u>settlement</u> <b>textcrit:</b> <u>app</u> <b>transcr:</b> <u>listTranspose</u> <u>metamark</u> <u>restore</u> <u>subst</u> character data
<b>Note</b>	A consistent format should be adopted. Particularly where cataloguing is likely to be based on the content of the header, it is advisable to use generally recognized authority lists for the exact form of personal names.
<b>Example</b>	<pre> &lt;editor role="Technical_Editor"&gt;Ron Van den Branden&lt;/editor&gt; &lt;editor role="Editor-in-Chief"&gt;John Walsh&lt;/editor&gt; &lt;editor role="Managing_Editor"&gt;Anne Baillot&lt;/editor&gt; </pre>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;macroRef key="macro.phraseSeq"/&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element editor {   att.global.attributes,   att.naming.attributes,   att.data-table.attributes,   macro.phraseSeq } </pre>

### 9.1.21. <encodingDesc>

<b>&lt;encodingDesc&gt;</b> (encoding description) documents the relationship between an electronic text and the source or sources from which it was derived. [2.3. The Encoding Description 2.1.1. The TEI Header and Its Components]	
<b>Module</b>	header
<b>Attributes</b>	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <u>att.global.rendition</u> (@rend, @style, @rendition)) ( <u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <u>att.global.analytic</u> (@ana)) ( <u>att.global.facs</u>

	(@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source))
Member of	<u>model.teiHeaderPart</u>
Contained by	<b>header:</b> <u>teiHeader</u>
May contain	<b>core:</b> <u>p</u> <b>linking:</b> <u>ab</u> <b>textcrit:</b> <u>variantEncoding</u>
Example	<pre>&lt;encodingDesc&gt; &lt;p&gt;Basic encoding, capturing lexical information only. All hyphenation, punctuation, and variant spellings normalized. No formatting or layout information preserved.&lt;/p&gt; &lt;/encodingDesc&gt;</pre>
Content model	<pre>&lt;content&gt; &lt;alternate minOccurs="1" maxOccurs="unbounded"&gt; &lt;classRef key="model.encodingDescPart" /&gt; &lt;classRef key="model.pLike" /&gt; &lt;/alternate&gt; &lt;/content&gt;</pre>
Schema Declaration	<pre>element encodingDesc { att.global.attributes, ( model.encodingDescPart   model.pLike )+ }</pre>

### 9.1.22. <facsimile>

<facsimile> contains a representation of some written source in the form of a set of images rather than as transcribed or encoded text. [11.1. Digital Facsimiles]	
Module	transcr
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <u>att.global.rendition</u> (@rend, @style, @rendition)) ( <u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <u>att.global.analytic</u> (@ana)) ( <u>att.global.facs</u> (@facs)) ( <u>att.global.change</u> (@change)) ( <u>att.global.responsibility</u> (@cert, @resp)) ( <u>att.global.source</u> (@source)) <u>att.declaring</u> (@decls)
Member of	<u>model.resource</u>
Contained by	<b>textstructure:</b> <u>TEI</u>
May contain	<b>core:</b> <u>graphic</u> <b>transcr:</b> <u>surface</u> <u>surfaceGrp</u>
Example	<pre>&lt;facsimile&gt; &lt;graphic url="page1.png" /&gt; &lt;surface&gt; &lt;graphic url="page2-highRes.png" /&gt; &lt;graphic url="page2-lowRes.png" /&gt; &lt;/surface&gt; &lt;graphic url="page3.png" /&gt; &lt;graphic url="page4.png" /&gt; &lt;/facsimile&gt;</pre>
Example	<pre>&lt;facsimile&gt; &lt;surface ulx="0" uly="0" lrx="200" lry="300"&gt; &lt;graphic url="Bovelles-49r.png" /&gt; &lt;/surface&gt; &lt;/facsimile&gt;</pre>
Content model	<pre>&lt;content&gt; &lt;sequence&gt; &lt;elementRef key="front" minOccurs="0" /&gt; &lt;alternate minOccurs="1" maxOccurs="unbounded"&gt; &lt;classRef key="model.graphicLike" /&gt; &lt;elementRef key="surface" /&gt; &lt;elementRef key="surfaceGrp" /&gt; &lt;/alternate&gt; &lt;elementRef key="back" minOccurs="0" /&gt; &lt;/sequence&gt; &lt;/content&gt;</pre>

<b>Schema Declaration</b>	<pre> element facsimile {   att.global.attributes,   att.declaring.attributes,   ( front?, ( model.graphicLike   surface   surfaceGrp )+, back? ) } </pre>
---------------------------	--

### 9.1.23. <fileDesc>

<p>&lt;fileDesc&gt; (file description) contains a full bibliographic description of an electronic file. [2.2. The File Description 2.1.1. The TEI Header and Its Components]</p>	
<b>Module</b>	header
<b>Attributes</b>	<p>Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<a href="#">att.global.rendition</a> (@rend, @style, @rendition)) (<a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<a href="#">att.global.analytic</a> (@ana)) (<a href="#">att.global.facs</a> (@facs)) (<a href="#">att.global.change</a> (@change)) (<a href="#">att.global.responsibility</a> (@cert, @resp)) (<a href="#">att.global.source</a> (@source))</p>
<b>Contained by</b>	<b>header:</b> <a href="#">teiHeader</a>
<b>May contain</b>	<b>header:</b> <a href="#">publicationStmt</a> <a href="#">seriesStmt</a> <a href="#">sourceDesc</a> <a href="#">titleStmt</a>
<b>Note</b>	<p>The major source of information for those seeking to create a catalogue entry or bibliographic citation for an electronic file. As such, it provides a title and statements of responsibility together with details of the publication or distribution of the file, of any series to which it belongs, and detailed bibliographic notes for matters not addressed elsewhere in the header. It also contains a full bibliographic description for the source or sources from which the electronic text was derived.</p>
<b>Example</b>	<pre> &lt;fileDesc&gt;   &lt;titleStmt&gt;     &lt;title&gt;The shortest possible TEI document&lt;/title&gt;   &lt;/titleStmt&gt;   &lt;publicationStmt&gt;     &lt;p&gt;Distributed as part of TEI P5&lt;/p&gt;   &lt;/publicationStmt&gt;   &lt;sourceDesc&gt;     &lt;p&gt;No print source exists: this is an original digital text&lt;/p&gt;   &lt;/sourceDesc&gt; &lt;/fileDesc&gt; </pre>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;sequence&gt;     &lt;sequence&gt;       &lt;elementRef key="titleStmt"/&gt;       &lt;elementRef key="editionStmt"         minOccurs="0"/&gt;       &lt;elementRef key="extent" minOccurs="0"/&gt;       &lt;elementRef key="publicationStmt"/&gt;       &lt;elementRef key="seriesStmt"         minOccurs="0" maxOccurs="unbounded"/&gt;       &lt;elementRef key="notesStmt"         minOccurs="0"/&gt;     &lt;/sequence&gt;     &lt;elementRef key="sourceDesc"       minOccurs="1" maxOccurs="unbounded"/&gt;   &lt;/sequence&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element fileDesc {   att.global.attributes,   (     (       titleStmt,       editionStmt?,       extent?,       publicationStmt,       seriesStmt*,       notesStmt?     ),     sourceDesc+   ) } </pre>

### 9.1.24. <gap>

<p>&lt;gap&gt; (gap) indicates a point where material has been omitted in a transcription, whether for editorial reasons described in the TEI header, as part of sampling practice, or because the material is illegible, invisible, or inaudible. [3.5.3. Additions, Deletions, and Omissions]</p>	
<b>Module</b>	core
<b>Attributes</b>	<p>Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.timed</u> (@start, @end) <u>att.editLike</u> (@evidence, @instant) <u>att.dimensions</u> (@unit, @quantity, @extent, @precision, @scope) (<u>att.ranging</u> (@atLeast, @atMost, @min, @max, @confidence))</p> <p>reason (reason) gives the reason for omission</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.enumerated</u> separated by whitespace</p> <p><b>Suggested values include:</b> <b>cancelled</b> (cancelled)  <b>deleted</b> (deleted)  <b>editorial</b> (editorial) for features omitted from transcription due to editorial policy  <b>illegible</b> (illegible)  <b>inaudible</b> (inaudible)  <b>irrelevant</b> (irrelevant)  <b>sampling</b> (sampling)</p> <p>agent (agent) in the case of text omitted because of damage, categorizes the cause of the damage, if it can be identified.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Sample values include:</b> <b>rubbing</b> (rubbing) damage results from rubbing of the leaf edges  <b>mildew</b> (mildew) damage results from mildew on the leaf surface  <b>smoke</b> (smoke) damage results from smoke</p>
<b>Member of</b>	<u>model.global.edit</u>

Contained by	<b>analysis:</b> <a href="#">cl</a> <a href="#">m</a> <a href="#">phr</a> <a href="#">s</a> <a href="#">span</a> <a href="#">w</a> <b>core:</b> <a href="#">add</a> <a href="#">address</a> <a href="#">date</a> <a href="#">del</a> <a href="#">editor</a> <a href="#">hi</a> <a href="#">name</a> <a href="#">note</a> <a href="#">p</a> <a href="#">pubPlace</a> <a href="#">publisher</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">rs</a> <a href="#">street</a> <a href="#">term</a> <a href="#">title</a> <b>header:</b> <a href="#">change</a> <a href="#">classCode</a> <a href="#">handNote</a> <a href="#">language</a> <a href="#">licence</a> <b>linking:</b> <a href="#">ab</a> <a href="#">seg</a> <b>msdescription:</b> <a href="#">accMat</a> <a href="#">objectType</a> <a href="#">stamp</a> <b>namesdates:</b> <a href="#">country</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">person</a> <a href="#">roleName</a> <a href="#">settlement</a> <b>textcrit:</b> <a href="#">lem</a> <a href="#">rdg</a> <b>textstructure:</b> <a href="#">body</a> <a href="#">div</a> <a href="#">text</a> <b>transcr:</b> <a href="#">metamark</a> <a href="#">restore</a> <a href="#">surface</a> <a href="#">surfaceGrp</a>
May contain	Empty element
Note	<p>The <a href="#">&lt;gap&gt;</a>, <a href="#">&lt;unclear&gt;</a>, and <a href="#">&lt;del&gt;</a> core tag elements may be closely allied in use with the <a href="#">&lt;damage&gt;</a> and <a href="#">&lt;supplied&gt;</a> elements, available when using the additional tagset for transcription of primary sources. See section 11.3.3.2. Use of the <a href="#">gap</a>, <a href="#">del</a>, <a href="#">damage</a>, <a href="#">unclear</a>, and <a href="#">supplied</a> Elements in Combination for discussion of which element is appropriate for which circumstance.</p> <p>The <a href="#">&lt;gap&gt;</a> tag simply signals the editors decision to omit or inability to transcribe a span of text. Other information, such as the interpretation that text was deliberately erased or covered, should be indicated using the relevant tags, such as <a href="#">&lt;del&gt;</a> in the case of deliberate deletion.</p>
Example	<pre>&lt;gap quantity="4" unit="chars" reason="illegible"/&gt;</pre>
Example	<pre>&lt;gap quantity="1" unit="essay" reason="sampling"/&gt;</pre>
Example	<pre>&lt;del&gt; &lt;gap atLeast="4" atMost="8" unit="chars" reason="illegible"/&gt; &lt;/del&gt;</pre>
Example	<pre>&lt;gap extent="several lines" reason="lost"/&gt;</pre>
Content model	<pre>&lt;content&gt; &lt;alternate minOccurs="0" maxOccurs="unbounded"&gt;   &lt;classRef key="model.descLike"/&gt;   &lt;classRef key="model.certLike"/&gt; &lt;/alternate&gt; &lt;/content&gt;</pre>
Schema Declaration	<pre> element gap {   att.global.attributes,   att.timed.attributes,   att.editLike.attributes,   att.dimensions.attributes,   attribute reason   {     list     {       (         "cancelled"           "deleted"           "editorial"           "illegible"           "inaudible"           "irrelevant"           "sampling"       )+     }   }?,   attribute agent { text }?,   ( model.descLike   model.certLike )* } </pre>

### 9.1.25. <graphic>

<b>&lt;graphic&gt;</b> (graphic) indicates the location of a graphic or illustration, either forming part of a text, or providing an image of it. [3.10. Graphics and Other Non-textual Components 11.1. Digital Facsimiles]	
Module	core
Attributes	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs,

	@copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.media (@width, @height, @scale) (att.internetMedia (@mimeType)) att.resourced (@url) att.declaring (@decls)

<b>May contain</b>	Empty element
<b>Note</b>	By convention, <i>&lt;lb&gt;</i> elements should appear at the point in the text where a new line starts. The <i>n</i> attribute, if used, indicates the number or other value associated with the text between this point and the next <i>&lt;lb&gt;</i> element, typically the sequence number of the line within the page, or other appropriate unit. This element is intended to be used for marking actual line breaks on a manuscript or printed page, at the point where they occur; it should not be used to tag structural units such as lines of verse (for which the <i>&lt;l&gt;</i> element is available) except in circumstances where structural units cannot otherwise be marked.

	The <i>type</i> attribute may be used to characterize the line break in any respect. The more specialized attributes <i>break</i> , <i>ed</i> , or <i>edRef</i> should be preferred when the intent is to indicate whether or not the line break is word-breaking, or to note the source from which it derives.
<b>Example</b>	This example shows typographical line breaks within metrical lines, where they occur at different places in different editions: <pre>&lt;l&gt;Of Mans First Disobedience,&lt;lb ed="1674"/&gt; and&lt;lb ed="1667"/&gt; the Fruit&lt;/l&gt; &lt;l&gt;Of that Forbidden Tree, whose&lt;lb ed="1667 1674"/&gt; mortal tast&lt;/l&gt; &lt;l&gt;Brought Death into the World,&lt;lb ed="1667"/&gt; and all&lt;lb ed="1674"/&gt; our woe,&lt;/l&gt;</pre>
<b>Example</b>	This example encodes typographical line breaks as a means of preserving the visual appearance of a title page. The <i>break</i> attribute is used to show that the line break does not (as elsewhere) mark the start of a new word. <pre>&lt;titlePart&gt; &lt;lb/&gt;With Additions, ne-&lt;lb break="no"/&gt;ver before Printed. &lt;/titlePart&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt; &lt;empty/&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element lb {   att.global.attributes,   att.typed.attributes,   att.edition.attributes,   att.spanning.attributes,   att.breaking.attributes,   empty }</pre>

### 9.1.36. <lem>

<lem> (lemma) contains the lemma, or base text, of a textual variation. [12.1. The Apparatus Entry, Readings, and Witnesses]	
<b>Module</b>	textcrit
<b>Attributes</b>	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source)) <a href="#">att.textCritical</a> (@type, @cause, @varSeq, @require) ( <a href="#">att.written</a> (@hand)) <a href="#">att.witnessed</a> (@wit)
<b>Contained by</b>	<a href="#">textcrit: app</a>
<b>May contain</b>	<b>analysis:</b> <a href="#">c</a> <a href="#">cl</a> <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">m</a> <a href="#">pc</a> <a href="#">phr</a> <a href="#">s</a> <a href="#">span</a> <a href="#">spanGrp</a> <a href="#">w</a> <b>core:</b> <a href="#">add</a> <a href="#">address</a> <a href="#">date</a> <a href="#">del</a> <a href="#">gap</a> <a href="#">graphic</a> <a href="#">hi</a> <a href="#">lb</a> <a href="#">name</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">p</a> <a href="#">pb</a> <a href="#">ptr</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">rs</a> <a href="#">term</a> <a href="#">title</a> <b>header:</b> <a href="#">idno</a> <b>linking:</b> <a href="#">ab</a> <a href="#">seg</a> <b>msdescription:</b> <a href="#">objectType</a> <a href="#">stamp</a> <b>namesdates:</b> <a href="#">country</a> <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">roleName</a> <a href="#">settlement</a> <b>textcrit:</b> <a href="#">app</a> <a href="#">listWit</a> <b>textstructure:</b> <a href="#">div</a> <b>transcr:</b> <a href="#">listTranspose</a> <a href="#">metamark</a> <a href="#">restore</a> <a href="#">subst</a> character data
<b>Note</b>	The term <i>lemma</i> is used in text criticism to describe the reading given in the main text, which may be used as a heading in the apparatus itself. This usage connects it to mathematics (where a lemma is a proven proposition used as a step in a proof, a "given") and natural-language processing (where a lemma is the dictionary headword associated with an inflected form in the running text).
<b>Example</b>	<pre>&lt;app&gt; &lt;lem wit="#E1 #Hg"&gt;Experience&lt;/lem&gt; &lt;rdg wit="#La" type="substantive"&gt;Experiment&lt;/rdg&gt; &lt;rdg wit="#Ra2" type="substantive"&gt;Eryment&lt;/rdg&gt; &lt;/app&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt; &lt;alternate minOccurs="0"</pre>

	<pre> maxOccurs="unbounded"&gt; &lt;textNode/&gt; &lt;classRef key="model.divLike"/&gt; &lt;classRef key="model.divPart"/&gt; &lt;elementRef key="titlePage"/&gt; &lt;elementRef key="argument"/&gt; &lt;elementRef key="byline"/&gt; &lt;elementRef key="docAuthor"/&gt; &lt;elementRef key="docDate"/&gt; &lt;elementRef key="docEdition"/&gt; &lt;elementRef key="docImprint"/&gt; &lt;elementRef key="docTitle"/&gt; &lt;elementRef key="epigraph"/&gt; &lt;elementRef key="imprimatur"/&gt; &lt;elementRef key="titlePart"/&gt; &lt;elementRef key="epilogue"/&gt; &lt;elementRef key="performance"/&gt; &lt;elementRef key="prologue"/&gt; &lt;elementRef key="set"/&gt; &lt;classRef key="model.gLike"/&gt; &lt;classRef key="model.phrase"/&gt; &lt;classRef key="model.inter"/&gt; &lt;classRef key="model.global"/&gt; &lt;classRef key="model.rdgPart"/&gt; &lt;/alternate&gt; &lt;/content&gt; </pre>

### 9.1.41. <listWit>

<listWit> (witness list) lists definitions for all the witnesses referred to by a critical apparatus, optionally grouped hierarchically. [12.1. The Apparatus Entry, Readings, and Witnesses]	
Module	textcrit
Attributes	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source)) <a href="#">att.sortable</a> (@sortKey)
Member of	model.listLike
Contained by	<b>core:</b> <a href="#">add</a> <a href="#">del</a> <a href="#">hi</a> <a href="#">note</a> <a href="#">p</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">title</a> <b>header:</b> <a href="#">change</a> <a href="#">handNote</a> <a href="#">licence</a> <a href="#">sourceDesc</a> <b>linking:</b> <a href="#">ab</a> <a href="#">seg</a> <b>msdescription:</b> <a href="#">accMat</a> <b>textcrit:</b> <a href="#">lem</a> <a href="#">listWit</a> <a href="#">rdg</a> <a href="#">witness</a> <b>textstructure:</b> <a href="#">body</a> <a href="#">div</a> <b>transcr:</b> <a href="#">metamark</a> <a href="#">restore</a>
May contain	<b>textcrit:</b> <a href="#">listWit</a> <a href="#">witness</a>
Note	<p>May contain a series of &lt;witness&gt; or &lt;listWit&gt; elements.</p> <p>The provision of a &lt;listWit&gt; element simplifies the automatic processing of the apparatus, e.g. the reconstruction of the readings for all witnesses from an exhaustive apparatus.</p> <p>Situations commonly arise where there are many more or less fragmentary witnesses, such that there may be quite distinct groups of witnesses for different parts of a text or collection of texts. Such groups may be given separately, or nested within a single &lt;listWit&gt; element at the beginning of the file listing all the witnesses, partial and complete, for the text, with the</p>

	<p>attestation of fragmentary witnesses indicated within the apparatus by use of the &lt;witStart&gt; and &lt;witEnd&gt; elements described in section 12.1.5. Fragmentary Witnesses.</p> <p>Note however that a given witness can only be defined once, and can therefore only appear within a single &lt;listWit&gt; element.</p>
<b>Example</b>	<pre>&lt;listWit&gt;   &lt;witness xml:id="HL26"&gt;Ellesmere, Huntingdon Library 26.C.9&lt;/witness&gt;   &lt;witness xml:id="PN392"&gt;Hengwrt, National Library of Wales,     Aberystwyth, Peniarth 392D&lt;/witness&gt;   &lt;witness xml:id="RP149"&gt;Bodleian Library Rawlinson Poetic 149     (see further &lt;ptr target="#MSRP149"/&gt;)&lt;/witness&gt; &lt;/listWit&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt;   &lt;sequence&gt;     &lt;classRef key="model.headLike"       minOccurs="0"/&gt;     &lt;elementRef key="desc" minOccurs="0"       maxOccurs="unbounded"/&gt;     &lt;alternate minOccurs="1"       maxOccurs="unbounded"&gt;       &lt;elementRef key="witness"/&gt;       &lt;elementRef key="listWit"/&gt;     &lt;/alternate&gt;   &lt;/sequence&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element listWit {   att.global.attributes,   att.sortable.attributes,   ( model.headLike?, desc*, ( witness   listWit )+ ) }</pre>

### 9.1.42. <m>

<m> (morpheme) represents a grammatical morpheme. [17.1. Linguistic Segment Categories]	
<b>Module</b>	analysis
<b>Attributes</b>	<p>Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<a href="#">att.global.rendition</a> (@rend, @style, @rendition)) (<a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<a href="#">att.global.analytic</a> (@ana)) (<a href="#">att.global.facs</a> (@facs)) (<a href="#">att.global.change</a> (@change)) (<a href="#">att.global.responsibility</a> (@cert, @resp)) (<a href="#">att.global.source</a> (@source)) <a href="#">att.segLike</a> (@function) (<a href="#">att.datcat</a> (@datcat, @valueDatcat)) (<a href="#">att.fragmentable</a> (@part)) <a href="#">att.typed</a> (@type, @subtype) <a href="#">att.notated</a> (@notation)</p> <p><b>baseForm</b> supplies the morpheme's base form.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.word</a></p>

<b>Example</b>	In the following example, the translator has supplied a footnote containing an explanation of the term translated as "painterly": <pre>And yet it is not only</pre>

	<pre> in the great line of Italian renaissance art, but even in the painterly &lt;note place="bottom" type="gloss" resp="#MDMH"&gt; &lt;term xml:lang="de"&gt;Malerisch&lt;/term&gt;. This word has, in the German, two distinct meanings, one objective, a quality residing in the object, the other subjective, a mode of apprehension and creation. To avoid confusion, they have been distinguished in English as &lt;mentioned&gt;picturesque&lt;/mentioned&gt; and &lt;mentioned&gt;painterly&lt;/mentioned&gt; respectively. &lt;/note&gt; style of the Dutch genre painters of the seventeenth century that drapery has this psychological significance.  &lt;!-- elsewhere in the document --&gt; &lt;respStmt xml:id="MDMH"&gt;   &lt;resp&gt;translation from German to English&lt;/resp&gt;   &lt;name&gt;Hottinger, Marie Donald Mackie&lt;/name&gt; &lt;/respStmt&gt; </pre> <p>For this example to be valid, the code MDMH must be defined elsewhere, for example by means of a responsibility statement in the associated TEI header.</p>
<b>Example</b>	<p>The global <i>n</i> attribute may be used to supply the symbol or number used to mark the note's point of attachment in the source text, as in the following example:</p> <pre> Mevorakh b. Saadya's mother, the matriarch of the family during the second half of the eleventh century, &lt;note n="126" anchored="true"&gt; The alleged mention of Judah Nagid's mother in a letter from 1071 is, in fact, a reference to Judah's children; cf. above, nn. 111 and 54. &lt;/note&gt; is well known from Geniza documents published by Jacob Mann. </pre> <p>However, if notes are numbered in sequence and their numbering can be reconstructed automatically by processing software, it may well be considered unnecessary to record the note numbers.</p>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;macroRef key="macro.specialPara"/&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element note {   att.global.attributes,   att.placement.attributes,   att.pointing.attributes,   att.typed.attributes,   att.written.attributes,   att.anchoring.attributes,   macro.specialPara } </pre>

### 9.1.46. <noteGrp>

<noteGrp> contains a group of notes [3.9.1.1. Encoding Grouped Notes]	
<b>Module</b>	core

<b>Schema Declaration</b>	<pre> element particDesc {   att.global.attributes,   att.declarable.attributes,   ( model.pLike+   ( model.personLike   listPerson   listOrg )+ ) } </pre>

### 9.1.52. <pb>

<pb> (page beginning) marks the beginning of a new page in a paginated document. [3.11.3. Milestone Elements]	
<b>Module</b>	core
<b>Attributes</b>	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <u>att.global.rendition</u> (@rend, @style, @rendition)) ( <u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <u>att.global.analytic</u> (@ana)) ( <u>att.global.facs</u> (@facs)) ( <u>att.global.change</u> (@change)) ( <u>att.global.responsibility</u> (@cert, @resp)) ( <u>att.global.source</u> (@source)) <u>att.typed</u> (@type, @subtype) <u>att.edition</u> (@ed, @edRef) <u>att.spanning</u> (@spanTo) <u>att.breaking</u> (@break)
<b>Member of</b>	<u>model.milestoneLike</u>
<b>Contained by</b>	<b>analysis:</b> <u>cl</u> <u>m</u> <u>phr</u> <u>s</u> <u>span</u> <u>w</u> <b>core:</b> <u>add</u> <u>address</u> <u>date</u> <u>del</u> <u>editor</u> <u>hi</u> <u>name</u> <u>note</u> <u>p</u> <u>pubPlace</u> <u>publisher</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>street</u> <u>term</u> <u>title</u> <b>header:</b> <u>change</u> <u>classCode</u> <u>handNote</u> <u>language</u> <u>licence</u> <b>linking:</b> <u>ab</u> <u>seg</u> <b>msdescription:</b> <u>accMat</u> <u>objectType</u> <u>stamp</u> <b>namesdates:</b> <u>country</u> <u>org</u> <u>orgName</u> <u>persName</u> <u>person</u> <u>roleName</u> <u>settlement</u> <b>textcrit:</b> <u>lem</u> <u>rdg</u> <b>textstructure:</b> <u>body</u> <u>div</u> <u>text</u> <b>transcr:</b> <u>metamark</u> <u>restore</u> <u>subst</u> <u>surface</u> <u>surfaceGrp</u>
<b>May contain</b>	Empty element
<b>Note</b>	<p>A &lt;pb&gt; element should appear at the start of the page which it identifies. The global <i>n</i> attribute indicates the number or other value associated with this page. This will normally be the page number or signature printed on it, since the physical sequence number is implicit in the presence of the &lt;pb&gt; element itself.</p> <p>The <i>type</i> attribute may be used to characterize the page break in any respect. The more specialized attributes <i>break</i>, <i>ed</i>, or <i>edRef</i> should be preferred when the intent is to indicate whether or not the page break is word-breaking, or to note the source from which it derives.</p>
<b>Example</b>	<p>Page numbers may vary in different editions of a text.</p> <pre> &lt;p&gt; ... &lt;pb n="145" ed="ed2"/&gt; &lt;!-- Page 145 in edition "ed2" starts here --&gt; ... &lt;pb n="283" ed="ed1"/&gt; </pre>

	<code>&lt;!-- Page 283 in edition "ed1" starts here--&gt; ... &lt;/p&gt;</code>
<b>Example</b>	<p>A page break may be associated with a facsimile image of the page it introduces by means of the <i>fac</i>s attribute</p> <pre> &lt;body&gt;   &lt;pb n="1" facs="page1.png"/&gt;   &lt;!-- page1.png contains an image of the page;         the text it contains is encoded here --&gt;   &lt;p&gt;   &lt;!-- ... --&gt;   &lt;/p&gt;   &lt;pb n="2" facs="page2.png"/&gt;   &lt;!-- similarly, for page 2 --&gt;   &lt;p&gt;   &lt;!-- ... --&gt;   &lt;/p&gt; &lt;/body&gt; </pre>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;empty/&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element pb {   att.global.attributes,   att.typed.attributes,   att.edition.attributes,   att.spanning.attributes,   att.breaking.attributes,   empty } </pre>

<b>Schema Declaration</b>	<pre> element phr {   att.global.attributes,   att.segLike.attributes,   att.typed.attributes,   att.notated.attributes,   macro.phraseSeq } </pre>

### 9.1.57. <physDesc>

<physDesc> (physical description) contains a full physical description of a manuscript, manuscript part, or other object optionally subdivided using more specialized elements from the model.physDescPart class. [10.7. Physical Description]	
Module	msdescription
Attributes	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source))
Contained by	—
May contain	<b>core:</b> <a href="#">p</a> <b>linking:</b> <a href="#">ab</a> <b>msdescription:</b> <a href="#">accMat</a>
Example	<pre> &lt;physDesc&gt;   &lt;objectDesc form="codex"&gt;     &lt;supportDesc material="perg"&gt;       &lt;support&gt;Parchment.&lt;/support&gt;       &lt;extent&gt;i + 55 leaves       &lt;dimensions scope="all" type="leaf"         unit="inch"&gt;           &lt;height&gt;7¼&lt;/height&gt;           &lt;width&gt;5#&lt;/width&gt;         &lt;/dimensions&gt;       &lt;/extent&gt;     &lt;/supportDesc&gt;     &lt;layoutDesc&gt;       &lt;layout columns="2"&gt;In double columns.&lt;/layout&gt;     &lt;/layoutDesc&gt;   &lt;/objectDesc&gt;   &lt;handDesc&gt;     &lt;p&gt;Written in more than one hand.&lt;/p&gt;   &lt;/handDesc&gt;   &lt;decoDesc&gt;     &lt;p&gt;With a few coloured capitals.&lt;/p&gt;   &lt;/decoDesc&gt; &lt;/physDesc&gt; </pre>
Content model	<pre> &lt;content&gt;   &lt;sequence&gt;     &lt;classRef key="model.pLike" minOccurs="0"       maxOccurs="unbounded" /&gt;     &lt;classRef key="model.physDescPart"       expand="sequenceOptional" /&gt;   &lt;/sequence&gt; &lt;/content&gt; </pre>
Schema Declaration	<pre> element physDesc { att.global.attributes, ( model.pLike*, accMat? ) } </pre>

### 9.1.58. <postCode>

<postCode> (postal code) contains a numerical or alphanumeric code used as part of a postal address to simplify sorting or delivery of mail. [3.6.2. Addresses]	
Module	core
Attributes	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source))
Member of	<a href="#">model.addrPart</a>
Contained by	<b>core:</b> <a href="#">address</a>
May contain	Character data only
Note	The position and nature of postal codes is highly country-specific; the conventions appropriate to the country concerned should be used.
Example	<pre> &lt;postCode&gt;HR1 3LR&lt;/postCode&gt; </pre>

<b>Example</b>	<code>&lt;postCode&gt;60142-7&lt;/postCode&gt;</code>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;textNode/&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element postCode { att.global.attributes, text } </pre>

### 9.1.59. <profileDesc>

<b>&lt;profileDesc&gt;</b> (text-profile description) provides a detailed description of non-bibliographic aspects of a text, specifically the languages and sublanguages used, the situation in which it was produced, the participants and their setting. [2.4. The Profile Description 2.1.1. The TEI Header and Its Components]	
<b>Module</b>	header
<b>Attributes</b>	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source))
<b>Member of</b>	<a href="#">model.teiHeaderPart</a>
<b>Contained by</b>	<b>header:</b> <a href="#">teiHeader</a>
<b>May contain</b>	<b>corpus:</b> <a href="#">particDesc</a> <b>header:</b> <a href="#">correspDesc</a> <a href="#">creation</a> <a href="#">langUsage</a> <a href="#">textClass</a> <b>transcr:</b> <a href="#">handNotes</a> <a href="#">listTranspose</a>
<b>Note</b>	Although the content model permits it, it is rarely meaningful to supply multiple occurrences for any of the child elements of <a href="#">&lt;profileDesc&gt;</a> unless these are documenting multiple texts.
<b>Example</b>	<pre> &lt;profileDesc&gt;   &lt;langUsage&gt;     &lt;language ident="fr"&gt;French&lt;/language&gt;   &lt;/langUsage&gt;   &lt;textDesc n="novel"&gt;     &lt;channel mode="w"&gt;print; part issues&lt;/channel&gt;     &lt;constitution type="single"/&gt;     &lt;derivation type="original"/&gt;     &lt;domain type="art"/&gt;     &lt;factuality type="fiction"/&gt;     &lt;interaction type="none"/&gt;     &lt;preparedness type="prepared"/&gt;     &lt;purpose type="entertain" degree="high"/&gt;     &lt;purpose type="inform" degree="medium"/&gt;   &lt;/textDesc&gt;   &lt;settingDesc&gt;     &lt;setting&gt;       &lt;name&gt;Paris, France&lt;/name&gt;       &lt;time&gt;Late 19th century&lt;/time&gt;     &lt;/setting&gt;   &lt;/settingDesc&gt; &lt;/profileDesc&gt; </pre>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;classRef key="model.profileDescPart"     minOccurs="0" maxOccurs="unbounded"/&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element profileDesc { att.global.attributes, model.profileDescPart* } </pre>

### 9.1.60. <ptr>

<b>&lt;ptr&gt;</b> (pointer) defines a pointer to another location. [3.7. Simple Links and Cross-References 16.1. Links]	
<b>Module</b>	core
<b>Attributes</b>	Attributes <a href="#">att.cReferencing</a> (@cRef) <a href="#">att.declaring</a> (@decls) <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source)) <a href="#">att.internetMedia</a> (@mimeType) <a href="#">att.pointing</a> (@targetLang, @target, @evaluate) <a href="#">att.typed</a> (@type, @subtype)

Member of	<u>model.ptrLike</u>
Contained by	<b>analysis:</b> <u>cl</u> <u>phr</u> <u>s</u> <u>span</u> <b>core:</b> <u>add</u> <u>date</u> <u>del</u> <u>editor</u> <u>hi</u> <u>name</u> <u>note</u> <u>p</u> <u>pubPlace</u> <u>publisher</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>street</u> <u>term</u> <u>title</u> <b>header:</b> <u>change</u> <u>classCode</u> <u>creation</u> <u>handNote</u> <u>language</u> <u>licence</u> <u>publicationStmt</u> <b>linking:</b> <u>ab</u> <u>seg</u> <b>msdescription:</b> <u>accMat</u> <u>objectType</u> <u>stamp</u> <b>namesdates:</b> <u>country</u> <u>org</u> <u>orgName</u> <u>persName</u> <u>person</u> <u>roleName</u> <u>settlement</u> <b>textcrit:</b> <u>lem</u> <u>rdg</u> <u>witness</u> <b>transcr:</b> <u>metamark</u> <u>restore</u> <u>transpose</u>
May contain	Empty element
Example	<pre>&lt;ptr target="#p143 #p144"/&gt; &lt;ptr target="http://www.tei-c.org"/&gt; &lt;ptr cRef="1.3.4"/&gt;</pre>
Schematron	<s:report test="@target and @cRef">Only one of the attributes @target and @cRef may be supplied on <s:name/>.</s:report>
Content model	<pre>&lt;content&gt; &lt;empty/&gt; &lt;/content&gt;</pre>
Schema Declaration	<pre>element ptr {   att.cReferencing.attributes,   att.declaring.attributes,   att.global.attributes,   att.internetMedia.attributes,   att.pointing.attributes,   att.typed.attributes,   empty }</pre>

### 9.1.61. <pubPlace>

<pubPlace> (publication place) contains the name of the place where a bibliographic item was published. [3.12.2.4. Imprint, Size of a Document, and Reprint Information]	
Module	core
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <u>att.global.rendition</u> (@rend, @style, @rendition)) ( <u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <u>att.global.analytic</u> (@ana)) ( <u>att.global.facs</u> (@facs)) ( <u>att.global.change</u> (@change)) ( <u>att.global.responsibility</u> (@cert, @resp)) ( <u>att.global.source</u> (@source)) <u>att.naming</u> (@role, @nymRef) ( <u>att.canonical</u> (@key, @ref))
Member of	<u>model.publicationStmtPart.detail</u>
Contained by	<b>header:</b> <u>publicationStmt</u>
May contain	<b>analysis:</b> <u>c</u> <u>cl</u> <u>interp</u> <u>interpGrp</u> <u>m</u> <u>pc</u> <u>phr</u> <u>s</u> <u>span</u> <u>spanGrp</u> <u>w</u> <b>core:</b> <u>add</u> <u>address</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>pb</u> <u>ptr</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>term</u> <u>ti</u> <u>title</u> <b>header:</b> <u>idno</u> <b>linking:</b> <u>seg</u> <b>msdescription:</b> <u>objectType</u> <u>stamp</u> <b>namesdates:</b> <u>country</u> <u>orgName</u> <u>persName</u> <u>roleName</u> <u>settlement</u> <b>textcrit:</b> <u>app</u> <b>transcr:</b> <u>listTranspose</u> <u>metamark</u> <u>restore</u> <u>subst</u> character data
Example	<pre>&lt;publicationStmt&gt; &lt;publisher&gt;Oxford University Press&lt;/publisher&gt; &lt;pubPlace&gt;Oxford&lt;/pubPlace&gt; &lt;date&gt;1989&lt;/date&gt; &lt;/publicationStmt&gt;</pre>
Content model	<pre>&lt;content&gt; &lt;macroRef key="macro.phraseSeq"/&gt; &lt;/content&gt;</pre>

<b>Schema Declaration</b>	<pre> element pubPlace {   att.global.attributes,   att.naming.attributes,   macro.phraseSeq } </pre>
---------------------------	---

### 9.1.62. <publicationStmt>

<b>&lt;publicationStmt&gt;</b> (publication statement) groups information concerning the publication or distribution of an electronic or other text. [2.2.4. Publication, Distribution, Licensing, etc. 2.2. The File Description]	
<b>Module</b>	header
<b>Attributes</b>	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <u>att.global.rendition</u> (@rend, @style, @rendition)) ( <u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <u>att.global.analytic</u> (@ana)) ( <u>att.global.facs</u> (@facs)) ( <u>att.global.change</u> (@change)) ( <u>att.global.responsibility</u> (@cert, @resp)) ( <u>att.global.source</u> (@source))
<b>Contained by</b>	<b>header:</b> <u>fileDesc</u>
<b>May contain</b>	<b>core:</b> <u>address</u> <u>date</u> <u>p</u> <u>ptr</u> <u>pubPlace</u> <u>publisher</u> <u>ref</u> <b>header:</b> <u>availability</u> <u>idno</u> <b>linking:</b> <u>ab</u>
<b>Note</b>	Where a publication statement contains several members of the <code>model.publicationStmtPart.agency</code> or <code>model.publicationStmtPart.detail</code> classes rather than one or more paragraphs or anonymous blocks, care should be taken to ensure that the repeated elements are presented in a meaningful order. It is a conformance requirement that elements supplying information about publication place, address, identifier, availability, and date be given following the name of the publisher, distributor, or authority concerned, and preferably in that order.
<b>Example</b>	<pre> &lt;publicationStmt&gt;   &lt;publisher&gt;C. Muquardt &lt;/publisher&gt;   &lt;pubPlace&gt;Bruxelles &amp; Leipzig&lt;/pubPlace&gt;   &lt;date when="1846"/&gt; &lt;/publicationStmt&gt; </pre>
<b>Example</b>	<pre> &lt;publicationStmt&gt;   &lt;publisher&gt;Chadwyck Healey&lt;/publisher&gt;   &lt;pubPlace&gt;Cambridge&lt;/pubPlace&gt;   &lt;availability&gt;     &lt;p&gt;Available under licence only&lt;/p&gt;   &lt;/availability&gt;   &lt;date when="1992"&gt;1992&lt;/date&gt; &lt;/publicationStmt&gt; </pre>
<b>Example</b>	<pre> &lt;publicationStmt&gt;   &lt;publisher&gt;Zea Books&lt;/publisher&gt;   &lt;pubPlace&gt;Lincoln, NE&lt;/pubPlace&gt;   &lt;date&gt;2017&lt;/date&gt;   &lt;availability&gt;     &lt;p&gt;This is an open access work licensed under a Creative Commons Attribution 4.0 International license.&lt;/p&gt;   &lt;/availability&gt;   &lt;ptr target="http://digitalcommons.unl.edu/zeabook/55"/&gt; &lt;/publicationStmt&gt; </pre>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;alternate&gt;     &lt;sequence minOccurs="1"       maxOccurs="unbounded"&gt;       &lt;classRef key="model.publicationStmtPart.agency"/&gt;       &lt;classRef key="model.publicationStmtPart.detail"         minOccurs="0" maxOccurs="unbounded"/&gt;     &lt;/sequence&gt;     &lt;classRef key="model.pLike" minOccurs="1"       maxOccurs="unbounded"/&gt;   &lt;/alternate&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element publicationStmt {   att.global.attributes,   (     ( model.publicationStmtPart.agency, model.publicationStmtPart.detail* )+       model.pLike+   ) } </pre>

### 9.1.63. <publisher>

<publisher> (publisher) provides the name of the organization responsible for the publication or distribution of a bibliographic item. [3.12.2.4. Imprint, Size of a Document, and Reprint Information 2.2.4. Publication, Distribution, Licensing, etc.]	
<b>Module</b>	core
<b>Attributes</b>	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source)) <a href="#">att.canonical</a> (@key, @ref)
<b>Member of</b>	model.publicationStmtPart.agency
<b>Contained by</b>	<b>header:</b> <a href="#">publicationStmt</a>
<b>May contain</b>	<b>analysis:</b> <a href="#">c</a> <a href="#">cl</a> <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">m</a> <a href="#">pc</a> <a href="#">phr</a> <a href="#">s</a> <a href="#">span</a> <a href="#">spanGrp</a> <a href="#">w</a> <b>core:</b> <a href="#">add</a> <a href="#">address</a> <a href="#">date</a> <a href="#">del</a> <a href="#">gap</a> <a href="#">graphic</a> <a href="#">hi</a> <a href="#">lb</a> <a href="#">name</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">pb</a> <a href="#">ptr</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">rs</a> <a href="#">term</a> <a href="#">title</a> <b>header:</b> <a href="#">idno</a> <b>linking:</b> <a href="#">seg</a> <b>msdescription:</b> <a href="#">objectType</a> <a href="#">stamp</a> <b>namesdates:</b> <a href="#">country</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">roleName</a> <a href="#">settlement</a> <b>textcrit:</b> <a href="#">app</a> <b>transcr:</b> <a href="#">listTranspose</a> <a href="#">metamark</a> <a href="#">restore</a> <a href="#">subst</a> character data
<b>Note</b>	Use the full form of the name by which a company is usually referred to, rather than any abbreviation of it which may appear on a title page
<b>Example</b>	<pre>&lt;imprint&gt;   &lt;pubPlace&gt;Oxford&lt;/pubPlace&gt;   &lt;publisher&gt;Clarendon Press&lt;/publisher&gt;   &lt;date&gt;1987&lt;/date&gt; &lt;/imprint&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt;   &lt;macroRef key="macro.phraseSeq"/&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element publisher {   att.global.attributes,   att.canonical.attributes,   macro.phraseSeq }</pre>

### 9.1.64. <q>

<q> (quoted) contains material which is distinguished from the surrounding text using quotation marks or a similar method, for any one of a variety of reasons including, but not limited to: direct speech or thought, technical terms or jargon, authorial distance, quotations from elsewhere, and passages that are mentioned but not used. [3.3.3. Quotation]	
<b>Module</b>	core
<b>Attributes</b>	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source)) <a href="#">att.ascribed.directed</a> (@toWhom) ( <a href="#">att.ascribed</a> (@who))
	<p><b>type</b> (type) may be used to indicate whether the offset passage is spoken or thought, or to characterize it more finely.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.enumerated</a></p> <p><b>Suggested values include:</b> <b>spoken</b> (spoken) representation of speech</p>

	<p><b>thought</b> (thought) representation of thought, e.g. internal monologue</p> <p><b>writ-ten</b> (written) quotation from a written source</p> <p><b>so-called</b> (so called) authorial distance</p> <p><b>foreign</b> (foreign)</p> <p><b>distinct</b> (distinct) linguistically distinct</p> <p><b>term</b> technical term</p> <p><b>emph</b> (emph) rhetorically emphasized</p> <p><b>mentioned</b> (mentioned) referring to itself, not its normal referent</p>
<b>Member of</b>	<u>model.common model.hiLike</u>
<b>Contained by</b>	<p><b>analysis:</b> <u>cl m phr s span w</u></p> <p><b>core:</b> <u>add date del editor hi name note p pubPlace publisher q quote ref rs street term title</u></p> <p><b>header:</b> <u>change classCode creation handNote language licence</u></p> <p><b>linking:</b> <u>ab seg</u></p> <p><b>msdescription:</b> <u>accMat objectType stamp</u></p> <p><b>namesdates:</b> <u>country orgName persName roleName settlement</u></p> <p><b>textcrit:</b> <u>lem rdg witness</u></p> <p><b>textstructure:</b> <u>body div</u></p> <p><b>transcr:</b> <u>metamark restore</u></p>
<b>May contain</b>	<p><b>analysis:</b> <u>c cl interp interpGrp m pc phr s span spanGrp w</u></p> <p><b>core:</b> <u>add address date del gap graphic hi lb name note noteGrp p pb ptr q quote ref rs term title</u></p> <p><b>header:</b> <u>idno</u></p> <p><b>linking:</b> <u>ab seg</u></p> <p><b>msdescription:</b> <u>objectType stamp</u></p> <p><b>namesdates:</b> <u>country listOrg listPerson orgName persName roleName settlement</u></p> <p><b>textcrit:</b> <u>app listWit</u></p> <p><b>transcr:</b> <u>listTranspose metamark restore subst</u> character data</p>
<b>Note</b>	May be used to indicate that a passage is distinguished from the surrounding text for reasons concerning which no claim is made. When used in this manner, <u>&lt;q&gt;</u> may be thought of as syntactic sugar for <u>&lt;hi&gt;</u> with a value of <i>rend</i> that indicates the use of such mechanisms as quotation marks.
<b>Example</b>	<pre>It is spelled &lt;q&gt;Tübingen&lt;/q&gt; – to enter the letter &lt;q&gt;u&lt;/q&gt; with an umlaut hold down the &lt;q&gt;option&lt;/q&gt; key and press &lt;q&gt;0 0 f c&lt;/q&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt;   &lt;macroRef key="macro.specialPara"/&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element q {   att.global.attributes,   att.ascribed.directed.attributes,   attribute type   {     "spoken"       "thought"       "written"</pre>

	<pre>       "soCalled"       "foreign"       "distinct"       "term"       "emph"       "mentioned"     }?,     macro.specialPara   } </pre>
--	--

### 9.1.65. <quote>

<quote> (quotation) contains a phrase or passage attributed by the narrator or author to some agency external to the text. [3.3.3. Quotation 4.3.1. Grouped Texts]	
<b>Module</b>	core
<b>Attributes</b>	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <u>att.global.rendition</u> (@rend, @style, @rendition)) ( <u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <u>att.global.analytic</u> (@ana)) ( <u>att.global.facs</u> (@facs)) ( <u>att.global.change</u> (@change)) ( <u>att.global.responsibility</u> (@cert, @resp)) ( <u>att.global.source</u> (@source)) <u>att.typed</u> (@type, @subtype) <u>att.msExcerpt</u> (@defective) <u>att.notated</u> (@notation)
<b>Member of</b>	<u>model.quoteLike</u>
<b>Contained by</b>	<b>analysis:</b> <u>cl</u> <u>phr</u> <u>s</u> <b>core:</b> <u>add</u> <u>del</u> <u>editor</u> <u>hi</u> <u>name</u> <u>note</u> <u>p</u> <u>pubPlace</u> <u>publisher</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>street</u> <u>term</u> <u>title</u> <b>header:</b> <u>change</u> <u>handNote</u> <u>licence</u> <b>linking:</b> <u>ab</u> <u>seg</u> <b>msdescription:</b> <u>accMat</u> <u>objectType</u> <u>stamp</u> <b>namesdates:</b> <u>country</u> <u>orgName</u> <u>persName</u> <u>roleName</u> <u>settlement</u> <b>textcrit:</b> <u>lem</u> <u>rdg</u> <u>witness</u> <b>textstructure:</b> <u>body</u> <u>div</u> <b>transcr:</b> <u>metamark</u> <u>restore</u>
<b>May contain</b>	<b>analysis:</b> <u>c</u> <u>cl</u> <u>interp</u> <u>interpGrp</u> <u>m</u> <u>pc</u> <u>phr</u> <u>s</u> <u>span</u> <u>spanGrp</u> <u>w</u> <b>core:</b> <u>add</u> <u>address</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>p</u> <u>pb</u> <u>ptr</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>term</u> <u>title</u> <b>header:</b> <u>idno</u> <b>linking:</b> <u>ab</u> <u>seg</u> <b>msdescription:</b> <u>objectType</u> <u>stamp</u> <b>namesdates:</b> <u>country</u> <u>listOrg</u> <u>listPerson</u> <u>orgName</u> <u>persName</u> <u>roleName</u> <u>settlement</u> <b>textcrit:</b> <u>app</u> <u>listWit</u> <b>transcr:</b> <u>listTranspose</u> <u>metamark</u> <u>restore</u> <u>subst</u> character data
<b>Note</b>	If a bibliographic citation is supplied for the source of a quotation, the two may be grouped using the <cit> element.
<b>Example</b>	<pre> Lexicography has shown little sign of being affected by the work of followers of J.R. Firth, probably best summarized in his slogan, &lt;quote&gt;You shall know a word by the company it keeps&lt;/quote&gt; &lt;ref&gt;(Firth, 1957)&lt;/ref&gt; </pre>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;macroRef key="macro.specialPara"/&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element quote {   att.global.attributes,   att.typed.attributes,   att.msExcerpt.attributes,   att.notated.attributes,   macro.specialPara } </pre>

### 9.1.66. <rdg>

<rdg> (reading) contains a single reading within a textual variation. [12.1. The Apparatus Entry, Readings, and Witnesses]	
<b>Module</b>	textcrit

<b>Attributes</b>	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source)) <a href="#">att.textCritical</a> (@type, @cause, @varSeq, @require) ( <a href="#">att.written</a> (@hand)) <a href="#">att.witnessed</a> (@wit)

<b>Contained by</b>	<b>analysis:</b> <a href="#">cl</a> <a href="#">phr</a> <a href="#">s</a> <a href="#">span</a> <b>core:</b> <a href="#">add</a> <a href="#">date</a> <a href="#">del</a> <a href="#">editor</a> <a href="#">hi</a> <a href="#">name</a> <a href="#">note</a> <a href="#">p</a> <a href="#">pubPlace</a> <a href="#">publisher</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">rs</a> <a href="#">street</a> <a href="#">term</a> <a href="#">title</a> <b>header:</b> <a href="#">change</a> <a href="#">classCode</a> <a href="#">creation</a> <a href="#">handNote</a> <a href="#">language</a> <a href="#">licence</a> <a href="#">publicationStm</a> <b>linking:</b> <a href="#">ab</a> <a href="#">seg</a> <b>msdescription:</b> <a href="#">accMat</a> <a href="#">objectType</a> <a href="#">stamp</a> <b>namesdates:</b> <a href="#">country</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">roleName</a> <a href="#">settlement</a> <b>textcrit:</b> <a href="#">lem</a> <a href="#">rdg</a> <a href="#">witness</a> <b>transcr:</b> <a href="#">metamark</a> <a href="#">restore</a>
<b>May contain</b>	<b>analysis:</b> <a href="#">c</a> <a href="#">cl</a> <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">m</a> <a href="#">pc</a> <a href="#">phr</a> <a href="#">s</a> <a href="#">span</a> <a href="#">spanGrp</a> <a href="#">w</a> <b>core:</b> <a href="#">add</a> <a href="#">address</a> <a href="#">date</a> <a href="#">del</a> <a href="#">gap</a> <a href="#">graphic</a> <a href="#">hi</a> <a href="#">lb</a> <a href="#">name</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">pb</a> <a href="#">ptr</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">rs</a> <a href="#">term</a> <a href="#">title</a> <b>header:</b> <a href="#">idno</a> <b>linking:</b> <a href="#">seg</a> <b>msdescription:</b> <a href="#">objectType</a> <a href="#">stamp</a> <b>namesdates:</b> <a href="#">country</a> <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">roleName</a> <a href="#">settlement</a> <b>textcrit:</b> <a href="#">app</a> <a href="#">listWit</a> <b>transcr:</b> <a href="#">listTranspose</a> <a href="#">metamark</a> <a href="#">restore</a> <a href="#">subst</a> character data
<b>Note</b>	The <i>target</i> and <i>cRef</i> attributes are mutually exclusive.
<b>Example</b>	See especially <code>&lt;ref target="http://www.natcorp.ox.ac.uk/Texts/A02.xml#s2"&gt;the second sentence&lt;/ref&gt;</code>
<b>Example</b>	See also <code>&lt;ref target="#locution"&gt;s.v. &lt;term&gt;locution&lt;/term&gt;&lt;/ref&gt;</code> .
<b>Schematron</b>	<code>&lt;s:report test="@target and @cRef"&gt;Only one of the attributes @target' and @cRef' may be supplied on &lt;s:name/&gt; &lt;/s:report&gt;</code>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;macroRef key="macro.paraContent"/&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element ref {   att.cReferencing.attributes,   att.declaring.attributes,   att.global.attributes,   att.internetMedia.attributes,   att.pointing.attributes,   att.typed.attributes,   macro.paraContent } </pre>

### 9.1.68. <restore>

<b>&lt;restore&gt;</b> (restore) indicates restoration of text to an earlier state by cancellation of an editorial or authorial marking or instruction. [11.3.1.6. Cancellation of Deletions and Other Markings]	
<b>Module</b>	transcr
<b>Attributes</b>	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <u>att.global.rendition</u> (@rend, @style, @rendition)) ( <u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <u>att.global.analytic</u> (@ana)) ( <u>att.global.facs</u> (@facs)) ( <u>att.global.change</u> (@change)) ( <u>att.global.responsibility</u> (@cert, @resp)) ( <u>att.global.source</u> (@source)) <u>att.transcriptional</u> (@status, @cause, @seq) ( <u>att.editLike</u> (@evidence, @instant)) ( <u>att.written</u> (@hand)) <u>att.typed</u> (@type, @subtype) <u>att.dimensions</u> (@unit, @quantity, @extent, @precision, @scope) ( <u>att.ranging</u> (@atLeast, @atMost, @min, @max, @confidence))
<b>Member of</b>	<u>model.pPart.transcriptional</u>
<b>Contained by</b>	<b>analysis:</b> <u>cl pc phr s w</u> <b>core:</b> <u>add date del editor hi name note p pubPlace publisher q quote ref rs street term title</u> <b>header:</b> <u>change handNote licence</u> <b>linking:</b> <u>ab seg</u> <b>msdescription:</b> <u>accMat objectType stamp</u> <b>namesdates:</b> <u>country orgName persName roleName settlement</u> <b>textcrit:</b> <u>lem rdg</u> <b>transcr:</b> <u>metamark restore</u>
<b>May contain</b>	<b>analysis:</b> <u>c cl interp interpGrp m pc phr s span spanGrp w</u> <b>core:</b> <u>add address date del gap graphic hi lb name note noteGrp pb ptr q quote ref rs term title</u> <b>header:</b> <u>idno</u> <b>linking:</b> <u>seg</u> <b>msdescription:</b> <u>objectType stamp</u> <b>namesdates:</b> <u>country listOrg listPerson orgName persName roleName settlement</u> <b>textcrit:</b> <u>app listWit</u> <b>transcr:</b> <u>listTranspose metamark restore subst</u> character data
<b>Note</b>	On this element, the <i>type</i> attribute categorizes the way that the cancelled intervention has been indicated in some way, for example by means of a marginal note, over-inking, additional markup, etc.
<b>Example</b>	<pre> For I hate this &lt;restore hand="#dhl"   type="marginalStetNote"&gt;   &lt;del&gt;my&lt;/del&gt; &lt;/restore&gt; body </pre>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;macroRef key="macro.paraContent"/&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element restore {   att.global.attributes,   att.transcriptional.attributes,   att.typed.attributes,   att.dimensions.attributes,   macro.paraContent } </pre>

### 9.1.69. <revisionDesc>

<b>&lt;revisionDesc&gt;</b> (revision description) summarizes the revision history for a file. [2.6. The Revision Description 2.1.1. The TEI Header and Its Components]	
<b>Module</b>	header
<b>Attributes</b>	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <u>att.global.rendition</u> (@rend, @style, @rendition)) ( <u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <u>att.global.analytic</u> (@ana)) ( <u>att.global.facs</u>

	(@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.docStatus (@status)
<b>Contained by</b>	<b>header:</b> <u>teiHeader</u>
<b>May contain</b>	<b>header:</b> <u>change</u>
<b>Note</b>	If present on this element, the <i>status</i> attribute should indicate the current status of the document. The same attribute may appear on any <u>&lt;change&gt;</u> to record the status at the time of that change. Conventionally <u>&lt;change&gt;</u> elements should be given in reverse date order, with the most recent change at the start of the list.
<b>Example</b>	<pre>&lt;revisionDesc status="embargoed"&gt;   &lt;change when="1991-11-11" who="#LB"&gt; deleted chapter 10 &lt;/change&gt; &lt;/revisionDesc&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt;   &lt;alternate&gt;     &lt;elementRef key="list"/&gt;     &lt;elementRef key="listChange"/&gt;     &lt;elementRef key="change" minOccurs="1"       maxOccurs="unbounded"/&gt;   &lt;/alternate&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element revisionDesc {   att.global.attributes,   att.docStatus.attributes,   ( list   listChange   change+ ) }</pre>

### 9.1.70. <roleName>

<roleName> (role name) contains a name component which indicates that the referent has a particular role or position in society, such as an official title or rank. [13.2.1. Personal Names]	
<b>Module</b>	namesdates
<b>Attributes</b>	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <u>att.global.rendition</u> (@rend, @style, @rendition)) ( <u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <u>att.global.analytic</u> (@ana)) ( <u>att.global.facs</u> (@facs)) ( <u>att.global.change</u> (@change)) ( <u>att.global.responsibility</u> (@cert, @resp)) ( <u>att.global.source</u> (@source)) <u>att.personal</u> (@full, @sort) ( <u>att.naming</u> (@role, @nymRef) ( <u>att.canonical</u> (@key, @ref))) <u>att.typed</u> (@type, @subtype)
<b>Member of</b>	<u>model.persNamePart</u>
<b>Contained by</b>	<b>analysis:</b> <u>cl</u> <u>phr</u> <u>s</u> <u>span</u> <b>core:</b> <u>add</u> <u>address</u> <u>date</u> <u>del</u> <u>editor</u> <u>hi</u> <u>name</u> <u>note</u> <u>p</u> <u>pubPlace</u> <u>publisher</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>street</u> <u>term</u> <u>title</u> <b>header:</b> <u>change</u> <u>classCode</u> <u>correspAction</u> <u>creation</u> <u>handNote</u> <u>language</u> <u>licence</u> <b>linking:</b> <u>ab</u> <u>seg</u> <b>msdescription:</b> <u>accMat</u> <u>objectType</u> <u>stamp</u> <b>namesdates:</b> <u>country</u> <u>org</u> <u>orgName</u> <u>persName</u> <u>roleName</u> <u>settlement</u> <b>textcrit:</b> <u>lem</u> <u>rdg</u> <u>witness</u> <b>transcr:</b> <u>metamark</u> <u>restore</u>
<b>May contain</b>	<b>analysis:</b> <u>c</u> <u>cl</u> <u>interp</u> <u>interpGrp</u> <u>m</u> <u>pc</u> <u>phr</u> <u>s</u> <u>span</u> <u>spanGrp</u> <u>w</u> <b>core:</b> <u>add</u> <u>address</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>pb</u> <u>ptr</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>term</u> <u>title</u> <b>header:</b> <u>idno</u> <b>linking:</b> <u>seg</u> <b>msdescription:</b> <u>objectType</u> <u>stamp</u> <b>namesdates:</b> <u>country</u> <u>orgName</u> <u>persName</u> <u>roleName</u> <u>settlement</u> <b>textcrit:</b> <u>app</u> <b>transcr:</b> <u>listTranspose</u> <u>metamark</u> <u>restore</u> <u>subst</u> character data
<b>Note</b>	A <u>&lt;roleName&gt;</u> may be distinguished from an <u>&lt;addName&gt;</u> by virtue of the fact that, like a title, it typically exists independently of its holder.

Example	<pre>&lt;persName&gt;   &lt;forename&gt;William&lt;/forename&gt;   &lt;surname&gt;Poulteny&lt;/surname&gt;   &lt;roleName&gt;Earl of Bath&lt;/roleName&gt; &lt;/persName&gt;</pre>
Example	<pre>&lt;p&gt;The &lt;roleName role="#solicitor_general"&gt;S.G.&lt;/roleName&gt; is the only national public official, including the Supreme Court justices, required by statute to be "learned in the law."&lt;/p&gt;</pre>
Example	<pre>&lt;p&gt;   &lt;persName ref="#NJF"&gt;     &lt;roleName role="#solicitor_general"&gt;Solicitor General&lt;/roleName&gt; Noel J. Francisco&lt;/persName&gt;,     representing the administration, asserted in rebuttal that there was nothing to disavow (...)   &lt;persName ref="#NJF"&gt;Francisco&lt;/persName&gt; had violated the scrupulous standard of candor about the facts and   the law that &lt;roleName role="#solicitor_general"&gt;S.G.s&lt;/roleName&gt;, in Republican and Democratic administration   alike, have repeatedly said they must honor. &lt;/p&gt;</pre>
Content model	<pre>&lt;content&gt;   &lt;macroRef key="macro.phraseSeq"/&gt; &lt;/content&gt;</pre>
Schema Declaration	<pre>element roleName {   att.global.attributes,   att.personal.attributes,   att.typed.attributes,   macro.phraseSeq }</pre>

### 9.1.71. <rs>

<rs> (referencing string) contains a general purpose name or referring string. [13.2.1. Personal Names 3.6.1. Referring Strings]	
Module	core
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <u>att.global.rendition</u> (@rend, @style, @rendition)) ( <u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <u>att.global.analytic</u> (@ana)) ( <u>att.global.facs</u> (@facs)) ( <u>att.global.change</u> (@change)) ( <u>att.global.responsibility</u> (@cert, @resp)) ( <u>att.global.source</u> (@source)) <u>att.naming</u> (@role, @nymRef) ( <u>att.canonical</u> (@key, @ref)) <u>att.typed</u> (@type, @subtype)
Member of	<u>model.nameLike</u>

<b>Note</b>	The <seg> element may be used at the encoder's discretion to mark any segments of the text of interest for processing. One use of the element is to mark text features for which no appropriate markup is otherwise defined. Another use is to provide an identifier for some segment which is to be pointed at by some other element—i.e. to provide a target, or a part of a target, for a <ptr> or other similar element.
<b>Example</b>	<pre>&lt;seg&gt;When are you leaving?&lt;/seg&gt; &lt;seg&gt;Tomorrow.&lt;/seg&gt;</pre>
<b>Example</b>	<pre>&lt;s&gt;   &lt;seg rend="caps" type="initial-cap"&gt;So father's only&lt;/seg&gt; glory was the ballfield. &lt;/s&gt;</pre>
<b>Example</b>	<pre>&lt;seg type="preamble"&gt;   &lt;seg&gt;Sigmund, &lt;seg type="patronym"&gt;the son of Volsung&lt;/seg&gt;, was a king in Frankish country.&lt;/seg&gt;   &lt;seg&gt;Sinfliotli was the eldest of his sons ...&lt;/seg&gt;   &lt;seg&gt;Borghild, Sigmund's wife, had a brother ... &lt;/seg&gt; &lt;/seg&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt;   &lt;macroRef key="macro.paraContent"/&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element seg {   att.global.attributes,   att.segLike.attributes,   att.typed.attributes,   att.written.attributes,   att.notated.attributes,   macro.paraContent }</pre>

### 9.1.74. <seriesStmt>

**<seriesStmt>** (series statement) groups information about the series, if any, to which a publication belongs. [2.2.5. The Series Statement 2.2. The File Description]

### 9.1.82. <surface>

<p>&lt;surface&gt; defines a written surface as a two-dimensional coordinate space, optionally grouping one or more graphic representations of that space, zones of interest within that space, and transcriptions of the writing within them. [11.1. Digital Facsimiles 11.2.2. Embedded Transcription]</p>	
<b>Module</b>	transcr
<b>Attributes</b>	<p>Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<a href="#">att.global.rendition</a> (@rend, @style, @rendition)) (<a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<a href="#">att.global.analytic</a> (@ana)) (<a href="#">att.global.facs</a> (@facs)) (<a href="#">att.global.change</a> (@change)) (<a href="#">att.global.responsibility</a> (@cert, @resp)) (<a href="#">att.global.source</a> (@source)) <a href="#">att.coordinated</a> (@start, @ulx, @uly, @lrx, @lry, @points) <a href="#">att.declaring</a> (@decls) <a href="#">att.typed</a> (@type, @subtype)</p> <p><b>attachment</b> describes the method by which this surface is or was connected to the main surface</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.enumerated</a></p> <p><b>Sample values include:</b> <b>glued</b> glued in place</p> <p><b>pinned</b> pinned or stapled in place</p> <p><b>sewn</b> sewn in place</p> <p><b>flipping</b> indicates whether the surface is attached and folded in such a way as to provide two writing surfaces</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.truthValue</a></p>
<b>Contained by</b>	<b>transcr:</b> <a href="#">facsimile</a> <a href="#">surface</a> <a href="#">surfaceGrp</a>
<b>May contain</b>	<b>analysis:</b> <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">span</a> <a href="#">spanGrp</a> <b>core:</b> <a href="#">gap</a> <a href="#">graphic</a> <a href="#">lb</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">pb</a> <b>textcrit:</b> <a href="#">app</a> <b>transcr:</b> <a href="#">listTranspose</a> <a href="#">metamark</a> <a href="#">surface</a> <a href="#">surfaceGrp</a>
<b>Note</b>	<p>The &lt;surface&gt; element represents any two-dimensional space on some physical surface forming part of the source material, such as a piece of paper, a face of a monument, a bill-board, a scroll, a leaf etc.</p> <p>The coordinate space defined by this element may be thought of as a grid <i>lrx</i> - <i>ulx</i> units wide and <i>uly</i> - <i>lry</i> units high.</p> <p>The &lt;surface&gt; element may contain graphic representations or transcriptions of written zones, or both. The coordinate values used by every &lt;zone&gt; element contained by this element are to be understood with reference to the same grid.</p> <p>Where it is useful or meaningful to do so, any grouping of multiple &lt;surface&gt; elements may be indicated using the &lt;surfaceGrp&gt; element.</p>
<b>Example</b>	<pre>&lt;facsimile&gt; &lt;surface ulx="0" uly="0" lrx="200" lry="300"&gt;   &lt;graphic url="Bovelles-49r.png"/&gt; &lt;/surface&gt; &lt;/facsimile&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt; &lt;sequence&gt;</pre>

	<pre> &lt;alternate minOccurs="0" maxOccurs="unbounded"&gt;   &lt;classRef key="model.global"/&gt;   &lt;classRef key="model.labelLike"/&gt;   &lt;classRef key="model.graphicLike"/&gt; &lt;/alternate&gt; &lt;sequence minOccurs="0" maxOccurs="unbounded"&gt;   &lt;alternate&gt;     &lt;elementRef key="zone"/&gt;     &lt;elementRef key="line"/&gt;     &lt;elementRef key="path"/&gt;     &lt;elementRef key="surface"/&gt;     &lt;elementRef key="surfaceGrp"/&gt;   &lt;/alternate&gt;   &lt;classRef key="model.global"     minOccurs="0" maxOccurs="unbounded"/&gt; &lt;/sequence&gt; &lt;/sequence&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element surface {   att.global.attributes,   att.coordinated.attributes,   att.declaring.attributes,   att.typed.attributes,   attribute attachment { text }?,   attribute flipping { text }?,   (     ( model.global   model.labelLike   model.graphicLike )*,     ( ( zone   line   path   surface   surfaceGrp ), model.global* )*   ) } </pre>

### 9.1.83. <surfaceGrp>

<surfaceGrp> defines any kind of useful grouping of written surfaces, for example the recto and verso of a single leaf, which the encoder wishes to treat as a single unit. [11.1. Digital Facsimiles]	
<b>Module</b>	transcr
<b>Attributes</b>	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source)) <a href="#">att.declaring</a> (@decls) <a href="#">att.typed</a> (@type, @subtype)
<b>Contained by</b>	<b>transcr:</b> <a href="#">facsimile</a> <a href="#">surface</a> <a href="#">surfaceGrp</a>
<b>May contain</b>	<b>analysis:</b> <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">span</a> <a href="#">spanGrp</a> <b>core:</b> <a href="#">gap</a> <a href="#">lb</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">pb</a> <b>textcrit:</b> <a href="#">app</a> <b>transcr:</b> <a href="#">listTranspose</a> <a href="#">metamark</a> <a href="#">surface</a> <a href="#">surfaceGrp</a>
<b>Note</b>	Where it is useful or meaningful to do so, any grouping of multiple <surface> elements may be indicated using the <surfaceGrp> elements.
<b>Example</b>	<pre> &lt;sourceDoc&gt;   &lt;surfaceGrp&gt;     &lt;surface ulx="0" uly="0" lrx="200"       lry="300"&gt;       &lt;graphic url="Bovelles-49r.png"/&gt;     &lt;/surface&gt;     &lt;surface ulx="0" uly="0" lrx="200"       lry="300"&gt;       &lt;graphic url="Bovelles-49v.png"/&gt;     &lt;/surface&gt;   &lt;/surfaceGrp&gt; &lt;/sourceDoc&gt; </pre>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;alternate minOccurs="1" maxOccurs="unbounded"&gt;     &lt;classRef key="model.global"/&gt;     &lt;elementRef key="surface"/&gt;     &lt;elementRef key="surfaceGrp"/&gt;   &lt;/alternate&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element surfaceGrp </pre>

	<pre> {   att.global.attributes,   att.declaring.attributes,   att.typed.attributes,   ( model.global   surface   surfaceGrp )+ } </pre>

<b>Note</b>	When this element appears within an <index> element, it is understood to supply the form under which an index entry is to be made for that location. Elsewhere, it is understood simply to indicate that its content is to be regarded as a technical or specialised term. It may be associated with a <gloss> element by means of its <i>ref</i> attribute; alternatively a <gloss> element may point to a <term> element by means of its <i>target</i> attribute. In formal terminological work, there is frequently discussion over whether terms must be atomic or may include multi-word lexical items, symbolic designations, or phraseological

	<p>units. The <code>&lt;term&gt;</code> element may be used to mark any of these. No position is taken on the philosophical issue of what a term can be; the looser definition simply allows the <code>&lt;term&gt;</code> element to be used by practitioners of any persuasion.</p> <p>As with other members of the <code>att.canonical</code> class, instances of this element occurring in a text may be associated with a canonical definition, either by means of a URI (using the <code>ref</code> attribute), or by means of some system-specific code value (using the <code>key</code> attribute). Because the mutually exclusive <code>target</code> and <code>cRef</code> attributes overlap with the function of the <code>ref</code> attribute, they are deprecated and may be removed at a subsequent release.</p>
<b>Example</b>	A computational device that infers structure from grammatical strings of words is known as a <code>&lt;term&gt;parser&lt;/term&gt;</code> , and much of the history of NLP over the last 20 years has been occupied with the design of parsers.
<b>Example</b>	We may define <code>&lt;term xml:id="TDPV1" rend="sc"&gt;discoursal point of view&lt;/term&gt;</code> as <code>&lt;gloss target="#TDPV1"&gt;the relationship, expressed through discourse structure, between the implied author or some other addresser, and the fiction.&lt;/gloss&gt;</code>
<b>Example</b>	We may define <code>&lt;term ref="#TDPV2" rend="sc"&gt;discoursal point of view&lt;/term&gt;</code> as <code>&lt;gloss xml:id="TDPV2"&gt;the relationship, expressed through discourse structure, between the implied author or some other addresser, and the fiction.&lt;/gloss&gt;</code>
<b>Example</b>	We discuss Leech's concept of <code>&lt;term ref="myGlossary.xml#TDPV2" rend="sc"&gt;discoursal point of view&lt;/term&gt;</code> below.
<b>Content model</b>	<pre>&lt;content&gt;   &lt;macroRef key="macro.phraseSeq"/&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element term {   att.global.attributes,   att.declaring.attributes,   att.pointing.attributes,   att.typed.attributes,   att.canonical.attributes,   att.sortable.attributes,   att.cReferencing.attributes,   macro.phraseSeq }</pre>

### 9.1.86. `<text>`

<code>&lt;text&gt;</code> (text) contains a single text of any kind, whether unitary or composite, for example a poem or drama, a collection of essays, a novel, a dictionary, or a corpus sample. [4. Default Text Structure 15.1. Varieties of Composite Text]	
<b>Module</b>	textstructure
<b>Attributes</b>	Attributes <code>att.global</code> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <code>att.global.rendition</code> (@rend, @style, @rendition)) ( <code>att.global.linking</code> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <code>att.global.analytic</code> (@ana)) ( <code>att.global.facs</code> (@facs)) ( <code>att.global.change</code> (@change)) ( <code>att.global.responsibility</code> (@cert, @resp)) ( <code>att.global.source</code> (@source)) <code>att.declaring</code> (@decls) <code>att.typed</code> (@type, @subtype) <code>att.written</code> (@hand)
<b>Member of</b>	<code>model.resource</code>
<b>Contained by</b>	<b>textstructure:</b> <code>TEI</code>
<b>May contain</b>	<b>analysis:</b> <code>interp interpGrp span spanGrp</code> <b>core:</b> <code>gap lb note noteGrp pb</code> <b>textcrit:</b> <code>app</code> <b>textstructure:</b> <code>body</code> <b>transcr:</b> <code>listTranspose metamark</code>
<b>Note</b>	This element should not be used to represent a text which is inserted at an arbitrary point within the structure of another, for example as in an embedded or quoted narrative; the <code>&lt;floatingText&gt;</code> is provided for this purpose.
<b>Example</b>	<pre>&lt;text&gt;   &lt;front&gt;     &lt;docTitle&gt;       &lt;titlePart&gt;Autumn Haze&lt;/titlePart&gt;     &lt;/docTitle&gt;   &lt;/front&gt;   &lt;body&gt;     &lt;l&gt;Is it a dragonfly or a maple leaf&lt;/l&gt;     &lt;l&gt;That settles softly down upon the water?&lt;/l&gt;   &lt;/body&gt;</pre>

	<code>&lt;/text&gt;</code>
<b>Example</b>	<p>The body of a text may be replaced by a group of nested texts, as in the following schematic:</p> <pre> &lt;text&gt;   &lt;front&gt;     &lt;!-- front matter for the whole group --&gt;   &lt;/front&gt;   &lt;group&gt;     &lt;text&gt;       &lt;!-- first text --&gt;     &lt;/text&gt;     &lt;text&gt;       &lt;!-- second text --&gt;     &lt;/text&gt;   &lt;/group&gt; &lt;/text&gt; </pre>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;sequence&gt;     &lt;classRef key="model.global"       minOccurs="0" maxOccurs="unbounded"/&gt;     &lt;sequence minOccurs="0"&gt;       &lt;elementRef key="front"/&gt;       &lt;classRef key="model.global"         minOccurs="0" maxOccurs="unbounded"/&gt;     &lt;/sequence&gt;     &lt;alternate&gt;       &lt;elementRef key="body"/&gt;       &lt;elementRef key="group"/&gt;     &lt;/alternate&gt;     &lt;classRef key="model.global"       minOccurs="0" maxOccurs="unbounded"/&gt;     &lt;sequence minOccurs="0"&gt;       &lt;elementRef key="back"/&gt;       &lt;classRef key="model.global"         minOccurs="0" maxOccurs="unbounded"/&gt;     &lt;/sequence&gt;   &lt;/sequence&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element text {   att.global.attributes,   att.declaring.attributes,   att.typed.attributes,   att.written.attributes,   (     model.global*,     ( front, model.global* )?,     ( body   group ),     model.global*,     ( back, model.global* )?   ) } </pre>

### 9.1.87. `<textClass>`

<code>&lt;textClass&gt;</code> (text classification) groups information which describes the nature or topic of a text in terms of a standard classification scheme, thesaurus, etc. [2.4.3. The Text Classification]	
<b>Module</b>	header
<b>Attributes</b>	Attributes <code>att.global</code> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <code>att.global.rendition</code> (@rend, @style, @rendition)) ( <code>att.global.linking</code> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <code>att.global.analytic</code> (@ana)) ( <code>att.global.facs</code> (@facs)) ( <code>att.global.change</code> (@change)) ( <code>att.global.responsibility</code> (@cert, @resp)) ( <code>att.global.source</code> (@source)) <code>att.declarable</code> (@default)
<b>Member of</b>	<code>model.profileDescPart</code>
<b>Contained by</b>	<b>header:</b> <code>profileDesc</code>
<b>May contain</b>	<b>header:</b> <code>classCode</code> <code>keywords</code>
<b>Example</b>	<pre> &lt;taxonomy&gt;   &lt;category xml:id="acprose"&gt;     &lt;catDesc&gt;Academic prose&lt;/catDesc&gt;   &lt;/category&gt;   &lt;!-- other categories here --&gt; &lt;/taxonomy&gt; &lt;!-- ... --&gt; &lt;textClass&gt;   &lt;catRef target="#acprose"/&gt; </pre>

	<pre> &lt;classCode scheme="http://www.udcc.org"&gt;001.9&lt;/classCode&gt; &lt;keywords scheme="http://authorities.loc.gov"&gt;   &lt;list&gt;     &lt;item&gt;End of the world&lt;/item&gt;     &lt;item&gt;History - philosophy&lt;/item&gt;   &lt;/list&gt; &lt;/keywords&gt; &lt;/textClass&gt; </pre>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;alternate minOccurs="0"     maxOccurs="unbounded"&gt;     &lt;elementRef key="classCode"/&gt;     &lt;elementRef key="catRef"/&gt;     &lt;elementRef key="keywords"/&gt;   &lt;/alternate&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element textClass {   att.global.attributes,   att.declarable.attributes,   ( classCode   catRef   keywords ) * } </pre>

### 9.1.88. <title>

<p>&lt;title&gt; (title) contains a title for any kind of work. [3.12.2.2. Titles, Authors, and Editors 2.2.1. The Title Statement 2.2.5. The Series Statement]</p>	
<b>Module</b>	core
<b>Attributes</b>	<p>Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.canonical</u> (@key, @ref) <u>att.dataable</u> (@calendar, @period) (<u>att.dataable.w3c</u> (@when, @notBefore, @notAfter, @from, @to)) (<u>att.dataable.iso</u> (@when-iso, @notBefore-iso, @notAfter-iso, @from-iso, @to-iso)) (<u>att.dataable.custom</u> (@when-custom, @notBefore-custom, @notAfter-custom, @from-custom, @to-custom, @datingPoint, @datingMethod)) <u>att.typed</u> (type, @subtype)</p> <p>type classifies the title according to some convenient typology.</p> <p><b>Derived from</b> <u>att.typed</u></p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Sample values include:</b> <b>main</b> main title</p> <p><b>sub</b> (subordinate) subtitle, title of part</p> <p><b>alt</b> (alternate) alternate title, often in another language, by which the work is also known</p> <p><b>short</b> abbreviated form of title</p> <p><b>desc</b> (descriptive) descriptive paraphrase of the work functioning as a title</p> <p><b>Note</b> This attribute is provided for convenience in analysing titles and processing them according to their type; where such specialized processing is not necessary, there is no need for such analysis, and the entire title, including subtitles and any parallel titles, may be enclosed within a single &lt;title&gt; element.</p>

	<p>level indicates the bibliographic level for a title, that is, whether it identifies an article, book, journal, series, or unpublished material.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.enumerated</a></p> <p><b>Legal values are:</b></p> <ul style="list-style-type: none"> <li><b>a</b> (analytic) the title applies to an analytic item, such as an article, poem, or other work published as part of a larger item.</li> <li><b>m</b> (monographic) the title applies to a monograph such as a book or other item considered to be a distinct publication, including single volumes of multi-volume works</li> <li><b>j</b> (journal) the title applies to any serial or periodical publication such as a journal, magazine, or newspaper</li> <li><b>s</b> (series) the title applies to a series of otherwise distinct publications such as a collection</li> <li><b>u</b> (unpublished) the title applies to any unpublished material (including theses and dissertations unless published by a commercial press)</li> </ul> <p><b>Note</b> The level of a title is sometimes implied by its context: for example, a title appearing directly within an &lt;analytic&gt; element is <i>ipso facto</i> of level 'a', and one appearing within a &lt;series&gt; element of level 's'. For this reason, the <i>level</i> attribute is not required in contexts where its value can be unambiguously inferred. Where it is supplied in such contexts, its value should not contradict the value implied by its parent element.</p>
<b>Member of</b>	<a href="#">model.emphLike</a>
<b>Contained by</b>	<p><b>analysis:</b> <a href="#">cl</a> <a href="#">phr</a> <a href="#">s</a> <a href="#">span</a></p> <p><b>core:</b> <a href="#">add</a> <a href="#">date</a> <a href="#">del</a> <a href="#">editor</a> <a href="#">hi</a> <a href="#">name</a> <a href="#">note</a> <a href="#">p</a> <a href="#">pubPlace</a> <a href="#">publisher</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">rs</a> <a href="#">street</a> <a href="#">term</a> <a href="#">title</a></p> <p><b>header:</b> <a href="#">change</a> <a href="#">classCode</a> <a href="#">creation</a> <a href="#">handNote</a> <a href="#">language</a> <a href="#">licence</a> <a href="#">seriesStmt</a> <a href="#">titleStmt</a></p> <p><b>linking:</b> <a href="#">ab</a> <a href="#">seg</a></p> <p><b>msdescription:</b> <a href="#">accMat</a> <a href="#">objectType</a> <a href="#">stamp</a></p> <p><b>namesdates:</b> <a href="#">country</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">roleName</a> <a href="#">settlement</a></p> <p><b>textcrit:</b> <a href="#">lem</a> <a href="#">rdg</a> <a href="#">witness</a></p> <p><b>transcr:</b> <a href="#">metamark</a> <a href="#">restore</a></p>
<b>May contain</b>	<p><b>analysis:</b> <a href="#">c</a> <a href="#">cl</a> <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">m</a> <a href="#">pc</a> <a href="#">phr</a> <a href="#">s</a> <a href="#">span</a> <a href="#">spanGrp</a> <a href="#">w</a></p> <p><b>core:</b> <a href="#">add</a> <a href="#">address</a> <a href="#">date</a> <a href="#">del</a> <a href="#">gap</a> <a href="#">graphic</a> <a href="#">hi</a> <a href="#">lb</a> <a href="#">name</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">pb</a> <a href="#">ptr</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">rs</a> <a href="#">term</a> <a href="#">title</a></p> <p><b>header:</b> <a href="#">idno</a></p> <p><b>linking:</b> <a href="#">seg</a></p> <p><b>msdescription:</b> <a href="#">objectType</a> <a href="#">stamp</a></p> <p><b>namesdates:</b> <a href="#">country</a> <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">roleName</a> <a href="#">settlement</a></p> <p><b>textcrit:</b> <a href="#">app</a> <a href="#">listWit</a></p> <p><b>transcr:</b> <a href="#">listTranspose</a> <a href="#">metamark</a> <a href="#">restore</a> <a href="#">subst</a></p> <p>character data</p>
<b>Note</b>	The attributes <i>key</i> and <i>ref</i> , inherited from the class <i>att.canonical</i> may be used to indicate the canonical form for the title; the former, by supplying (for example) the identifier of a record in some external library system; the latter by pointing to an XML element somewhere containing the canonical form of the title.
<b>Example</b>	<pre>&lt;title&gt;Information Technology and the Research Process: Proceedings of a conference held at Cranfield Institute of Technology, UK,</pre>

	18-21 July 1989</title>
<b>Example</b>	<title>Hardy's Tess of the D'Urbervilles: a machine readable edition</title>
<b>Example</b>	<pre>&lt;title type="full"&gt; &lt;title type="main"&gt;Synthèse&lt;/title&gt; &lt;title type="sub"&gt;an international journal for epistemology, methodology and history of science&lt;/title&gt; &lt;/title&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt; &lt;macroRef key="macro.paraContent" /&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element title {   att.global.attributes,   att.typed.attribute.subtype,   att.canonical.attributes,   att.dataable.attributes,   attribute type { text }?,   attribute level { "a"   "m"   "j"   "s"   "u" }?,   macro.paraContent }</pre>

### 9.1.89. <titleStmt>

<titleStmt> (title statement) groups information about the title of a work and those responsible for its content. [2.2.1. The Title Statement 2.2. The File Description]	
<b>Module</b>	header
<b>Attributes</b>	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source))
<b>Contained by</b>	<b>header:</b> <a href="#">fileDesc</a>
<b>May contain</b>	<b>core:</b> <a href="#">editor</a> <a href="#">title</a>
<b>Example</b>	<pre>&lt;titleStmt&gt; &lt;title&gt;Capgrave's Life of St. John Norbert: a machine-readable transcription&lt;/title&gt; &lt;respStmt&gt; &lt;resp&gt;compiled by&lt;/resp&gt; &lt;name&gt;P.J. Lucas&lt;/name&gt; &lt;/respStmt&gt; &lt;/titleStmt&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt; &lt;sequence&gt; &lt;elementRef key="title" minOccurs="1" maxOccurs="unbounded"/&gt; &lt;classRef key="model.respLike" minOccurs="0" maxOccurs="unbounded"/&gt; &lt;/sequence&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element titleStmt { att.global.attributes, ( title+, model.respLike* ) }</pre>

### 9.1.90. <transpose>

<transpose> describes a single textual transposition as an ordered list of at least two pointers specifying the order in which the elements indicated should be re-combined. [11.3.4.5. Transpositions]	
<b>Module</b>	transcr
<b>Attributes</b>	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source))
<b>Contained by</b>	<b>transcr:</b> <a href="#">listTranspose</a>

<b>May contain</b>	<b>core:</b> <u>ptr</u>
<b>Note</b>	Transposition is usually indicated in a document by a metamark such as a wavy line or numbering. The order in which <u>&lt;ptr&gt;</u> elements appear within a <u>&lt;transpose&gt;</u> element should correspond with the desired order, as indicated by the metamark.
<b>Example</b>	<pre>&lt;transpose&gt;   &lt;ptr target="#ib02"/&gt;   &lt;ptr target="#ib01"/&gt; &lt;/transpose&gt;</pre> <p>The transposition recorded here indicates that the content of the element with identifier ib02 should appear before the content of the element with identifier ib01.</p>
<b>Content model</b>	<pre>&lt;content&gt;   &lt;elementRef key="ptr" minOccurs="2"     maxOccurs="unbounded"/&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element transpose { att.global.attributes, ( ptr, ptr, ptr* ) }</pre>

### 9.1.91. <variantEncoding>

<variantEncoding> (variant encoding) declares the method used to encode text-critical variants. [12.1.1. The Apparatus Entry]	
<b>Module</b>	textcrit
<b>Attributes</b>	<p>Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source))</p> <p>method indicates which method is used to encode the apparatus of variants.</p> <p><b>Status</b> Required</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Legal values are:</b></p> <ul style="list-style-type: none"> <li><b>ca-</b> apparatus uses line numbers or other canonical reference scheme referenced in a base text.</li> <li><b>er-</b></li> <li><b>enced</b></li> <li><b>dou-</b></li> <li><b>ble-endpoint</b> indicates the precise locations of the beginning and ending of each lemma relative to a base text.</li> <li><b>parallel-segmentation</b> alternate readings of a passage are given in parallel in the text; no notion of a base text is necessary.</li> </ul> <p><b>Note</b> The value 'parallel-segmentation' requires in-line encoding of the apparatus.</p> <p>location indicates whether the apparatus appears within the running text or external to it.</p> <p><b>Status</b> Required</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Schematron</b> &lt;sch:rule context="tei:variantEncoding"&gt; &lt;sch:assert test="(@location != 'external') or (@method != 'parallel-segmentation')"&gt; The @location value "external" is</p>

	<p>inconsistent with the parallel-segmentation method of apparatus markup.&lt;/sch:assert&gt; &lt;/sch:rule&gt;</p> <p><b>Legal values in- are: ter- nal</b></p> <p><b>ex- ter- nal</b></p> <p><b>Note</b> The value 'external' is inconsistent with the parallel-segmentation method of apparatus markup.</p>
<b>Member of</b>	<a href="#">model.encodingDescPart</a>
<b>Contained by</b>	<b>header:</b> <a href="#">encodingDesc</a>
<b>May contain</b>	Empty element
<b>Example</b>	<pre>&lt;variantEncoding method="location-referenced" location="external"/&gt;</pre>
<b>Content model</b>	<pre>&lt;content&gt; &lt;empty/&gt; &lt;/content&gt;</pre>
<b>Schema Declaration</b>	<pre>element variantEncoding {   att.global.attributes,   attribute method   {     "location-referenced"   "double-end-point"   "parallel-segmentation"   },   attribute location { "internal"   "external" },   empty }</pre>

### 9.1.92. <w>

<w> (word) represents a grammatical (not necessarily orthographic) word. [17.1. Linguistic Segment Categories 17.4.2. Lightweight Linguistic Annotation]	
<b>Module</b>	analysis
<b>Attributes</b>	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source)) <a href="#">att.segLike</a> (@function) ( <a href="#">att.datcat</a> (@datcat, @valueDatcat)) ( <a href="#">att.fragmentable</a> (@part)) <a href="#">att.typed</a> (@type, @subtype) <a href="#">att.linguistic</a> (@lemma, @lemmaRef, @pos, @msd, @join) ( <a href="#">att.lexicographic.normalized</a> (@norm, @orig)) <a href="#">att.notated</a> (@notation)

--	---

### 9.1.93. <witness>

<b>&lt;witness&gt;</b> (witness) contains either a description of a single witness referred to within the critical apparatus, or a list of witnesses which is to be referred to by a single sigil. [12.1. The Apparatus Entry, Readings, and Witnesses]	
<b>Module</b>	textcrit
<b>Attributes</b>	Attributes <a href="#">att.global</a> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) ( <a href="#">att.global.rendition</a> (@rend, @style, @rendition)) ( <a href="#">att.global.linking</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) ( <a href="#">att.global.analytic</a> (@ana)) ( <a href="#">att.global.facs</a> (@facs)) ( <a href="#">att.global.change</a> (@change)) ( <a href="#">att.global.responsibility</a> (@cert, @resp)) ( <a href="#">att.global.source</a> (@source)) <a href="#">att.sortable</a> (@sortKey)
<b>Contained by</b>	<b>textcrit:</b> <a href="#">listWit</a>
<b>May contain</b>	<b>core:</b> <a href="#">address</a> <a href="#">date</a> <a href="#">hi</a> <a href="#">name</a> <a href="#">note</a> <a href="#">ptr</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">rs</a> <a href="#">term</a> <a href="#">title</a> <b>header:</b> <a href="#">idno</a> <b>msdescription:</b> <a href="#">objectType</a> <a href="#">stamp</a> <b>namesdates:</b> <a href="#">country</a> <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">roleName</a> <a href="#">settlement</a> <b>textcrit:</b> <a href="#">listWit</a> <b>transcr:</b> <a href="#">subst</a> character data
<b>Note</b>	The content of the <witness> element may give bibliographic information about the witness or witness group, or it may be empty.
<b>Example</b>	<pre> &lt;listWit&gt;   &lt;witness xml:id="EL"&gt;Ellesmere, Huntingdon Library 26.C.9&lt;/witness&gt;   &lt;witness xml:id="HG"&gt;Hengwrt, National Library of Wales,     Aberystwyth, Peniarth 392D&lt;/witness&gt;   &lt;witness xml:id="RA2"&gt;Bodleian Library Rawlinson Poetic 149     (see further &lt;ptr target="http://www.examples.com/MSdescs#MSRP149"/&gt;&lt;/witness&gt; &lt;/listWit&gt; </pre>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;alternate minOccurs="0"     maxOccurs="unbounded"&gt;     &lt;textNode/&gt;     &lt;classRef key="model.limitedPhrase"/&gt;     &lt;classRef key="model.inter"/&gt;     &lt;elementRef key="note"/&gt;     &lt;elementRef key="object"/&gt;   &lt;/alternate&gt; &lt;/content&gt; </pre>
<b>Schema Declaration</b>	<pre> element witness {   att.global.attributes,   att.sortable.attributes,   ( text   model.limitedPhrase   model.inter   note   object ) * } </pre>

## 9.2. Model classes

### 9.2.1. model.addrPart

<b>model.addrPart</b> groups elements such as names or postal codes which may appear as part of a postal address. [3.6.2. Addresses]	
<b>Module</b>	tei

Used by	address
Members	<a href="#">model.nameLike</a> [ <a href="#">model.nameLike.agent</a> [ <a href="#">name</a> <a href="#">orgName</a> <a href="#">persName</a> ] <a href="#">model.offsetLike</a> <a href="#">model.persNamePart</a> [ <a href="#">roleName</a> ] <a href="#">model.placeStateLike</a> [ <a href="#">model.placeNamePart</a> [ <a href="#">country</a> <a href="#">settlement</a> ]] <a href="#">idno</a> <a href="#">rs</a> ] <a href="#">postCode</a> <a href="#">street</a>

### 9.2.2. *model.addressLike*

<b>model.addressLike</b> groups elements used to represent a postal or email address. [1. The TEI Infrastructure]	
Module	tei
Used by	<a href="#">model.correspActionPart</a> <a href="#">model.pPart.data</a>
Members	<a href="#">address</a>

### 9.2.3. *model.attributable*

<b>model.attributable</b> groups elements that contain a word or phrase that can be attributed to a source. [3.3.3. Quotation 4.3.2. Floating Texts]	
Module	tei
Used by	<a href="#">macro.phraseSeq</a> <a href="#">model.inter</a>
Members	<a href="#">model.quoteLike</a> [ <a href="#">quote</a> ]

### 9.2.4. *model.availabilityPart*

<b>model.availabilityPart</b> groups elements such as licences and paragraphs of text which may appear as part of an availability statement [2.2.4. Publication, Distribution, Licensing, etc.]	
Module	tei
Used by	<a href="#">availability</a>
Members	<a href="#">licence</a>

### 9.2.5. *model.common*

<b>model.common</b> groups common chunk- and inter-level elements. [1.3. The TEI Class System]	
Module	tei
Used by	<a href="#">body</a> <a href="#">div</a>
Members	<a href="#">model.divPart</a> [ <a href="#">model.lLike</a> <a href="#">model.pLike</a> [ <a href="#">ab</a> <a href="#">p</a> ]] <a href="#">model.inter</a> [ <a href="#">model.attributable</a> [ <a href="#">model.quoteLike</a> [ <a href="#">quote</a> ]] <a href="#">model.biblLike</a> <a href="#">model.egLike</a> <a href="#">model.labelLike</a> <a href="#">model.listLike</a> [ <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">listWit</a> ] <a href="#">model.oddDecl</a> <a href="#">model.stageLike</a> ] <a href="#">q</a>
Note	This class defines the set of chunk- and inter-level elements; it is used in many content models, including those for textual divisions.

### 9.2.6. *model.correspActionPart*

<b>model.correspActionPart</b> groups elements which define the parts (usually names, dates and places) of one action related to the correspondence.	
Module	tei
Used by	<a href="#">correspAction</a>
Members	<a href="#">model.addressLike</a> [ <a href="#">address</a> ] <a href="#">model.dateLike</a> [ <a href="#">date</a> ] <a href="#">model.nameLike</a> [ <a href="#">model.nameLike.agent</a> [ <a href="#">name</a> <a href="#">orgName</a> <a href="#">persName</a> ] <a href="#">model.offsetLike</a> <a href="#">model.persNamePart</a> [ <a href="#">roleName</a> ] <a href="#">model.placeStateLike</a> [ <a href="#">model.placeNamePart</a> [ <a href="#">country</a> <a href="#">settlement</a> ]] <a href="#">idno</a> <a href="#">rs</a> ] <a href="#">note</a> <a href="#">noteGrp</a>

### 9.2.7. *model.correspDescPart*

<b>model.correspDescPart</b> groups together metadata elements for describing correspondence	
Module	tei
Used by	<a href="#">correspDesc</a>
Members	<a href="#">correspAction</a> <a href="#">note</a> <a href="#">noteGrp</a>

### 9.2.8. *model.dateLike*

<b>model.dateLike</b> groups elements containing temporal expressions. [3.6.4. Dates and Times 13.4. Dates]	
Module	tei
Used by	<a href="#">model.correspActionPart</a> <a href="#">model.pPart.data</a>
Members	<a href="#">date</a>

### 9.2.9. *model.divBottom*

<b>model.divBottom</b> groups elements appearing at the end of a text division. [4.2. Elements Common to All Divisions]	
Module	tei
Used by	<a href="#">body div</a>
Members	<a href="#">model.divBottomPart</a> <a href="#">model.divWrapper</a>

### 9.2.10. *model.divLike*

<b>model.divLike</b> groups elements used to represent un-numbered generic structural divisions.	
Module	tei
Used by	<a href="#">body div</a> <a href="#">lem rdg</a>
Members	<a href="#">div</a>

### 9.2.11. *model.divPart*

<b>model.divPart</b> groups paragraph-level elements appearing directly within divisions. [1.3. The TEI Class System]	
Module	tei
Used by	<a href="#">lem macro.specialPara</a> <a href="#">model.common rdg</a>
Members	<a href="#">model.lLike</a> <a href="#">model.pLike</a> [ <a href="#">ab p</a> ]
Note	Note that this element class does not include members of the <a href="#">model.inter</a> class, which can appear either within or between paragraph-level items.

### 9.2.12. *model.divTop*

<b>model.divTop</b> groups elements appearing at the beginning of a text division. [4.2. Elements Common to All Divisions]	
Module	tei
Used by	<a href="#">body div</a>
Members	<a href="#">model.divTopPart</a> [ <a href="#">model.headLike</a> ] <a href="#">model.divWrapper</a>

### 9.2.13. *model.divTopPart*

<b>model.divTopPart</b> groups elements which can occur only at the beginning of a text division. [4.6. Title Pages]	
Module	tei
Used by	<a href="#">model.divTop</a>
Members	<a href="#">model.headLike</a>

### 9.2.14. *model.emphLike*

<b>model.emphLike</b> groups phrase-level elements which are typographically distinct and to which a specific function can be attributed. [3.3. Highlighting and Quotation]	
Module	tei
Used by	<a href="#">model.highlighted</a> <a href="#">model.limitedPhrase</a>
Members	<a href="#">term title</a>

### 9.2.15. *model.encodingDescPart*

<b>model.encodingDescPart</b> groups elements which may be used inside <a href="#">&lt;encodingDesc&gt;</a> and appear multiple times.	
--	--

<b>Module</b>	tei
<b>Used by</b>	<a href="#">encodingDesc</a>
<b>Members</b>	<a href="#">variantEncoding</a>

### 9.2.16. *model.global*

<b>model.global</b> groups elements which may appear at any point within a TEI text. [1.3. The TEI Class System]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">address</a> <a href="#">body</a> <a href="#">date</a> <a href="#">div</a> <a href="#">lem</a> <a href="#">m</a> <a href="#">macro.paraContent</a> <a href="#">macro.phraseSeq</a> <a href="#">macro.phraseSeq.limited</a> <a href="#">macro.specialPara</a> <a href="#">person</a> <a href="#">rdg</a> <a href="#">surface</a> <a href="#">surfaceGrp</a> <a href="#">text</a> <a href="#">w</a>
<b>Members</b>	<a href="#">model.global.edit</a> [ <a href="#">app</a> <a href="#">gap</a> ] <a href="#">model.global.meta</a> [ <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">listTranspose</a> <a href="#">span</a> <a href="#">spanGrp</a> ] <a href="#">model.milestoneLike</a> [ <a href="#">lb</a> <a href="#">pb</a> ] <a href="#">model.noteLike</a> [ <a href="#">note</a> <a href="#">noteGrp</a> ] <a href="#">metamark</a>

### 9.2.17. *model.global.edit*

<b>model.global.edit</b> groups globally available elements which perform a specifically editorial function. [1.3. The TEI Class System]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">model.global</a>
<b>Members</b>	<a href="#">app</a> <a href="#">gap</a>

### 9.2.18. *model.global.meta*

<b>model.global.meta</b> groups globally available elements which describe the status of other elements. [1.3. The TEI Class System]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">model.global</a>
<b>Members</b>	<a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">listTranspose</a> <a href="#">span</a> <a href="#">spanGrp</a>
<b>Note</b>	Elements in this class are typically used to hold groups of links or of abstract interpretations, or by provide indications of certainty etc. It may find be convenient to localize all metadata elements, for example to contain them within the same division as the elements that they relate to; or to locate them all to a division of their own. They may however appear at any point in a TEI text.

### 9.2.19. *model.graphicLike*

<b>model.graphicLike</b> groups elements containing images, formulae, and similar objects. [3.10. Graphics and Other Non-textual Components]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">facsimile</a> <a href="#">model.phrase</a> <a href="#">surface</a>
<b>Members</b>	<a href="#">graphic</a>

### 9.2.20. *model.hiLike*

<b>model.hiLike</b> groups phrase-level elements which are typographically distinct but to which no specific function can be attributed. [3.3. Highlighting and Quotation]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">m</a> <a href="#">model.highlighted</a> <a href="#">model.limitedPhrase</a> <a href="#">w</a>
<b>Members</b>	<a href="#">hi</a> <a href="#">q</a>

### 9.2.21. *model.highlighted*

<b>model.highlighted</b> groups phrase-level elements which are typographically distinct. [3.3. Highlighting and Quotation]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">model.phrase</a>
<b>Members</b>	<a href="#">model.emphLike</a> [ <a href="#">term</a> <a href="#">title</a> ] <a href="#">model.hiLike</a> [ <a href="#">hi</a> <a href="#">q</a> ]

### 9.2.22. *model.inter*

<b>model.inter</b> groups elements which can appear either within or between paragraph-like elements. [1.3. The TEI Class System]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">lem</a> <a href="#">macro.paraContent</a> <a href="#">macro.specialPara</a> <a href="#">model.common</a> <a href="#">rdg</a> <a href="#">witness</a>
<b>Members</b>	<a href="#">model.attributable</a> [ <a href="#">model.quoteLike</a> [ <a href="#">quote</a> ]] <a href="#">model.biblLike</a> <a href="#">model.egLike</a> <a href="#">model.labelLike</a> <a href="#">model.listLike</a> [ <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">listWit</a> ] <a href="#">model.oddDecl</a> <a href="#">model.stageLike</a>

### 9.2.23. *model.limitedPhrase*

<b>model.limitedPhrase</b> groups phrase-level elements excluding those elements primarily intended for transcription of existing sources. [1.3. The TEI Class System]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">creation</a> <a href="#">macro.phraseSeq.limited</a> <a href="#">witness</a>
<b>Members</b>	<a href="#">model.emphLike</a> [ <a href="#">term</a> <a href="#">title</a> ] <a href="#">model.hiLike</a> [ <a href="#">hi</a> <a href="#">q</a> ] <a href="#">model.pPart.data</a> [ <a href="#">model.addressLike</a> [ <a href="#">address</a> ] <a href="#">model.dateLike</a> [ <a href="#">date</a> ] <a href="#">model.measureLike</a> <a href="#">model.nameLike</a> [ <a href="#">model.nameLike.agent</a> [ <a href="#">name</a> <a href="#">orgName</a> <a href="#">persName</a> ] <a href="#">model.offsetLike</a> <a href="#">model.persNamePart</a> [ <a href="#">roleName</a> ] <a href="#">model.placeStateLike</a> [ <a href="#">model.placeNamePart</a> [ <a href="#">country</a> <a href="#">settlement</a> ]] <a href="#">idno</a> <a href="#">rs</a> ]] <a href="#">model.pPart.editorial</a> [ <a href="#">subst</a> ] <a href="#">model.pPart.msdesc</a> [ <a href="#">objectType</a> <a href="#">stamp</a> ] <a href="#">model.phrase.xml</a> <a href="#">model.ptrLike</a> [ <a href="#">ptr</a> <a href="#">ref</a> ]

### 9.2.24. *model.listLike*

<b>model.listLike</b> groups list-like elements. [3.8. Lists]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">model.inter</a> <a href="#">sourceDesc</a>
<b>Members</b>	<a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">listWit</a>

### 9.2.25. *model.milestoneLike*

<b>model.milestoneLike</b> groups milestone-style elements used to represent reference systems. [1.3. The TEI Class System 3.11.3. Milestone Elements]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">model.global</a> <a href="#">org</a> <a href="#">subst</a>
<b>Members</b>	<a href="#">lb</a> <a href="#">pb</a>

### 9.2.26. *model.nameLike*

<b>model.nameLike</b> groups elements which name or refer to a person, place, or organization.	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">model.addrPart</a> <a href="#">model.correspActionPart</a> <a href="#">model.pPart.data</a> <a href="#">org</a>
<b>Members</b>	<a href="#">model.nameLike.agent</a> [ <a href="#">name</a> <a href="#">orgName</a> <a href="#">persName</a> ] <a href="#">model.offsetLike</a> <a href="#">model.persNamePart</a> [ <a href="#">roleName</a> ] <a href="#">model.placeStateLike</a> [ <a href="#">model.placeNamePart</a> [ <a href="#">country</a> <a href="#">settlement</a> ]] <a href="#">idno</a> <a href="#">rs</a>
<b>Note</b>	A superset of the naming elements that may appear in datelines, addresses, statements of responsibility, etc.

### 9.2.27. *model.nameLike.agent*

<b>model.nameLike.agent</b> groups elements which contain names of individuals or corporate bodies. [3.6. Names, Numbers, Dates, Abbreviations, and Addresses]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">model.nameLike</a>
<b>Members</b>	<a href="#">name</a> <a href="#">orgName</a> <a href="#">persName</a>
<b>Note</b>	This class is used in the content model of elements which reference names of people or organizations.

### 9.2.28. *model.noteLike*

<b>model.noteLike</b> groups globally-available note-like elements. [3.9. Notes, Annotation, and Indexing]	
Module	tei
Used by	app model.global org
Members	note noteGrp

### 9.2.29. *model.orgPart*

<b>model.orgPart</b> groups elements which form part of the description of an organization.	
Module	tei
Used by	org
Members	model.eventLike listOrg listPerson

### 9.2.30. *model.pLike*

<b>model.pLike</b> groups paragraph-like elements.	
Module	tei
Used by	availability correspAction correspDesc encodingDesc langUsage model.divPart org particDesc person physDesc publicationStmnt seriesStmnt sourceDesc
Members	ab p

### 9.2.31. *model.pPart.data*

<b>model.pPart.data</b> groups phrase-level elements containing names, dates, numbers, measures, and similar data. [3.6. Names, Numbers, Dates, Abbreviations, and Addresses]	
Module	tei
Used by	model.limitedPhrase model.phrase
Members	model.addressLike[address] model.dateLike[date] model.measureLike model.nameLike[model.nameLike.agent[name orgName persName] model.offsetLike model.persNamePart[roleName] model.placeStateLike[model.placeNamePart[country settlement]] id-no rs]

### 9.2.32. *model.pPart.edit*

<b>model.pPart.edit</b> groups phrase-level elements for simple editorial correction and transcription. [3.5. Simple Editorial Changes]	
Module	tei
Used by	model.phrase pc w
Members	model.pPart.editorial[subst] model.pPart.transcriptional[add del restore]

### 9.2.33. *model.pPart.editorial*

<b>model.pPart.editorial</b> groups phrase-level elements for simple editorial interventions that may be useful both in transcribing and in authoring. [3.5. Simple Editorial Changes]	
Module	tei
Used by	model.limitedPhrase model.pPart.edit
Members	subst

### 9.2.34. *model.pPart.msdesc*

<b>model.pPart.msdesc</b> groups phrase-level elements used in manuscript description. [10. Manuscript Description]	
Module	tei
Used by	model.limitedPhrase model.phrase
Members	objectType stamp

### 9.2.35. *model.pPart.transcriptional*

<b>model.pPart.transcriptional</b> groups phrase-level elements used for editorial transcription of pre-existing source materials. [3.5. Simple Editorial Changes]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">model.pPart.edit</a>
<b>Members</b>	<a href="#">add</a> <a href="#">del</a> <a href="#">restore</a>

### 9.2.36. *model.persNamePart*

<b>model.persNamePart</b> groups elements which form part of a personal name. [13.2.1. Personal Names]	
<b>Module</b>	namesdates
<b>Used by</b>	<a href="#">model.nameLike</a>
<b>Members</b>	<a href="#">roleName</a>

### 9.2.37. *model.persStateLike*

<b>model.persStateLike</b> groups elements describing changeable characteristics of a person which have a definite duration, for example occupation, residence, or name.	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">model.personPart</a>
<b>Members</b>	<a href="#">persName</a>
<b>Note</b>	These characteristics of an individual are typically a consequence of their own action or that of others.

### 9.2.38. *model.personLike*

<b>model.personLike</b> groups elements which provide information about people and their relationships.	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">listPerson</a> <a href="#">org</a> <a href="#">particDesc</a>
<b>Members</b>	<a href="#">org</a> <a href="#">person</a>

### 9.2.39. *model.personPart*

<b>model.personPart</b> groups elements which form part of the description of a person. [15.2.2. The Participant Description]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">person</a>
<b>Members</b>	<a href="#">model.biblLike</a> <a href="#">model.eventLike</a> <a href="#">model.persStateLike[persName]</a> <a href="#">idno</a> <a href="#">name</a>

### 9.2.40. *model.phrase*

<b>model.phrase</b> groups elements which can occur at the level of individual words or phrases. [1.3. The TEI Class System]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">date</a> <a href="#">lem</a> <a href="#">macro.paraContent</a> <a href="#">macro.phraseSeq</a> <a href="#">macro.specialPara</a> <a href="#">rdg</a>
<b>Members</b>	<a href="#">model.graphicLike[graphic]</a> <a href="#">model.highlighted[model.emphLike[term title] model.hi-Like[hi q]]</a> <a href="#">model.lPart</a> <a href="#">model.pPart.data[model.addressLike[address] model.dateLike[date] model.measureLike model.nameLike[model.nameLike.agent[name orgName persName] model.offsetLike model.persNamePart[roleName] model.placeStateLike[model.place-NamePart[country settlement]] idno rs]]</a> <a href="#">model.pPart.edit[model.pPart.editorial[subst] model.pPart.transcriptional[add del restore]]</a> <a href="#">model.pPart.msdesc[objectType stamp]</a> <a href="#">model.phrase.xml</a> <a href="#">model.ptrLike[ptr ref]</a> <a href="#">model.segLike[c cl m pc phr s seg w]</a> <a href="#">model.specDescLike</a>
<b>Note</b>	This class of elements can occur within paragraphs, list items, lines of verse, etc.

### 9.2.41. *model.physDescPart*

<b>model.physDescPart</b> groups specialized elements forming part of the physical description of a manuscript or similar written source.	
<b>Module</b>	msdescription
<b>Used by</b>	<a href="#">physDesc</a>
<b>Members</b>	<a href="#">accMat</a>

### 9.2.42. *model.placeNamePart*

<b>model.placeNamePart</b> groups elements which form part of a place name. [13.2.3. Place Names]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">model.placeStateLike</a>
<b>Members</b>	<a href="#">country</a> <a href="#">settlement</a>

### 9.2.43. *model.placeStateLike*

<b>model.placeStateLike</b> groups elements which describe changing states of a place.	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">model.nameLike</a>
<b>Members</b>	<a href="#">model.placeNamePart</a> [ <a href="#">country</a> <a href="#">settlement</a> ]

### 9.2.44. *model.profileDescPart*

<b>model.profileDescPart</b> groups elements which may be used inside <a href="#">&lt;profileDesc&gt;</a> and appear multiple times.	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">profileDesc</a>
<b>Members</b>	<a href="#">correspDesc</a> <a href="#">creation</a> <a href="#">handNotes</a> <a href="#">langUsage</a> <a href="#">listTranspose</a> <a href="#">particDesc</a> <a href="#">textClass</a>

### 9.2.45. *model.ptrLike*

<b>model.ptrLike</b> groups elements used for purposes of location and reference. [3.7. Simple Links and Cross-References]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">model.limitedPhrase</a> <a href="#">model.phrase</a> <a href="#">model.publicationStmntPart.detail</a>
<b>Members</b>	<a href="#">ptr</a> <a href="#">ref</a>

### 9.2.46. *model.publicationStmntPart.agency*

<b>model.publicationStmntPart.agency</b> groups the child elements of a <a href="#">&lt;publicationStmnt&gt;</a> element of the TEI header that indicate an authorising agent. [2.2.4. Publication, Distribution, Licensing, etc.]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">publicationStmnt</a>
<b>Members</b>	<a href="#">publisher</a>
<b>Note</b>	The ‘agency’ child elements, while not required, are required if one of the ‘detail’ child elements is to be used. It is not valid to have a ‘detail’ child element without a preceding ‘agency’ child element. See also <a href="#">model.publicationStmntPart.detail</a> .

### 9.2.47. *model.publicationStmntPart.detail*

<b>model.publicationStmntPart.detail</b> groups the agency-specific child elements of the <a href="#">&lt;publicationStmnt&gt;</a> element of the TEI header. [2.2.4. Publication, Distribution, Licensing, etc.]	
<b>Module</b>	tei
<b>Used by</b>	<a href="#">publicationStmnt</a>
<b>Members</b>	<a href="#">model.ptrLike</a> [ <a href="#">ptr</a> <a href="#">ref</a> ] <a href="#">address</a> <a href="#">availability</a> <a href="#">date</a> <a href="#">idno</a> <a href="#">pubPlace</a>
<b>Note</b>	A ‘detail’ child element may not occur unless an ‘agency’ child element precedes it.

	See also <code>model.publicationStmtPart.agency</code> .
--	--

### 9.2.48. *model.quoteLike*

<b>model.quoteLike</b> groups elements used to directly contain quotations.	
Module	tei
Used by	<code>model.attributable</code>
Members	<code>quote</code>

### 9.2.49. *model.rdgLike*

<b>model.rdgLike</b> groups elements which contain a single reading, other than the lemma, within a textual variation. [12.1. The Apparatus Entry, Readings, and Witnesses]	
Module	textcrit
Used by	<code>app</code>
Members	<code>rdg</code>
Note	This class allows for variants of the <code>&lt;rdg&gt;</code> element to be easily created via TEI customizations.

### 9.2.50. *model.resource*

<b>model.resource</b> groups separate elements which constitute the content of a digital resource, as opposed to its metadata. [1.3. The TEI Class System]	
Module	tei
Used by	TEI
Members	<code>facsimile</code> <code>text</code>

### 9.2.51. *model.respLike*

<b>model.respLike</b> groups elements which are used to indicate intellectual or other significant responsibility, for example within a bibliographic element.	
Module	tei
Used by	<code>titleStmt</code>
Members	<code>editor</code>

### 9.2.52. *model.segLike*

<b>model.segLike</b> groups elements used for arbitrary segmentation. [16.3. Blocks, Segments, and Anchors 17.1. Linguistic Segment Categories]	
Module	tei
Used by	<code>model.phrase</code>
Members	<code>c</code> <code>cl</code> <code>m</code> <code>pc</code> <code>phr</code> <code>s</code> <code>seg</code> <code>w</code>
Note	The principles on which segmentation is carried out, and any special codes or attribute values used, should be defined explicitly in the <code>&lt;segmentation&gt;</code> element of the <code>&lt;encodingDesc&gt;</code> within the associated TEI header.

### 9.2.53. *model.teiHeaderPart*

<b>model.teiHeaderPart</b> groups high level elements which may appear more than once in a TEI header.	
Module	tei
Used by	<code>teiHeader</code>
Members	<code>encodingDesc</code> <code>profileDesc</code>

## 9.3. Attribute classes

### 9.3.1. *att.anchoring*

<b>att.anchoring</b> (anchoring) provides attributes for use on annotations, e.g. notes and groups of notes describing the existence and position of an anchor for annotations.
---

<b>Module</b>	tei
<b>Members</b>	<u>note</u> <u>noteGrp</u>
<b>Attributes</b>	<p>Attributes</p> <p><b>anchored</b> (anchored) indicates whether the copy text shows the exact place of reference for the note.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.truthValue</u></p> <p><b>Default</b> true</p> <p><b>Note</b> In modern texts, notes are usually anchored by means of explicit footnote or endnote symbols. An explicit indication of the phrase or line annotated may however be used instead (e.g. 'page 218, lines 3–4'). The <i>anchored</i> attribute indicates whether any explicit location is given, whether by symbol or by prose cross-reference. The value true indicates that such an explicit location is indicated in the copy text; the value false indicates that the copy text does not indicate a specific place of attachment for the note. If the specific symbols used in the copy text at the location the note is anchored are to be recorded, use the <i>n</i> attribute.</p> <p><b>targetEnd</b> (target end) points to the end of the span to which the note is attached, if the note is not embedded in the text at that point.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1–# occurrences of <u>teidata.pointer</u> separated by white-space</p> <p><b>Note</b> This attribute is retained for backwards compatibility; it may be removed at a subsequent release of the Guidelines. The recommended way of pointing to a span of elements is by means of the <i>range</i> function of XPointer, as further described in 16.2.4.6. <i>range()</i>.</p>
<b>Example</b>	<pre>&lt;p&gt;(…) tamen reuerendos dominos archiepiscopum et canonicos Leopolienses necnon episcopum in duplicibus Quatuor temporibus&lt;anchor xml:id="A55234"/&gt; totaliter expeditui...&lt;/p&gt; &lt;!-- elsewhere in the document --&gt; &lt;noteGrp targetEnd="#A55234"&gt;   &lt;note xml:lang="en"&gt; Quatuor Tempora, so called dry fast days.   &lt;/note&gt;   &lt;note xml:lang="pl"&gt; Quatuor Tempora, tzw. Suche dni postne.   &lt;/note&gt; &lt;/noteGrp&gt;</pre>

### 9.3.2. att.ascribed

<b>att.ascribed</b> provides attributes for elements representing speech or action that can be ascribed to a specific individual. [3.3.3. Quotation 8.3. Elements Unique to Spoken Texts]	
<b>Module</b>	tei
<b>Members</b>	<u>att.ascribed.directed[q]</u> <u>change</u>
<b>Attributes</b>	<p>Attributes</p> <p><b>who</b> indicates the person, or group of people, to whom the element content is ascribed.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1–# occurrences of <u>teidata.pointer</u> separated by white-space</p> <p>In the following example from Hamlet, speeches (&lt;sp&gt;) in the body of the play are linked to &lt;castItem&gt; elements in the &lt;castList&gt; using the <i>who</i> attribute.</p> <pre>&lt;castItem type="role"&gt;   &lt;role xml:id="Barnardo"&gt;Barnardo&lt;/role&gt; &lt;/castItem&gt; &lt;castItem type="role"&gt;   &lt;role xml:id="Francisco"&gt;Francisco&lt;/role&gt;   &lt;roleDesc&gt;a soldier&lt;/roleDesc&gt;</pre>

	<pre> &lt;/castItem&gt; &lt;!-- ... --&gt; &lt;sp who="#Barnardo"&gt;   &lt;speaker&gt;Bernardo&lt;/speaker&gt;   &lt;l n="1"&gt;Who's there?&lt;/l&gt; &lt;/sp&gt; &lt;sp who="#Francisco"&gt;   &lt;speaker&gt;Francisco&lt;/speaker&gt;   &lt;l n="2"&gt;Nay, answer me: stand, and unfold yourself.&lt;/l&gt; &lt;/sp&gt; </pre> <p><b>Note</b> For transcribed speech, this will typically identify a participant or participant group; in other contexts, it will point to any identified <u>&lt;person&gt;</u> element.</p>
--	--

### 9.3.3. *att.ascribed.directed*

<b>att.ascribed.directed</b> provides attributes for elements representing speech or action that can be directed at a group or individual. [3.3.3. Quotation 8.3. Elements Unique to Spoken Texts]	
<b>Module</b>	tei
<b>Members</b>	q
<b>Attributes</b>	<p>Attributes <u>att.ascribed</u> (@who)</p> <p><b>toWhom</b> indicates the person, or group of people, to whom a speech act or action is directed.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p> <p>In the following example from Mary Pix's <i>The False Friend</i>, speeches (&lt;sp&gt;) in the body of the play are linked to &lt;castItem&gt; elements in the &lt;castList&gt; using the <i>toWhom</i> attribute, which is used to specify who the speech is directed to. Additionally, the &lt;stage&gt; includes <i>toWhom</i> to indicate the directionality of the action.</p> <pre> &lt;castItem type="role"&gt;   &lt;role xml:id="emil"&gt;Emilius.&lt;/role&gt; &lt;/castItem&gt; &lt;castItem type="role"&gt;   &lt;role xml:id="lov"&gt;Lovisa&lt;/role&gt; &lt;/castItem&gt; &lt;castItem type="role"&gt;   &lt;role xml:id="serv"&gt;A servant&lt;/role&gt; &lt;/castItem&gt; &lt;!-- ... --&gt; &lt;sp who="#emil"   toWhom="#lov"&gt;   &lt;speaker&gt;Emil.&lt;/speaker&gt;   &lt;l n="1"&gt;My love!&lt;/l&gt; &lt;/sp&gt; &lt;sp who="#lov"   toWhom="#emil"&gt;   &lt;speaker&gt;Lov.&lt;/speaker&gt;   &lt;l n="2"&gt;I have no Witness of my Noble Birth&lt;/l&gt;   &lt;stage who="emil"     toWhom="#serv"&gt;Pointing to her Woman.&lt;/stage&gt;   &lt;l&gt;But that poor helpless wretch—&lt;/l&gt; &lt;/sp&gt; </pre> <p><b>Note</b> To indicate the recipient of written correspondence, use the elements used in section 2.4.6. Correspondence Description, rather than a <i>toWhom</i> attribute.</p>

### 9.3.4. *att.breaking*

<b>att.breaking</b> provides attributes to indicate whether or not the element concerned is considered to mark the end of an orthographic token in the same way as whitespace. [3.11.3. Milestone Elements]	
<b>Module</b>	tei
<b>Members</b>	lb pb
<b>Attributes</b>	<p>Attributes</p> <p><b>break</b> indicates whether or not the element bearing this attribute should be considered to mark the end of an orthographic token in the same way as whitespace.</p>

	<p><b>Status</b> Recommended</p> <p><b>Datatype</b> <a href="#">teidata.enumerated</a></p> <p><b>Sample values include</b> <b>yes</b> the element bearing this attribute is considered to mark the end of any adjacent orthographic token irrespective of the presence of any adjacent whitespace</p> <p><b>no</b> the element bearing this attribute is considered not to mark the end of any adjacent orthographic token irrespective of the presence of any adjacent whitespace</p> <p><b>maybe</b> the encoding does not take any position on this issue.</p> <p>In the following lines from the ‘Dream of the Rood’, linebreaks occur in the middle of the words <i>l#ðost</i> and <i>reord-berendum</i>.</p> <pre>&lt;ab&gt; ...e#esa tome iu ic#æs #e#orden #ita heardo#t . leodum la&lt;lb break="no"/&gt; ðost ærþan ichim lifes #e# rihtne #erymde reord be&lt;lb break="no"/&gt; rendum h#æt me þa#e#eorðode #uldres ealdor ofer... &lt;/ab&gt;</pre>
--	--

### 9.3.5. att.cReferencing

<b>att.cReferencing</b> provides attributes that may be used to supply a <i>canonical reference</i> as a means of identifying the target of a pointer.	
<b>Module</b>	tei
<b>Members</b>	<a href="#">ptr</a> <a href="#">ref</a> <a href="#">term</a>
<b>Attributes</b>	<p>Attributes</p> <p><b>cRef</b> (canonical reference) specifies the destination of the pointer by supplying a canonical reference expressed using the scheme defined in a <code>&lt;refsDecl&gt;</code> element in the TEI header</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.text</a></p> <p><b>Note</b> The value of <i>cRef</i> should be constructed so that when the algorithm for the resolution of canonical references (described in section 16.2.5. Canonical References) is applied to it the result is a valid URI reference to the intended target. The <code>&lt;refsDecl&gt;</code> to use may be indicated with the <i>decls</i> attribute. Currently these Guidelines only provide for a single canonical reference to be encoded on any given <code>&lt;ptr&gt;</code> element.</p>

### 9.3.6. att.canonical

<b>att.canonical</b> provides attributes that can be used to associate a representation such as a name or title with canonical information about the object being named or referenced. [13.1.1. Linking Names and Their Referents]	
<b>Module</b>	tei
<b>Members</b>	<a href="#">att.naming</a> [ <a href="#">att.personal</a> [ <a href="#">name</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">roleName</a> ] <a href="#">country</a> <a href="#">editor</a> <a href="#">pubPlace</a> <a href="#">rs</a> <a href="#">settlement</a> ] <a href="#">correspDesc</a> <a href="#">date</a> <a href="#">objectType</a> <a href="#">publisher</a> <a href="#">term</a> <a href="#">title</a>
<b>Attributes</b>	<p>Attributes</p> <p><b>key</b> provides an externally-defined means of identifying the entity (or entities) being named, using a coded value of some kind.</p> <p><b>Status</b> Optional</p>

	<p><b>Datatype</b> <u>teidata.text</u></p> <pre>&lt;author&gt;   &lt;name key="name 427308"     type="organisation"&gt;[New Zealand Parliament, Legislative Council]&lt;/name&gt; &lt;/author&gt;  &lt;author&gt;   &lt;name key="Hugo, Victor (1802-1885)"     ref="http://www.idref.fr/026927608"&gt;Victor Hugo&lt;/name&gt; &lt;/author&gt;</pre> <p><b>Note</b> The value may be a unique identifier from a database, or any other externally-defined string identifying the referent.</p> <p>No particular syntax is proposed for the values of the <i>key</i> attribute, since its form will depend entirely on practice within a given project. For the same reason, this attribute is not recommended in data interchange, since there is no way of ensuring that the values used by one project are distinct from those used by another. In such a situation, a preferable approach for magic tokens which follows standard practice on the Web is to use a <i>ref</i> attribute whose value is a tag URI as defined in RFC 4151.</p> <p>ref (reference) provides an explicit means of locating a full definition or identity for the entity being named by means of one or more URIs.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p> <pre>&lt;name ref="http://viaf.org/viaf/109557338"   type="person"&gt;Seamus Heaney&lt;/name&gt;</pre> <p><b>Note</b> The value must point directly to one or more XML elements or other resources by means of one or more URIs, separated by whitespace. If more than one is supplied the implication is that the name identifies several distinct entities.</p>
--	--

### 9.3.7. att.coordinated

att.coordinated provides attributes that can be used to position their parent element within a two dimensional coordinate system.	
<b>Module</b>	transcr
<b>Members</b>	<u>surface</u>
<b>Attributes</b>	<p>Attributes</p> <p>start indicates the element within a transcription of the text containing at least the start of the writing represented by this zone or surface.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.pointer</u></p> <p>ulx gives the x coordinate value for the upper left corner of a rectangular space.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.numeric</u></p> <p>uly gives the y coordinate value for the upper left corner of a rectangular space.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.numeric</u></p> <p>lrx gives the x coordinate value for the lower right corner of a rectangular space.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.numeric</u></p>

	lry	gives the y coordinate value for the lower right corner of a rectangular space. <b>Status</b> Optional <b>Datatype</b> <a href="#">teidata.numeric</a>
	points	identifies a two dimensional area by means of a series of pairs of numbers, each of which gives the x,y coordinates of a point on a line enclosing the area. <b>Status</b> Optional <b>Datatype</b> 3-# occurrences of <a href="#">teidata.point</a> separated by whitespace

### 9.3.8. att.dateable

<b>att.dateable</b> provides attributes for normalization of elements that contain dates, times, or dateable events. [3.6.4. Dates and Times 13.4. Dates]	
<b>Module</b>	tei
<b>Members</b>	<a href="#">change</a> <a href="#">country</a> <a href="#">creation</a> <a href="#">date</a> <a href="#">editor</a> <a href="#">idno</a> <a href="#">licence</a> <a href="#">name</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">settlement</a> <a href="#">stamp</a> <a href="#">title</a>
<b>Attributes</b>	<p>Attributes <a href="#">att.dateable.w3c</a> (@when, @notBefore, @notAfter, @from, @to) <a href="#">att.dateable.iso</a> (@when-iso, @notBefore-iso, @notAfter-iso, @from-iso, @to-iso) <a href="#">att.dateable.custom</a> (@when-custom, @notBefore-custom, @notAfter-custom, @from-custom, @to-custom, @datingPoint, @datingMethod)</p> <p><b>calendar</b> indicates one or more systems or calendars to which the date represented by the content of this element belongs. <b>Status</b> Optional <b>Datatype</b> 1-# occurrences of <a href="#">teidata.pointer</a> separated by whitespace <b>Schematron</b> &lt;sch:rule context="tei:*[@calendar]"&gt; &lt;sch:assert test="string-length(.) gt 0"&gt; @calendar indicates one or more systems or calendars to which the date represented by the content of this element belongs, but this &lt;sch:name/&gt; element has no textual content.&lt;/sch:assert&gt; &lt;/sch:rule&gt;</p> <pre> He was born on &lt;date calendar="#gregorian"&gt;Feb. 22, 1732&lt;/date&gt; (&lt;date when="1732-02-22"&gt;Feb. 11, 1731/32, O.S.&lt;/date&gt;). </pre> <pre> He was born on &lt;date calendar="#gregorian #julian" when="1732-02-22"&gt;Feb. 22, 1732 (Feb. 11, 1731/32, O.S.)&lt;/date&gt;. </pre> <p><b>Note</b> Note that the <i>calendar</i> attribute (unlike <i>datingMethod</i> defined in <a href="#">att.dateable.custom</a>) defines the calendar system of the date in the original material defined by the parent element, <i>not</i> the calendar to which the date is normalized.</p> <p><b>period</b> supplies pointers to one or more definitions of named periods of time (typically &lt;category&gt;s or &lt;calendar&gt;s) within which the dateable item is understood to have occurred. <b>Status</b> Optional <b>Datatype</b> 1-# occurrences of <a href="#">teidata.pointer</a> separated by whitespace</p>
<b>Note</b>	This ‘superclass’ provides attributes that can be used to provide normalized values of temporal information. By default, the attributes from the <a href="#">att.dateable.w3c</a> class are provided. If the module for names & dates is loaded, this class also provides attributes from the <a href="#">att.dateable.iso</a> and <a href="#">att.dateable.custom</a> classes. In general, the possible values of attributes restricted to the W3C datatypes form a subset of those values available via the ISO 8601 standard. However, the greater expressiveness of the ISO datatypes may not be needed, and there exists much greater software support for the W3C datatypes.

### 9.3.9. att.datable.custom

<b>att.datable.custom</b> provides attributes for normalization of elements that contain datable events to a custom dating system (i.e. other than the Gregorian used by W3 and ISO). [13.4. Dates]	
<b>Module</b>	namesdates
<b>Members</b>	<a href="#">att.datable</a> [ <a href="#">change</a> <a href="#">country</a> <a href="#">creation</a> <a href="#">date</a> <a href="#">editor</a> <a href="#">idno</a> <a href="#">licence</a> <a href="#">name</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">settlement</a> <a href="#">stamp</a> <a href="#">title</a> ]
<b>Attributes</b>	<p>Attributes</p> <p><b>when-custom</b> supplies the value of a date or time in some custom standard form.  <b>Status</b> Optional  <b>Datatype</b> 1-# occurrences of <a href="#">teidata.word</a> separated by whitespace  The following are examples of custom date or time formats that are <i>not</i> valid ISO or W3C format normalizations, normalized to a different dating system</p> <pre>&lt;p&gt;Alhazen died in Cairo on the &lt;date when="1040-03-06"   when-custom="431-06-12"&gt; 12th day of Jumada t-Tania, 430 AH &lt;/date&gt;.&lt;/p&gt; &lt;p&gt;The current world will end at the &lt;date when="2012-12-21"   when-custom="13.0.0.0"&gt;end of B'ak'tun 13&lt;/date&gt;.&lt;/p&gt; &lt;p&gt;The Battle of Meggidu (&lt;date when-custom="Thutmose_III:23"&gt;23rd year of reign of Thutmose III&lt;/date&gt;).&lt;/p&gt; &lt;p&gt;Esidorus bixit in pace annos LXX plus minus sub &lt;date when-custom="Ind:4-10-11"&gt;die XI mensis Octobris indictione IIII&lt;/date&gt; &lt;/p&gt;</pre> <p>Not all custom date formulations will have Gregorian equivalents. The <i>when-custom</i> attribute and other custom dating are not constrained to a datatype by the TEI, but individual projects are recommended to regularize and document their dating formats.</p> <p><b>notBefore-custom</b> specifies the earliest possible date for the event in some custom standard form.  <b>Status</b> Optional  <b>Datatype</b> 1-# occurrences of <a href="#">teidata.word</a> separated by whitespace</p> <p><b>notAfter-custom</b> specifies the latest possible date for the event in some custom standard form.  <b>Status</b> Optional  <b>Datatype</b> 1-# occurrences of <a href="#">teidata.word</a> separated by whitespace</p> <p><b>from-custom</b> indicates the starting point of the period in some custom standard form.  <b>Status</b> Optional  <b>Datatype</b> 1-# occurrences of <a href="#">teidata.word</a> separated by whitespace</p> <pre>&lt;event xml:id="FIRE1"   datingMethod="#julian"   from-custom="1666-09-02"   to-custom="1666-09-05"&gt; &lt;head&gt;The Great Fire of London&lt;/head&gt; &lt;p&gt;The Great Fire of London burned through a large part   of the city of London.&lt;/p&gt; &lt;/event&gt;</pre> <p><b>to-custom</b> indicates the ending point of the period in some custom standard form.  <b>Status</b> Optional  <b>Datatype</b> 1-# occurrences of <a href="#">teidata.word</a> separated by whitespace</p> <p><b>datingPoint</b> supplies a pointer to some location defining a named point in time with reference to which the datable item is understood to have occurred  <b>Status</b> Optional  <b>Datatype</b> <a href="#">teidata.pointer</a></p>

	<p><b>datingMethod</b> supplies a pointer to a <code>&lt;calendar&gt;</code> element or other means of interpreting the values of the custom dating attributes.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <code>teidata.pointer</code></p> <pre> Contayning the Originall, Antiquity, Increa#e, Moderne e#tate, and de#cription of that Citie, written in the yeare &lt;date when-custom="1598" calendar="#julian" datingMethod="#julian"&gt;1598&lt;/date&gt;. by Iohn Stow Citizen of London. </pre> <p>In this example, the <i>calendar</i> attribute points to a <code>&lt;calendar&gt;</code> element for the Julian calendar, specifying that the text content of the <code>&lt;date&gt;</code> element is a Julian date, and the <i>datingMethod</i> attribute also points to the Julian calendar to indicate that the content of the <i>when-custom</i> attribute value is Julian too.</p> <pre> &lt;date when="1382-06-28" when-custom="6890-06-20" datingMethod="#creationOfWorld"&gt; u### ##### ### &lt;num&gt;#&lt;/num&gt; ##### &lt;/date&gt; </pre> <p>In this example, a date is given in a Mediaeval text measured "from the creation of the world", which is normalised (in <i>when</i>) to the Gregorian date, but is also normalized (in <i>when-custom</i>) to a machine-actionable, numeric version of the date from the Creation.</p> <p><b>Note</b> Note that the <i>datingMethod</i> attribute (unlike <i>calendar</i> defined in <code>att.dateable</code>) defines the calendar or dating system to which the date described by the parent element is normalized (i.e. in the <i>when-custom</i> or other <i>X-custom</i> attributes), <i>not</i> the calendar of the original date in the element.</p>
--	--

### 9.3.10. att.dateable.iso

**att.dateable.iso** provides attributes for normalization of elements that contain dateable events using the ISO 8601 standard. [3.6.4. Dates and Times 13.4. Dates]

<b>Module</b>	namesdates
<b>Members</b>	<code>att.dateable</code> [ <code>change</code> <code>country</code> <code>creation</code> <code>date</code> <code>editor</code> <code>idno</code> <code>licence</code> <code>name</code> <code>orgName</code> <code>persName</code> <code>settlement</code> <code>stamp</code> <code>title</code> ]
<b>Attributes</b>	<p><b>when-iso</b> supplies the value of a date or time in a standard form.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <code>teidata.temporal.iso</code></p> <p>The following are examples of ISO date, time, and date &amp; time formats that are <i>not</i> valid W3C format normalizations.</p> <pre> &lt;date when-iso="1996-09-24T07:25+00"&gt;Sept. 24th, 1996 at 3:25 in the morning&lt;/date&gt; &lt;date when-iso="1996-09-24T03:25-04"&gt;Sept. 24th, 1996 at 3:25 in the morning&lt;/date&gt; &lt;time when-iso="1999-01-04T20:42-05"&gt;4 Jan 1999 at 8:42 pm&lt;/time&gt; &lt;time when-iso="1999-W01-1T20,70-05"&gt;4 Jan 1999 at 8:42 pm&lt;/time&gt; &lt;date when-iso="2006-05-18T10:03"&gt;a few minutes after ten in the morning on Thu 18 May&lt;/date&gt; &lt;time when-iso="03:00"&gt;3 A.M.&lt;/time&gt; &lt;time when-iso="14"&gt;around two&lt;/time&gt; &lt;time when-iso="15,5"&gt;half past three&lt;/time&gt; </pre> <p>All of the examples of the <i>when</i> attribute in the <code>att.dateable.w3c</code> class are also valid with respect to this attribute.</p> <pre> He likes to be punctual. I said &lt;q&gt; &lt;time when-iso="12"&gt;around noon&lt;/time&gt; &lt;/q&gt;, and he showed up at &lt;time when-iso="12:00:00"&gt;12 O'clock&lt;/time&gt; on the dot. </pre> <p>The second occurrence of <code>&lt;time&gt;</code> could have been encoded with the <i>when</i> attribute, as 12:00:00 is a valid time with respect to the W3C XML Schema Part 2: Datatypes Second Edition specification. The first occurrence could not.</p>

	<p>notBefore-iso specifies the earliest possible date for the event in standard form, e.g. yyyy-mm-dd.  <b>Status</b> Optional  <b>Datatype</b> <a href="#">teidata.temporal.iso</a></p> <p>notAfter-iso specifies the latest possible date for the event in standard form, e.g. yyyy-mm-dd.  <b>Status</b> Optional  <b>Datatype</b> <a href="#">teidata.temporal.iso</a></p> <p>from-iso indicates the starting point of the period in standard form.  <b>Status</b> Optional  <b>Datatype</b> <a href="#">teidata.temporal.iso</a></p> <p>to-iso indicates the ending point of the period in standard form.  <b>Status</b> Optional  <b>Datatype</b> <a href="#">teidata.temporal.iso</a></p>
<b>Note</b>	<p>The value of these attributes should be a normalized representation of the date, time, or combined date &amp; time intended, in any of the standard formats specified by ISO 8601, using the Gregorian calendar.</p> <p>If both <i>when-iso</i> and <i>dur-iso</i> are specified, the values should be interpreted as indicating a span of time by its starting time (or date) and duration. That is,</p> <pre>&lt;date when-iso="2007-06-01" dur-iso="P8D"/&gt;</pre> <p>indicates the same time period as</p> <pre>&lt;date when-iso="2007-06-01/P8D"/&gt;</pre> <p>In providing a 'regularized' form, no claim is made that the form in the source text is incorrect; the regularized form is simply that chosen as the main form for purposes of unifying variant forms under a single heading.</p>

### 9.3.11. att.datable.w3c

<b>att.datable.w3c</b> provides attributes for normalization of elements that contain datable events conforming to the W3C XML Schema Part 2: Datatypes Second Edition. [3.6.4. Dates and Times 13.4. Dates]	
<b>Module</b>	tei
<b>Members</b>	<a href="#">att.datable</a> [ <a href="#">change</a> <a href="#">country</a> <a href="#">creation</a> <a href="#">date</a> <a href="#">editor</a> <a href="#">idno</a> <a href="#">licence</a> <a href="#">name</a> <a href="#">orgName</a> <a href="#">persName</a> <a href="#">settlement</a> <a href="#">stamp</a> <a href="#">title</a> ]
<b>Attributes</b>	<p>Attributes</p> <p>when supplies the value of the date or time in a standard form, e.g. yyyy-mm-dd.  <b>Status</b> Optional  <b>Datatype</b> <a href="#">teidata.temporal.w3c</a></p> <p>Examples of W3C date, time, and date &amp; time formats.</p> <pre>&lt;p&gt;   &lt;date when="1945-10-24"&gt;24 Oct 45&lt;/date&gt;   &lt;date when="1996-09-24T07:25:00Z"&gt;September 24th, 1996 at 3:25 in the morning&lt;/date&gt;   &lt;time when="1999-01-04T20:42:00-05:00"&gt;Jan 4 1999 at 8 pm&lt;/time&gt;   &lt;time when="14:12:38"&gt;fourteen twelve and 38 seconds&lt;/time&gt;   &lt;date when="1962-10"&gt;October of 1962&lt;/date&gt;   &lt;date when="--06-12"&gt;June 12th&lt;/date&gt;   &lt;date when="---01"&gt;the first of the month&lt;/date&gt;   &lt;date when="--08"&gt;August&lt;/date&gt;   &lt;date when="2006"&gt;MMVI&lt;/date&gt;   &lt;date when="0056"&gt;AD 56&lt;/date&gt;   &lt;date when="-0056"&gt;56 BC&lt;/date&gt; &lt;/p&gt;</pre> <p>This list begins in the year 1632, more precisely on Trinity Sunday, i.e. the Sunday after Pentecost, in that year the</p> <pre>&lt;date calendar="#julian"   when="1632-06-06"&gt;27th of May (old style)&lt;/date&gt;.</pre> <pre>&lt;opener&gt;   &lt;dateline&gt;     &lt;placeName&gt;Dorchester, Village,&lt;/placeName&gt;</pre>

	<pre>&lt;date when="1828-03-02"&gt;March 2d. 1828.&lt;/date&gt; &lt;/dateline&gt; &lt;salute&gt;To   Mrs. Cornell,&lt;/salute&gt; Sunday &lt;time when="12:00:00"&gt;noon.&lt;/time&gt; &lt;/opener&gt;</pre>
notBefore	<p>specifies the earliest possible date for the event in standard form, e.g. yyyy-mm-dd.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.temporal.w3c</a></p>
notAfter	<p>specifies the latest possible date for the event in standard form, e.g. yyyy-mm-dd.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.temporal.w3c</a></p>
from	<p>indicates the starting point of the period in standard form, e.g. yyyy-mm-dd.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.temporal.w3c</a></p>
to	<p>indicates the ending point of the period in standard form, e.g. yyyy-mm-dd.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.temporal.w3c</a></p>
<b>Schematron</b>	<pre>&lt;sch:rule context="tei:*[@when]"&gt; &lt;sch:report test="@notBefore @notAfter @from @to"   role="nonfatal"&gt;The @when attribute cannot be used with any other att.dateable.w3c attrib-   utes.&lt;/sch:report&gt; &lt;/sch:rule&gt;</pre>
<b>Schematron</b>	<pre>&lt;sch:rule context="tei:*[@from]"&gt; &lt;sch:report test="@notBefore" role="nonfatal"&gt;The   @from and @notBefore attributes cannot be used together.&lt;/sch:report&gt; &lt;/sch:rule&gt;</pre>
<b>Schematron</b>	<pre>&lt;sch:rule context="tei:*[@to]"&gt; &lt;sch:report test="@notAfter" role="nonfatal"&gt;The @to   and @notAfter attributes cannot be used together.&lt;/sch:report&gt; &lt;/sch:rule&gt;</pre>
<b>Example</b>	<pre>&lt;date from="1863-05-28" to="1863-06-01"&gt;28 May through 1 June 1863&lt;/date&gt;</pre>
<b>Note</b>	<p>The value of these attributes should be a normalized representation of the date, time, or combined date &amp; time intended, in any of the standard formats specified by <i>XML Schema Part 2: Datatypes Second Edition</i>, using the Gregorian calendar.</p> <p>The most commonly-encountered format for the date portion of a temporal attribute is yyyy-mm-dd, but yyyy, --mm, ---dd, yyyy-mm, or --mm-dd may also be used. For the time part, the form hh:mm:ss is used.</p> <p>Note that this format does not currently permit use of the value 0000 to represent the year 1 BCE; instead the value -0001 should be used.</p>

### 9.3.12. att.datecat

<p><b>att.datecat</b> provides attributes that are used to align XML elements or attributes with the appropriate Data Categories (DCs) defined by the ISO 12620:2009 standard and stored in the Web repository called ISOcat at <a href="http://www.isocat.org/">http://www.isocat.org/</a>. [9.5.2. Lexical View 18.3. Other Atomic Feature Values]</p>	
<b>Module</b>	tei
<b>Members</b>	<a href="#">att.segLike</a> [ <a href="#">c</a> <a href="#">cl</a> <a href="#">m</a> <a href="#">pc</a> <a href="#">phr</a> <a href="#">s</a> <a href="#">seg</a> <a href="#">w</a> ]
<b>Attributes</b>	<p>Attributes</p> <p><b>datecat</b> contains a PID (persistent identifier) that aligns the given element with the appropriate Data Category (or categories) in ISOcat.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <a href="#">teidata.pointer</a> separated by white-space</p> <p><b>valueDatecat</b> contains a PID (persistent identifier) that aligns the content of the given element or the value of the given attribute with the appropriate simple Data Category (or categories) in ISOcat.</p>

	<p><b>Status</b> Optional</p> <p><b>Datatype</b> 1–# occurrences of <u>teidata.pointer</u> separated by white-space</p>
<b>Example</b>	<p>In this example <i>dcr:datcat</i> relates the feature name to the data category "partOfSpeech" and <i>dcr:valueDatcat</i> the feature value to the data category "commonNoun". Both these data categories reside in the ISocat DCR at <a href="http://www.isocat.org">www.isocat.org</a>, which is the DCR used by ISO TC37 and hosted by its registration authority, the MPI for Psycholinguistics in Nijmegen.</p> <pre>&lt;fs   xmlns:dcr="http://www.isocat.org/ns/dcr"&gt;   &lt;f name="POS"     dcr:datcat="http://www.isocat.org/datcat/DC-1345" fVal="#commonNoun"     dcr:valueDatcat="http://www.isocat.org/datcat/DC-1256"/&gt; &lt;/fs&gt;</pre>
<b>Note</b>	<p>ISO 12620:2009 is a standard describing the data model and procedures for a Data Category Registry (DCR). Data categories are defined as elementary descriptors in a linguistic structure. In the DCR data model each data category gets assigned a unique Persistent Identifier (PID), i.e., an URI. Linguistic resources or preferably their schemas that make use of data categories from a DCR should refer to them using this PID. For XML-based resources, like TEI documents, ISO 12620:2009 normative Annex A gives a small Data Category Reference XML vocabulary (also available online at <a href="http://www.isocat.org/12620/">http://www.isocat.org/12620/</a>), which provides two attributes, <i>dcr:datcat</i> and <i>dcr:valueDatcat</i>.</p>

### 9.3.13. att.declarable

<p><b>att.declarable</b> provides attributes for those elements in the TEI header which may be independently selected by means of the special purpose <i>decls</i> attribute. [15.3. Associating Contextual Information with a Text]</p>	
<b>Module</b>	tei
<b>Members</b>	<a href="#">availability</a> <a href="#">correspDesc</a> <a href="#">langUsage</a> <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">particDesc</a> <a href="#">seriesStmt</a> <a href="#">sourceDesc</a> <a href="#">textClass</a>
<b>Attributes</b>	<p>Attributes</p> <p><b>default</b> indicates whether or not this element is selected by default when its parent is selected.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.truthValue</u></p> <p><b>Legal values</b> <b>true</b></p> <p><b>are:</b> This element is selected if its parent is selected</p> <p><b>false</b> This element can only be selected explicitly, unless it is the only one of its kind, in which case it is selected if its parent is selected.[Default]</p>
<b>Note</b>	<p>The rules governing the association of declarable elements with individual parts of a TEI text are fully defined in chapter 15.3. Associating Contextual Information with a Text. Only one element of a particular type may have a <i>default</i> attribute with a value of true.</p>

### 9.3.14. att.declaring

<p><b>att.declaring</b> provides attributes for elements which may be independently associated with a particular declarable element within the header, thus overriding the inherited default for that element. [15.3. Associating Contextual Information with a Text]</p>	
<b>Module</b>	tei
<b>Members</b>	<a href="#">ab</a> <a href="#">body</a> <a href="#">div</a> <a href="#">facsimile</a> <a href="#">graphic</a> <a href="#">p</a> <a href="#">ptr</a> <a href="#">ref</a> <a href="#">surface</a> <a href="#">surfaceGrp</a> <a href="#">term</a> <a href="#">text</a>
<b>Attributes</b>	<p>Attributes</p> <p><b>decls</b> identifies one or more <i>declarable elements</i> within the header, which are understood to apply to the element bearing this attribute and its content.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1–# occurrences of <u>teidata.pointer</u> separated by white-space</p>

<b>Note</b>	The rules governing the association of declarable elements with individual parts of a TEI text are fully defined in chapter 15.3. Associating Contextual Information with a Text.
-------------	---

### 9.3.15. *att.dimensions*

<b>att.dimensions</b> provides attributes for describing the size of physical objects.	
<b>Module</b>	tei
<b>Members</b>	add date del gap restore subst
<b>Attributes</b>	<p>Attributes <u>att.ranging</u> (@atLeast, @atMost, @min, @max, @confidence)</p> <p><b>unit</b> names the unit used for the measurement</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Suggested values include:</b></p> <p><b>cm</b> (centimetres)</p> <p><b>mm</b> (millimetres)</p> <p><b>in</b> (inches)</p> <p><b>line</b> lines of text</p> <p><b>char</b> (characters) characters of text</p> <p><b>quantity</b> specifies the length in the units specified</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.numeric</u></p> <p><b>extent</b> indicates the size of the object concerned using a project-specific vocabulary combining quantity and units in a single string of words.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.text</u></p> <pre>&lt;gap extent="5 words"/&gt;</pre> <pre>&lt;height extent="half the page"/&gt;</pre> <p><b>precision</b> characterizes the precision of the values specified by the other attributes.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.certainty</u></p> <p><b>scope</b> where the measurement summarizes more than one observation, specifies the applicability of this measurement.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Sample values include:</b></p> <p><b>all</b> measurement applies to all instances.</p> <p><b>most</b> measurement applies to most of the instances inspected.</p> <p><b>range</b> measurement applies to only the specified range of instances.</p>

### 9.3.16. *att.divLike*

<b>att.divLike</b> provides attributes common to all elements which behave in the same way as divisions. [4. Default Text Structure]
--

<b>Module</b>	tei
<b>Members</b>	<u>div</u>
<b>Attributes</b>	<p>Attributes <u>att.fragmentable</u> (@part)</p> <p><b>org</b> (organization) specifies how the content of the division is organized.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Legal values are:</b> <b>com-</b>  <b>pos-</b> no claim is made about the sequence in which  <b>ite</b> the immediate contents of this division are to be  processed, or their inter-relationships.</p> <p><b>uni-</b>  <b>form</b> the immediate contents of this element are re-  garded as forming a logical unit, to be processed  in sequence.[Default]</p> <p><b>sample</b> indicates whether this division is a sample of the original source and if  so, from which part.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Legal values are:</b> <b>ini-</b>  <b>tial</b> division lacks material present at end in source.</p> <p><b>me-</b>  <b>di-</b> division lacks material at start and end.  <b>al</b></p> <p><b>fi-</b>  <b>nal</b> division lacks material at start.</p> <p><b>un-</b>  <b>known</b> position of sampled material within original un-  known.</p> <p><b>com-</b>  <b>pleted</b> division is not a sample.[Default]</p>

### 9.3.17. att.docStatus

att.docStatus provides attributes for use on metadata elements describing the status of a document.	
<b>Module</b>	tei
<b>Members</b>	<u>change</u> <u>revisionDesc</u>
<b>Attributes</b>	<p>Attributes</p> <p><b>status</b> describes the status of a document either currently or, when associated  with a dated element, at the time indicated.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Sample values include:</b> <b>ap-</b>  <b>proved</b></p> <p><b>can-</b>  <b>di-</b>  <b>date</b></p> <p><b>cleared</b></p> <p><b>dep-</b>  <b>re-</b>  <b>cat-</b>  <b>ed</b></p>

	<p><b>draft</b> [Default]</p> <p><b>em- bar- goed</b></p> <p><b>ex- pired</b></p> <p><b>frozen</b></p> <p><b>gal- ley</b></p> <p><b>pro- posed</b></p> <p><b>pub- lished</b></p> <p><b>rec- om- men- da- tion</b></p> <p><b>sub- mit- ted</b></p> <p><b>un- fin- ished</b></p> <p><b>with- drawn</b></p>
<b>Example</b>	<pre>&lt;revisionDesc status="published"&gt;   &lt;change when="2010-10-21"     status="published"/&gt;   &lt;change when="2010-10-02" status="cleared"/&gt;   &lt;change when="2010-08-02"     status="embargoed"/&gt;   &lt;change when="2010-05-01" status="frozen"     who="#MSM"/&gt;   &lt;change when="2010-03-01" status="draft"     who="#LB"/&gt; &lt;/revisionDesc&gt;</pre>

### 9.3.18. *att.editLike*

<p><b>att.editLike</b> provides attributes describing the nature of an encoded scholarly intervention or interpretation of any kind. [3.5. Simple Editorial Changes 10.3.1. Origination 13.3.2. The Person Element 11.3.1.1. Core Elements for Transcriptional Work]</p>	
<b>Module</b>	tei
<b>Members</b>	<u>att.transcriptional</u> [ <u>add</u> <u>del</u> <u>restore</u> <u>subst</u> ] <u>date</u> <u>gap</u> <u>name</u> <u>org</u> <u>orgName</u> <u>persName</u> <u>person</u>
<b>Attributes</b>	<p>Attributes</p> <p><b>evidence</b> indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.enumerated</u> separated by whitespace</p> <p><b>Suggested values include:</b> <b>in- ter- nal</b> there is internal evidence to support the interven- tion.</p>

	<p><b>ex-</b> <b>ter-</b> there is external evidence to support the interven- <b>nal</b> tion.</p> <p><b>con-</b> <b>jec-</b> the intervention or interpretation has been made <b>ture</b> by the editor, cataloguer, or scholar on the basis of their expertise.</p> <p>instant indicates whether this is an instant revision or not.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.xTruthValue</u></p> <p><b>Default</b> false</p>
<b>Note</b>	<p>The members of this attribute class are typically used to represent any kind of editorial intervention in a text, for example a correction or interpretation, or to date or localize manuscripts etc.</p> <p>Each pointer on the <i>source</i> (if present) corresponding to a witness or witness group should reference a bibliographic citation such as a <u>&lt;witness&gt;</u>, <u>&lt;msDesc&gt;</u>, or <u>&lt;bibl&gt;</u> element, or another external bibliographic citation, documenting the source concerned.</p>

### 9.3.19. att.edition

<b>att.edition</b> provides attributes identifying the source edition from which some encoded feature derives.	
<b>Module</b>	tei
<b>Members</b>	<u>lb</u> <u>pb</u>
<b>Attributes</b>	<p>Attributes</p> <p><b>ed</b> (edition) supplies a sigil or other arbitrary identifier for the source edition in which the associated feature (for example, a page, column, or line break) occurs at this point in the text.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.word</u> separated by whitespace</p> <p><b>edRef</b> (edition reference) provides a pointer to the source edition in which the associated feature (for example, a page, column, or line break) occurs at this point in the text.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p>
<b>Example</b>	<pre>&lt;l&gt;Of Mans First Disobedience,&lt;lb ed="1674"/&gt; and&lt;lb ed="1667"/&gt; the Fruit&lt;/l&gt; &lt;l&gt;Of that Forbidden Tree, whose&lt;lb ed="1667 1674"/&gt; mortal tast&lt;/l&gt; &lt;l&gt;Brought Death into the World,&lt;lb ed="1667"/&gt; and all&lt;lb ed="1674"/&gt; our woe,&lt;/l&gt;</pre>
<b>Example</b>	<pre>&lt;listBibl&gt;   &lt;bibl xml:id="stapledon1937"&gt;     &lt;author&gt;Olaf Stapledon&lt;/author&gt;,     &lt;title&gt;Starmaker&lt;/title&gt;, &lt;publisher&gt;Methuen&lt;/publisher&gt;, &lt;date&gt;1937&lt;/date&gt;   &lt;/bibl&gt;   &lt;bibl xml:id="stapledon1968"&gt;     &lt;author&gt;Olaf Stapledon&lt;/author&gt;,     &lt;title&gt;Starmaker&lt;/title&gt;, &lt;publisher&gt;Dover&lt;/publisher&gt;, &lt;date&gt;1968&lt;/date&gt;   &lt;/bibl&gt; &lt;/listBibl&gt; &lt;!-- ... --&gt; &lt;p&gt;Looking into the future aeons from the supreme moment of the cosmos, I saw the populations still with all their strength maintaining the&lt;pb n="411" edRef="#stapledon1968"/&gt;essentials of their ancient culture, still living their personal lives in zest and endless novelty of action, ... I saw myself still preserving, though with increasing difficulty, my lucid con-&lt;pb n="291" edRef="#stapledon1937"/&gt;sciousness;&lt;/p&gt;</pre>

### 9.3.20. att.fragmentable

<b>att.fragmentable</b> provides attributes for representing fragmentation of a structural element, typically as a consequence of some overlapping hierarchy.	
<b>Module</b>	tei

<b>Members</b>	<a href="#">att.divLike[div]</a> <a href="#">att.segLike[c cl m pc phr s seg w]</a> <a href="#">ab p</a>
<b>Attributes</b>	<p>Attributes</p> <p><b>part</b> specifies whether or not its parent element is fragmented in some way, typically by some other overlapping structure: for example a speech which is divided between two or more verse stanzas, a paragraph which is split across a page division, a verse line which is divided between two speakers.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.enumerated</a></p> <p><b>Legal values</b> <b>Y</b></p> <p><b>are:</b> (yes) the element is fragmented in some (unspecified) respect</p> <p><b>N</b> (no) the element is not fragmented, or no claim is made as to its completeness[Default]</p> <p><b>I</b> (initial) this is the initial part of a fragmented element</p> <p><b>M</b> (medial) this is a medial part of a fragmented element</p> <p><b>F</b> (final) this is the final part of a fragmented element</p> <p><b>Note</b> The values I, M, or F should be used only where it is clear how the element may be reconstituted.</p>

### 9.3.21. *att.global*

<b>att.global</b> provides attributes common to all elements in the TEI encoding scheme. [1.3.1.1. Global Attributes]	
<b>Module</b>	tei
<b>Members</b>	<a href="#">TEI</a> <a href="#">ab</a> <a href="#">accMat</a> <a href="#">add</a> <a href="#">address</a> <a href="#">app</a> <a href="#">availability</a> <a href="#">body</a> <a href="#">c</a> <a href="#">change</a> <a href="#">cl</a> <a href="#">classCode</a> <a href="#">correspAction</a> <a href="#">correspDesc</a> <a href="#">country</a> <a href="#">creation</a> <a href="#">date</a> <a href="#">del</a> <a href="#">div</a> <a href="#">editor</a> <a href="#">encodingDesc</a> <a href="#">facsimile</a> <a href="#">fileDesc</a> <a href="#">gap</a> <a href="#">graphic</a> <a href="#">handNote</a> <a href="#">handNotes</a> <a href="#">hi</a> <a href="#">idno</a> <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">keywords</a> <a href="#">langUsage</a> <a href="#">language</a> <a href="#">lb</a> <a href="#">lem</a> <a href="#">licence</a> <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">listTranspose</a> <a href="#">listWit</a> <a href="#">m</a> <a href="#">metamark</a> <a href="#">name</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">objectType</a> <a href="#">org</a> <a href="#">orgName</a> <a href="#">p</a> <a href="#">particDesc</a> <a href="#">pb</a> <a href="#">pc</a> <a href="#">persName</a> <a href="#">person</a> <a href="#">phr</a> <a href="#">physDesc</a> <a href="#">postCode</a> <a href="#">profileDesc</a> <a href="#">ptr</a> <a href="#">pubPlace</a> <a href="#">publicationStmnt</a> <a href="#">publisher</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">rdg</a> <a href="#">ref</a> <a href="#">restore</a> <a href="#">revisionDesc</a> <a href="#">roleName</a> <a href="#">rs</a> <a href="#">s</a> <a href="#">seg</a> <a href="#">seriesStmnt</a> <a href="#">settlement</a> <a href="#">sourceDesc</a> <a href="#">span</a> <a href="#">spanGrp</a> <a href="#">stamp</a> <a href="#">street</a> <a href="#">subst</a> <a href="#">surface</a> <a href="#">surfaceGrp</a> <a href="#">tei-Header</a> <a href="#">term</a> <a href="#">text</a> <a href="#">textClass</a> <a href="#">title</a> <a href="#">titleStmnt</a> <a href="#">transpose</a> <a href="#">variantEncoding</a> <a href="#">w</a> <a href="#">witness</a>
<b>Attributes</b>	<p>Attributes <a href="#">att.global.rendition</a> (@rend, @style, @rendition) <a href="#">att.global.link</a> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select) <a href="#">att.global.analytic</a> (@ana) <a href="#">att.global.facs</a> (@facs) <a href="#">att.global.change</a> (@change) <a href="#">att.global.responsibility</a> (@cert, @resp) <a href="#">att.global.source</a> (@source)</p> <p><b>xml:id</b> (identifier) provides a unique identifier for the element bearing the attribute.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> ID</p> <p><b>Note</b> The <i>xml:id</i> attribute may be used to specify a canonical reference for an element; see section 3.11. Reference Systems.</p> <p><b>n</b> (number) gives a number (or other label) for an element, which is not necessarily unique within the document.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.text</a></p>

	<p><b>Note</b> The value of this attribute is always understood to be a single token, even if it contains space or other punctuation characters, and need not be composed of numbers only. It is typically used to specify the numbering of chapters, sections, list items, etc.; it may also be used in the specification of a standard reference system for the text.</p>
xml:lang	<p>(language) indicates the language of the element content using a 'tag' generated according to BCP 47.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.language</a></p> <pre>&lt;p&gt; ... The consequences of this rapid depopulation were the loss of the last &lt;foreign xml:lang="rap"&gt;ariki&lt;/foreign&gt; or chief (Routledge 1920:205,210) and their connections to ancestral territorial organization.&lt;/p&gt;</pre> <p><b>Note</b> The <i>xml:lang</i> value will be inherited from the immediately enclosing element, or from its parent, and so on up the document hierarchy. It is generally good practice to specify <i>xml:lang</i> at the highest appropriate level, noticing that a different default may be needed for the <a href="#">&lt;teiHeader&gt;</a> from that needed for the associated resource element or elements, and that a single TEI document may contain texts in many languages.</p> <p>Only attributes with free text values (rare in these guidelines) will be in the scope of <i>xml:lang</i>.</p> <p>The authoritative list of registered language subtags is maintained by IANA and is available at <a href="http://www.iana.org/assignments/language-subtag-registry">http://www.iana.org/assignments/language-subtag-registry</a>. For a good general overview of the construction of language tags, see <a href="http://www.w3.org/International/articles/language-tags/">http://www.w3.org/International/articles/language-tags/</a>, and for a practical step-by-step guide, see <a href="https://www.w3.org/International/questions/qa-choosing-language-tags.en.php">https://www.w3.org/International/questions/qa-choosing-language-tags.en.php</a>.</p> <p>The value used must conform with BCP 47. If the value is a private use code (i.e., starts with x- or contains -x-), a <a href="#">&lt;language&gt;</a> element with a matching value for its <i>ident</i> attribute should be supplied in the TEI header to document this value. Such documentation may also optionally be supplied for non-private-use codes, though these must remain consistent with their IETF/Internet Engineering Task Force definitions.</p>
xml:base	<p>provides a base URI reference with which applications can resolve relative URI references into absolute URI references.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.pointer</a></p> <pre>&lt;div type="bibl"&gt; &lt;head&gt;Bibliography&lt;/head&gt; &lt;listBibl xml:base="http://www.lib.ucdavis.edu/BWRP/Works/"&gt; &lt;bibl&gt; &lt;author&gt; &lt;name&gt;Landon, Letitia Elizabeth&lt;/name&gt; &lt;/author&gt; &lt;ref target="LandLVowOf.sgm"&gt; &lt;title&gt;The Vow of the Peacock&lt;/title&gt; &lt;/ref&gt; &lt;/bibl&gt; &lt;bibl&gt; &lt;author&gt; &lt;name&gt;Compton, Margaret Clephane&lt;/name&gt; &lt;/author&gt; &lt;ref target="NortMIrene.sgm"&gt; &lt;title&gt;Irene, a Poem in Six Cantos&lt;/title&gt; &lt;/ref&gt; &lt;/bibl&gt; &lt;bibl&gt; &lt;author&gt; &lt;name&gt;Taylor, Jane&lt;/name&gt; &lt;/author&gt; &lt;ref target="TaylJEssay.sgm"&gt; &lt;title&gt;Essays in Rhyme on Morals and Manners&lt;/title&gt; &lt;/ref&gt; &lt;/bibl&gt;</pre>

	<div style="background-color: #f0f0f0; padding: 5px; margin-bottom: 10px;"> <pre>&lt;/bibl&gt; &lt;/listBibl&gt; &lt;/div&gt;</pre> </div> <p>xml:space signals an intention about how white space should be managed by applications.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.enumerated</a></p> <p><b>Legal values are:</b> <b>default</b> signals that the application's default white-space processing modes are acceptable</p> <p><b>preserve</b> indicates the intent that applications preserve all white space</p> <p><b>Note</b> The XML specification provides further guidance on the use of this attribute. Note that many parsers may not handle xml:space correctly.</p>
--	--

### 9.3.22. att.global.analytic

<b>att.global.analytic</b> provides additional global attributes for associating specific analyses or interpretations with appropriate portions of a text. [17.2. Global Attributes for Simple Analyses 17.3. Spans and Interpretations]	
<b>Module</b>	analysis
<b>Members</b>	<a href="#">att.global</a> [ <a href="#">TEI</a> <a href="#">ab</a> <a href="#">accMat</a> <a href="#">add</a> <a href="#">address</a> <a href="#">app</a> <a href="#">availability</a> <a href="#">body</a> <a href="#">c</a> <a href="#">change</a> <a href="#">cl</a> <a href="#">classCode</a> <a href="#">correspAction</a> <a href="#">correspDesc</a> <a href="#">country</a> <a href="#">creation</a> <a href="#">date</a> <a href="#">del</a> <a href="#">div</a> <a href="#">editor</a> <a href="#">encodingDesc</a> <a href="#">facsimile</a> <a href="#">fileDesc</a> <a href="#">gap</a> <a href="#">graphic</a> <a href="#">handNote</a> <a href="#">handNotes</a> <a href="#">hi</a> <a href="#">idno</a> <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">keywords</a> <a href="#">langUsage</a> <a href="#">language</a> <a href="#">lb</a> <a href="#">lem</a> <a href="#">licence</a> <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">listTranspose</a> <a href="#">listWit</a> <a href="#">m</a> <a href="#">metamark</a> <a href="#">name</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">object-Type</a> <a href="#">org</a> <a href="#">orgName</a> <a href="#">p</a> <a href="#">particDesc</a> <a href="#">pb</a> <a href="#">pc</a> <a href="#">persName</a> <a href="#">person</a> <a href="#">phr</a> <a href="#">physDesc</a> <a href="#">postCode</a> <a href="#">profileDesc</a> <a href="#">ptr</a> <a href="#">pubPlace</a> <a href="#">publicationStmt</a> <a href="#">publisher</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">rdg</a> <a href="#">ref</a> <a href="#">restore</a> <a href="#">revisionDesc</a> <a href="#">roleName</a> <a href="#">rs</a> <a href="#">s</a> <a href="#">seg</a> <a href="#">seriesStm</a> <a href="#">settlement</a> <a href="#">sourceDesc</a> <a href="#">span</a> <a href="#">spanGrp</a> <a href="#">stamp</a> <a href="#">street</a> <a href="#">subst</a> <a href="#">surface</a> <a href="#">surfaceGrp</a> <a href="#">teiHeader</a> <a href="#">term</a> <a href="#">text</a> <a href="#">textClass</a> <a href="#">title</a> <a href="#">titleStm</a> <a href="#">transpose</a> <a href="#">variantEncoding</a> <a href="#">w</a> <a href="#">witness</a> ]
<b>Attributes</b>	<p>Attributes</p> <p><b>ana</b> (analysis) indicates one or more elements containing interpretations of the element on which the <i>ana</i> attribute appears.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1–# occurrences of <a href="#">teidata.pointer</a> separated by white-space</p> <p><b>Note</b> When multiple values are given, they may reflect either multiple divergent interpretations of an ambiguous text, or multiple mutually consistent interpretations of the same passage in different contexts.</p>

### 9.3.23. att.global.change

<b>att.global.change</b> provides attributes allowing its member elements to specify one or more states or revision campaigns with which they are associated.	
<b>Module</b>	transcr
<b>Members</b>	<a href="#">att.global</a> [ <a href="#">TEI</a> <a href="#">ab</a> <a href="#">accMat</a> <a href="#">add</a> <a href="#">address</a> <a href="#">app</a> <a href="#">availability</a> <a href="#">body</a> <a href="#">c</a> <a href="#">change</a> <a href="#">cl</a> <a href="#">classCode</a> <a href="#">correspAction</a> <a href="#">correspDesc</a> <a href="#">country</a> <a href="#">creation</a> <a href="#">date</a> <a href="#">del</a> <a href="#">div</a> <a href="#">editor</a> <a href="#">encodingDesc</a> <a href="#">facsimile</a> <a href="#">fileDesc</a> <a href="#">gap</a> <a href="#">graphic</a> <a href="#">handNote</a> <a href="#">handNotes</a> <a href="#">hi</a> <a href="#">idno</a> <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">keywords</a> <a href="#">langUsage</a> <a href="#">language</a> <a href="#">lb</a> <a href="#">lem</a> <a href="#">licence</a> <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">listTranspose</a> <a href="#">listWit</a> <a href="#">m</a> <a href="#">metamark</a> <a href="#">name</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">object-Type</a> <a href="#">org</a> <a href="#">orgName</a> <a href="#">p</a> <a href="#">particDesc</a> <a href="#">pb</a> <a href="#">pc</a> <a href="#">persName</a> <a href="#">person</a> <a href="#">phr</a> <a href="#">physDesc</a> <a href="#">postCode</a> <a href="#">profileDesc</a> <a href="#">ptr</a> <a href="#">pubPlace</a> <a href="#">publicationStmt</a> <a href="#">publisher</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">rdg</a> <a href="#">ref</a> <a href="#">restore</a> <a href="#">revisionDesc</a> <a href="#">roleName</a> <a href="#">rs</a> <a href="#">s</a> <a href="#">seg</a> <a href="#">seriesStm</a> <a href="#">settlement</a> <a href="#">sourceDesc</a> <a href="#">span</a> <a href="#">spanGrp</a> <a href="#">stamp</a> <a href="#">street</a> <a href="#">subst</a> <a href="#">surface</a> <a href="#">surfaceGrp</a> <a href="#">teiHeader</a> <a href="#">term</a> <a href="#">text</a> <a href="#">textClass</a> <a href="#">title</a> <a href="#">titleStm</a> <a href="#">transpose</a> <a href="#">variantEncoding</a> <a href="#">w</a> <a href="#">witness</a> ]
<b>Attributes</b>	Attributes

	<p>change points to one or more <code>&lt;change&gt;</code> elements documenting a state or revision campaign to which the element bearing this attribute and its children have been assigned by the encoder.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <code>teidata.pointer</code> separated by white-space</p>
--	---

### 9.3.24. att.global.facs

att.global.facs provides attributes used to express correspondence between an element and all or part of a facsimile image or surface. [11.1. Digital Facsimiles]	
<b>Module</b>	transcr
<b>Members</b>	att.global[TEI ab accMat add address app availability body c change cl classCode correspAction correspDesc country creation date del div editor encodingDesc facsimile fileDesc gap graphic handNote handNotes hi idno interp interpGrp keywords langUsage language lb lem licence listOrg listPerson listTranspose listWit m metamark name note noteGrp objectType org orgName p particDesc pb pc persName person phr physDesc postCode profileDesc ptr pubPlace publicationStmnt publisher q quote rdg ref restore revisionDesc roleName rs s seg seriesStmnt settlement sourceDesc span spanGrp stamp street subst surface surfaceGrp teiHeader term text textClass title titleStmnt transpose variantEncoding w witness]
<b>Attributes</b>	<p>Attributes</p> <p>facs (facsimile) points to one or more images, portions of an image, or surfaces which correspond to the current element.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <code>teidata.pointer</code> separated by white-space</p>

### 9.3.25. att.global.linking

att.global.linking provides a set of attributes for hypertextual linking. [16. Linking, Segmentation, and Alignment]	
<b>Module</b>	linking
<b>Members</b>	att.global[TEI ab accMat add address app availability body c change cl classCode correspAction correspDesc country creation date del div editor encodingDesc facsimile fileDesc gap graphic handNote handNotes hi idno interp interpGrp keywords langUsage language lb lem licence listOrg listPerson listTranspose listWit m metamark name note noteGrp objectType org orgName p particDesc pb pc persName person phr physDesc postCode profileDesc ptr pubPlace publicationStmnt publisher q quote rdg ref restore revisionDesc roleName rs s seg seriesStmnt settlement sourceDesc span spanGrp stamp street subst surface surfaceGrp teiHeader term text textClass title titleStmnt transpose variantEncoding w witness]
<b>Attributes</b>	<p>Attributes</p> <p>corresp (corresponds) points to elements that correspond to the current element in some way.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <code>teidata.pointer</code> separated by white-space</p> <pre>&lt;group&gt; &lt;text xml:id="t1-g1-t1" xml:lang="mi"&gt; &lt;body xml:id="t1-g1-t1-body1"&gt; &lt;div type="chapter"&gt; &lt;head&gt;He Whakamaramatanga mo te Ture Hoko, Riihi hoki, i nga Whenua Maori, 1876.&lt;/head&gt; &lt;p&gt;...&lt;/p&gt; &lt;/div&gt; &lt;/body&gt; &lt;/text&gt; &lt;text xml:id="t1-g1-t2" xml:lang="en"&gt; &lt;body xml:id="t1-g1-t2-body1" corresp="#t1-g1-t1-body1"&gt; &lt;div type="chapter"&gt; &lt;head&gt;An Act to regulate the Sale, Letting, and Disposal of Native Lands, 1876.&lt;/head&gt;</pre>

```
<p>...</p>
</div>
</body>
</text>
</group>
```

In this example a <group> contains two <text>s, each containing the same document in a different language. The correspondence is indicated using *corresp*. The language is indicated using *xml:lang*, whose value is inherited; both the tag with the *corresp* and the tag pointed to by the *corresp* inherit the value from their immediate parent.

```
<!-- In a placeography called "places.xml" --><place xml:id="LOND1"
corresp="people.xml#LOND2 people.xml#GENI1">
  <placeName>London</placeName>
  <desc>The city of London...</desc>
</place>
<!-- In a literary personography called "people.xml" -->
<person xml:id="LOND2"
corresp="places.xml#LOND1 #GENI1">
  <persName type="lit">London</persName>
  <note>
    <p>Allegorical character representing the city of <placeName ref="places.xml#LOND1">London</p>
  </note>
</person>
<person xml:id="GENI1"
corresp="places.xml#LOND1 #LOND2">
  <persName type="lit">London's Genius</persName>
  <note>
    <p>Personification of London's genius. Appears as an
      allegorical character in mayoral shows.
    </p>
  </note>
</person>
```

In this example, a <place> element containing information about the city of London is linked with two <person> elements in a literary personography. This correspondence represents a slightly looser relationship than the one in the preceding example; there is no sense in which an allegorical character could be substituted for the physical city, or vice versa, but there is obviously a correspondence between them.

synch	<p>(synchronous) points to elements that are synchronous with the current element.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p>
sameAs	<p>points to an element that is the same as the current element.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.pointer</u></p>
copyOf	<p>points to an element of which the current element is a copy.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.pointer</u></p> <p><b>Note</b> Any content of the current element should be ignored. Its true content is that of the element being pointed at.</p>
next	<p>points to the next element of a virtual aggregate of which the current element is part.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.pointer</u></p> <p><b>Note</b> It is recommended that the element indicated be of the same type as the element bearing this attribute.</p>
prev	<p>(previous) points to the previous element of a virtual aggregate of which the current element is part.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.pointer</u></p>

	<p><b>Note</b> It is recommended that the element indicated be of the same type as the element bearing this attribute.</p>
exclude	<p>points to elements that are in exclusive alternation with the current element.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1–# occurrences of <a href="#">teidata.pointer</a> separated by white-space</p>
select	<p>selects one or more alternants; if one alternant is selected, the ambiguity or uncertainty is marked as resolved. If more than one alternant is selected, the degree of ambiguity or uncertainty is marked as reduced by the number of alternants not selected.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1–# occurrences of <a href="#">teidata.pointer</a> separated by white-space</p> <p><b>Note</b> This attribute should be placed on an element which is superordinate to all of the alternants from which the selection is being made.</p>

### 9.3.26. *att.global.rendition*

**att.global.rendition** provides rendering attributes common to all elements in the TEI encoding scheme. [1.3.1.1.3. Rendition Indicators]

<b>Module</b>	tei
<b>Members</b>	<a href="#">att.global</a> [ <a href="#">TEI</a> <a href="#">ab</a> <a href="#">accMat</a> <a href="#">add</a> <a href="#">address</a> <a href="#">app</a> <a href="#">availability</a> <a href="#">body</a> <a href="#">c</a> <a href="#">change</a> <a href="#">cl</a> <a href="#">classCode</a> <a href="#">correspAction</a> <a href="#">correspDesc</a> <a href="#">country</a> <a href="#">creation</a> <a href="#">date</a> <a href="#">del</a> <a href="#">div</a> <a href="#">editor</a> <a href="#">encodingDesc</a> <a href="#">facsimile</a> <a href="#">fileDesc</a> <a href="#">gap</a> <a href="#">graphic</a> <a href="#">handNote</a> <a href="#">handNotes</a> <a href="#">hi</a> <a href="#">idno</a> <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">keywords</a> <a href="#">langUsage</a> <a href="#">language</a> <a href="#">lb</a> <a href="#">lem</a> <a href="#">licence</a> <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">listTranspose</a> <a href="#">listWit</a> <a href="#">m</a> <a href="#">metamark</a> <a href="#">name</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">object- Type</a> <a href="#">org</a> <a href="#">orgName</a> <a href="#">p</a> <a href="#">particDesc</a> <a href="#">pb</a> <a href="#">pc</a> <a href="#">persName</a> <a href="#">person</a> <a href="#">phr</a> <a href="#">physDesc</a> <a href="#">postCode</a> <a href="#">profileDesc</a> <a href="#">ptr</a> <a href="#">pubPlace</a> <a href="#">publicationStmnt</a> <a href="#">publisher</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">rdg</a> <a href="#">ref</a> <a href="#">restore</a> <a href="#">revisionDesc</a> <a href="#">roleName</a> <a href="#">rs</a> <a href="#">s</a> <a href="#">seg</a> <a href="#">seriesStmnt</a> <a href="#">settlement</a> <a href="#">sourceDesc</a> <a href="#">span</a> <a href="#">spanGrp</a> <a href="#">stamp</a> <a href="#">street</a> <a href="#">subst</a> <a href="#">surface</a> <a href="#">surfaceGrp</a> <a href="#">teiHeader</a> <a href="#">term</a> <a href="#">text</a> <a href="#">textClass</a> <a href="#">title</a> <a href="#">titleStmnt</a> <a href="#">transpose</a> <a href="#">variantEncoding</a> <a href="#">w</a> <a href="#">witness</a> ]
<b>Attributes</b>	<p>Attributes</p> <p><b>rend</b> (rendition) indicates how the element in question was rendered or presented in the source text.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1–# occurrences of <a href="#">teidata.word</a> separated by whitespace</p> <pre>&lt;head rend="align(center) case(allcaps)"&gt; &lt;lb/&gt;To The &lt;lb/&gt;Duchesse &lt;lb/&gt;of &lt;lb/&gt;Newcastle, &lt;lb/&gt;On Her &lt;lb/&gt; &lt;hi rend="case(mixed)"&gt;New Blazing-World&lt;/hi&gt;. &lt;/head&gt;</pre> <p><b>Note</b> These Guidelines make no binding recommendations for the values of the <i>rend</i> attribute; the characteristics of visual presentation vary too much from text to text and the decision to record or ignore individual characteristics varies too much from project to project. Some potentially useful conventions are noted from time to time at appropriate points in the Guidelines. The values of the <i>rend</i> attribute are a set of sequence-indeterminate individual tokens separated by whitespace.</p> <p><b>style</b> contains an expression in some formal style definition language which defines the rendering or presentation used for this element in the source text</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.text</a></p> <pre>&lt;head style="text-align: center; font-variant: small-caps"&gt; &lt;lb/&gt;To The &lt;lb/&gt;Duchesse &lt;lb/&gt;of &lt;lb/&gt;Newcastle, &lt;lb/&gt;On Her &lt;lb/&gt; &lt;hi style="font-variant: normal"&gt;New Blazing-World&lt;/hi&gt;.</pre>

	<div data-bbox="719 253 1385 275" style="background-color: #f0f0f0; padding: 2px;">&lt;/head&gt;</div> <p><b>Note</b> Unlike the attribute values of <i>rend</i>, which uses whitespace as a separator, the <i>style</i> attribute may contain whitespace. This attribute is intended for recording inline stylistic information concerning the source, not any particular output.</p> <p>The formal language in which values for this attribute are expressed may be specified using the <code>&lt;styleDefDecl&gt;</code> element in the TEI header.</p> <p>If <i>style</i> and <i>rendition</i> are both present on an element, then <i>style</i> overrides or complements <i>rendition</i>. <i>style</i> should not be used in conjunction with <i>rend</i>, because the latter does not employ a formal style definition language.</p> <p><b>rendition</b> points to a description of the rendering or presentation used for this element in the source text.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1–# occurrences of <a href="#">teidata.pointer</a> separated by whitespace</p> <div data-bbox="719 757 1385 987" style="background-color: #f0f0f0; padding: 2px;"> <pre>&lt;head rendition="#ac #sc"&gt;   &lt;lb/&gt;To The &lt;lb/&gt;Duchesse &lt;lb/&gt;of &lt;lb/&gt;Newcastle, &lt;lb/&gt;On Her   &lt;lb/&gt;   &lt;hi rendition="#normal"&gt;New Blazing-World&lt;/hi&gt;. &lt;/head&gt; &lt;!-- elsewhere... --&gt; &lt;rendition xml:id="sc"   scheme="css"&gt;font-variant: small-caps&lt;/rendition&gt; &lt;rendition xml:id="normal"   scheme="css"&gt;font-variant: normal&lt;/rendition&gt; &lt;rendition xml:id="ac"   scheme="css"&gt;text-align: center&lt;/rendition&gt;</pre> </div> <p><b>Note</b> The <i>rendition</i> attribute is used in a very similar way to the <i>class</i> attribute defined for XHTML but with the important distinction that its function is to describe the appearance of the source text, not necessarily to determine how that text should be presented on screen or paper.</p> <p>If <i>rendition</i> is used to refer to a style definition in a formal language like CSS, it is recommended that it not be used in conjunction with <i>rend</i>. Where both <i>rendition</i> and <i>rend</i> are supplied, the latter is understood to override or complement the former.</p> <p>Each URI provided should indicate a <code>&lt;rendition&gt;</code> element defining the intended rendition in terms of some appropriate style language, as indicated by the <i>scheme</i> attribute.</p>
--	---

### 9.3.27. att.global.responsibility

<b>att.global.responsibility</b> provides attributes indicating the agent responsible for some aspect of the text, the markup or something asserted by the markup, and the degree of certainty associated with it. [1.3.1.1.4. Sources, certainty, and responsibility 3.5. Simple Editorial Changes 11.3.2.2. Hand, Responsibility, and Certainty Attributes 17.3. Spans and Interpretations 13.1.1. Linking Names and Their Referents]	
<b>Module</b>	tei
<b>Members</b>	<a href="#">att.global</a> [ <a href="#">TEI</a> <a href="#">ab</a> <a href="#">accMat</a> <a href="#">add</a> <a href="#">address</a> <a href="#">app</a> <a href="#">availability</a> <a href="#">body</a> <a href="#">c</a> <a href="#">change</a> <a href="#">cl</a> <a href="#">classCode</a> <a href="#">correspAction</a> <a href="#">correspDesc</a> <a href="#">country</a> <a href="#">creation</a> <a href="#">date</a> <a href="#">del</a> <a href="#">div</a> <a href="#">editor</a> <a href="#">encodingDesc</a> <a href="#">facsimile</a> <a href="#">fileDesc</a> <a href="#">gap</a> <a href="#">graphic</a> <a href="#">handNote</a> <a href="#">handNotes</a> <a href="#">hi</a> <a href="#">idno</a> <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">keywords</a> <a href="#">langUsage</a> <a href="#">language</a> <a href="#">lb</a> <a href="#">lem</a> <a href="#">licence</a> <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">listTranspose</a> <a href="#">listWit</a> <a href="#">m</a> <a href="#">metamark</a> <a href="#">name</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">object-Type</a> <a href="#">org</a> <a href="#">orgName</a> <a href="#">p</a> <a href="#">particDesc</a> <a href="#">pb</a> <a href="#">pc</a> <a href="#">persName</a> <a href="#">person</a> <a href="#">phr</a> <a href="#">physDesc</a> <a href="#">postCode</a> <a href="#">profileDesc</a> <a href="#">ptr</a> <a href="#">pubPlace</a> <a href="#">publicationStmnt</a> <a href="#">publisher</a> <a href="#">q</a> <a href="#">quote</a> <a href="#">rdg</a> <a href="#">ref</a> <a href="#">restore</a> <a href="#">revisionDesc</a> <a href="#">roleName</a> <a href="#">rs</a> <a href="#">s</a> <a href="#">seg</a> <a href="#">seriesStmnt</a> <a href="#">settlement</a> <a href="#">sourceDesc</a> <a href="#">span</a> <a href="#">spanGrp</a> <a href="#">stamp</a> <a href="#">street</a> <a href="#">subst</a> <a href="#">surface</a> <a href="#">surfaceGrp</a> <a href="#">teiHeader</a> <a href="#">term</a> <a href="#">text</a> <a href="#">textClass</a> <a href="#">title</a> <a href="#">titleStmnt</a> <a href="#">transpose</a> <a href="#">variantEncoding</a> <a href="#">w</a> <a href="#">witness</a> ]
<b>Attributes</b>	<p>Attributes</p> <p><b>cert</b> (certainty) signifies the degree of certainty associated with the intervention or interpretation.</p> <p><b>Status</b> Optional</p>

	<p><b>Datatype</b> <u>teidata.probCert</u></p> <p>(responsible party) indicates the agency responsible for the intervention or interpretation, for example an editor or transcriber.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1–# occurrences of <u>teidata.pointer</u> separated by white-space</p> <p><b>Note</b> To reduce the ambiguity of a <i>resp</i> pointing directly to a person or organization, we recommend that <i>resp</i> be used to point not to an agent (<u>&lt;person&gt;</u> or <u>&lt;org&gt;</u>) but to a <u>&lt;respStmt&gt;</u>, <u>&lt;author&gt;</u>, <u>&lt;editor&gt;</u> or similar element which clarifies the exact role played by the agent. Pointing to multiple <u>&lt;respStmt&gt;</u>s allows the encoder to specify clearly each of the roles played in part of a TEI file (creating, transcribing, encoding, editing, proofing etc.).</p>
<b>Example</b>	<pre>Blessed are the &lt;choice&gt; &lt;sic&gt;cheesemakers&lt;/sic&gt; &lt;corr resp="#editor" cert="high"&gt;peacemakers&lt;/corr&gt; &lt;/choice&gt;: for they shall be called the children of God.</pre>
<b>Example</b>	<pre>&lt;!-- in the &lt;text&gt; ... --&gt;&lt;lg&gt; &lt;!-- ... --&gt; &lt;l&gt;Punkes, Panders, ba#e extortionizing   sla&lt;choice&gt;     &lt;sic&gt;n&lt;/sic&gt;     &lt;corr resp="#JENS1_transcriber"&gt;u&lt;/corr&gt;   &lt;/choice&gt;es,&lt;/l&gt; &lt;!-- ... --&gt; &lt;/lg&gt; &lt;!-- in the &lt;teiHeader&gt; ... --&gt; &lt;!-- ... --&gt; &lt;respStmt xml:id="JENS1_transcriber"&gt;   &lt;resp when="2014"&gt;Transcriber&lt;/resp&gt;   &lt;name&gt;Janelle Jenstad&lt;/name&gt; &lt;/respStmt&gt;</pre>

### 9.3.28. att.global.source

**att.global.source** provides attributes used by elements to point to an external source. [1.3.1.1.4. Sources, certainty, and responsibility 3.3.3. Quotation 8.3.4. Writing]

<b>Module</b>	tei
<b>Members</b>	<p><u>att.global</u>[<u>TEI</u> <u>ab</u> <u>accMat</u> <u>add</u> <u>address</u> <u>app</u> <u>availability</u> <u>body</u> <u>c</u> <u>change</u> <u>cl</u> <u>classCode</u> <u>correspAction</u> <u>correspDesc</u> <u>country</u> <u>creation</u> <u>date</u> <u>del</u> <u>div</u> <u>editor</u> <u>encodingDesc</u> <u>facsimile</u> <u>fileDesc</u> <u>gap</u> <u>graphic</u> <u>handNote</u> <u>handNotes</u> <u>hi</u> <u>idno</u> <u>interp</u> <u>interpGrp</u> <u>keywords</u> <u>langUsage</u> <u>language</u> <u>lb</u> <u>lem</u> <u>licence</u> <u>listOrg</u> <u>listPerson</u> <u>listTranspose</u> <u>listWit</u> <u>m</u> <u>metamark</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>object-Type</u> <u>org</u> <u>orgName</u> <u>p</u> <u>particDesc</u> <u>pb</u> <u>pc</u> <u>persName</u> <u>person</u> <u>phr</u> <u>physDesc</u> <u>postCode</u> <u>profileDesc</u> <u>ptr</u> <u>pubPlace</u> <u>publicationStmt</u> <u>publisher</u> <u>q</u> <u>quote</u> <u>rdg</u> <u>ref</u> <u>restore</u> <u>revisionDesc</u> <u>roleName</u> <u>rs</u> <u>s</u> <u>seg</u> <u>seriesStmt</u> <u>settlement</u> <u>sourceDesc</u> <u>span</u> <u>spanGrp</u> <u>stamp</u> <u>street</u> <u>subst</u> <u>surface</u> <u>surfaceGrp</u> <u>teiHeader</u> <u>term</u> <u>text</u> <u>textClass</u> <u>title</u> <u>titleStmt</u> <u>transpose</u> <u>variantEncoding</u> <u>w</u> <u>witness</u>]</p>
<b>Attributes</b>	<p>Attributes</p> <p><b>source</b> specifies the source from which some aspect of this element is drawn.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1–# occurrences of <u>teidata.pointer</u> separated by white-space</p> <p><b>Note</b> The <i>source</i> attribute points to an external source. When used on elements describing schema components such as <u>&lt;schemaSpec&gt;</u> or <u>&lt;moduleRef&gt;</u> it identifies the source from which declarations for the components of the object being defined may be obtained. On other elements it provides a pointer to the bibliographical source from which a quotation or citation is drawn. In either case, the location may be provided using any form of URI, for example an absolute URI, a relative</p>

	<p>URI, or private scheme URI that is expanded to an absolute URI as documented in a <code>&lt;prefixDef&gt;</code>.</p> <p>If more than one location is specified, the default assumption is that the required source should be obtained by combining the resources indicated.</p>
<b>Example</b>	<pre>&lt;p&gt; &lt;!-- ... --&gt; As Willard McCarty (&lt;bibl xml:id="mcc_2012"&gt;2012, p.2&lt;/bibl&gt;) tells us, &lt;quote source="#mcc_2012"&gt;     term.&lt;/quote&gt; &lt;!-- ... --&gt; &lt;/p&gt;</pre>
<b>Example</b>	<pre>&lt;p&gt; &lt;!-- ... --&gt; &lt;quote source="#chicago_15_ed"&gt;Grammatical theories are in flux, and the more we learn, the     less we seem to know.&lt;/quote&gt; &lt;!-- ... --&gt; &lt;/p&gt; &lt;!-- ... --&gt; &lt;bibl xml:id="chicago_15_ed"&gt; &lt;title level="m"&gt;The Chicago Manual of Style&lt;/title&gt;, &lt;edition&gt;15th edition&lt;/edition&gt;. &lt;pubPlace&gt;Chicago&lt;/pubPlace&gt;: &lt;publisher&gt;University of     Chicago Press&lt;/publisher&gt; (&lt;date&gt;2003&lt;/date&gt;), &lt;biblScope unit="page"&gt;p.147&lt;/biblScope&gt; &lt;/bibl&gt;</pre>
<b>Example</b>	<pre>&lt;elementRef key="p" source="tei:2.0.1"/&gt;</pre> <p>Include in the schema an element named <code>&lt;p&gt;</code> available from the TEI P5 2.0.1 release.</p>
<b>Example</b>	<pre>&lt;schemaSpec ident="myODD"     source="mycompiledODD.xml"&gt; &lt;!-- further declarations specifying the components required --&gt; &lt;/schemaSpec&gt;</pre> <p>Create a schema using components taken from the file <code>mycompiledODD.xml</code>.</p>

### 9.3.29. att.handFeatures

**att.handFeatures** provides attributes describing aspects of the hand in which a manuscript is written. [11.3.2.1. Document Hands]

<b>Module</b>	tei										
<b>Members</b>	<u>handNote</u>										
<b>Attributes</b>	<p>Attributes</p> <table> <tr> <td>scribe</td><td> <p>gives a name or other identifier for the scribe believed to be responsible for this hand.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.name</u></p> </td></tr> <tr> <td>scribeRef</td><td> <p>points to a full description of the scribe concerned, typically supplied by a <code>&lt;person&gt;</code> element elsewhere in the description.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p> </td></tr> <tr> <td>script</td><td> <p>characterizes the particular script or writing style used by this hand, for example <i>secretary</i>, <i>copperplate</i>, <i>Chancery</i>, <i>Italian</i>, etc.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.name</u> separated by whitespace</p> </td></tr> <tr> <td>scriptRef</td><td> <p>points to a full description of the script or writing style used by this hand, typically supplied by a <code>&lt;scriptNote&gt;</code> element elsewhere in the description.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p> </td></tr> <tr> <td>medium</td><td> <p>describes the tint or type of ink, e.g. <i>brown</i>, or other writing medium, e.g. <i>pencil</i></p> <p><b>Status</b> Optional</p> </td></tr> </table>	scribe	<p>gives a name or other identifier for the scribe believed to be responsible for this hand.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.name</u></p>	scribeRef	<p>points to a full description of the scribe concerned, typically supplied by a <code>&lt;person&gt;</code> element elsewhere in the description.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p>	script	<p>characterizes the particular script or writing style used by this hand, for example <i>secretary</i>, <i>copperplate</i>, <i>Chancery</i>, <i>Italian</i>, etc.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.name</u> separated by whitespace</p>	scriptRef	<p>points to a full description of the script or writing style used by this hand, typically supplied by a <code>&lt;scriptNote&gt;</code> element elsewhere in the description.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p>	medium	<p>describes the tint or type of ink, e.g. <i>brown</i>, or other writing medium, e.g. <i>pencil</i></p> <p><b>Status</b> Optional</p>
scribe	<p>gives a name or other identifier for the scribe believed to be responsible for this hand.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.name</u></p>										
scribeRef	<p>points to a full description of the scribe concerned, typically supplied by a <code>&lt;person&gt;</code> element elsewhere in the description.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p>										
script	<p>characterizes the particular script or writing style used by this hand, for example <i>secretary</i>, <i>copperplate</i>, <i>Chancery</i>, <i>Italian</i>, etc.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.name</u> separated by whitespace</p>										
scriptRef	<p>points to a full description of the script or writing style used by this hand, typically supplied by a <code>&lt;scriptNote&gt;</code> element elsewhere in the description.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p>										
medium	<p>describes the tint or type of ink, e.g. <i>brown</i>, or other writing medium, e.g. <i>pencil</i></p> <p><b>Status</b> Optional</p>										

	<p><b>Datatype</b> 1-# occurrences of <u>teidata.enumerated</u> separated by whitespace</p> <p>scope specifies how widely this hand is used in the manuscript.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Legal values are:</b> <b>sole</b> only this hand is used throughout the manuscript</p> <p><b>major</b> this hand is used through most of the manuscript</p> <p><b>minor</b> this hand is used occasionally in the manuscript</p>
<b>Note</b>	Usually either <i>script</i> or <i>scriptRef</i> , and similarly, either <i>scribe</i> or <i>scribeRef</i> , will be supplied.

### 9.3.30. att.internetMedia

<b>att.internetMedia</b> provides attributes for specifying the type of a computer resource using a standard taxonomy.	
<b>Module</b>	tei
<b>Members</b>	<u>att.media[graphic]</u> <u>ptr</u> <u>ref</u>
<b>Attributes</b>	<p>Attributes</p> <p><b>mimeType</b> (MIME media type) specifies the applicable multimedia internet mail extension (MIME) media type</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.word</u> separated by whitespace</p>
<b>Example</b>	<p>In this example <i>mimeType</i> is used to indicate that the URL points to a TEI XML file encoded in UTF-8.</p> <pre>&lt;ref mimeType="application/tei+xml; charset=UTF-8" target="http://sourceforge.net/p/tei/code/HEAD/tree/trunk/P5/Source/guidelines-en.xml"/&gt;</pre>
<b>Note</b>	This attribute class provides an attribute for describing a computer resource, typically available over the internet, using a value taken from a standard taxonomy. At present only a single taxonomy is supported, the Multipurpose Internet Mail Extensions (MIME) Media Type system. This typology of media types is defined by the Internet Engineering Task Force in RFC 2046. The list of types is maintained by the Internet Assigned Numbers Authority (IANA). The <i>mimeType</i> attribute must have a value taken from this list.

### 9.3.31. att.lexicographic.normalized

<b>att.lexicographic.normalized</b> provides attributes for usage within word-level elements in the analysis module and within lexicographic microstructure in the dictionaries module.	
<b>Module</b>	analysis
<b>Members</b>	<u>att.linguistic[pc w]</u>
<b>Attributes</b>	<p>Attributes</p> <p><b>norm</b> (normalized) provides the normalized/standardized form of information present in the source text in a non-normalized form</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.text</u></p> <p>Normalization of part-of-speech information within a dictionary entry.</p> <pre>&lt;gramGrp&gt; &lt;pos norm="noun"&gt;n&lt;/pos&gt; &lt;/gramGrp&gt;</pre> <p>Normalization of a source form in a tokenized historical corpus.</p> <pre>&lt;s&gt; &lt;w&gt;for&lt;/w&gt; &lt;w norm="virtue's"&gt;vertues&lt;/w&gt; &lt;w&gt;sake&lt;/w&gt; &lt;/s&gt;</pre>

	<pre> &lt;s&gt;   &lt;w norm="persuasion"&gt;perswasion&lt;/w&gt;   &lt;w&gt;of&lt;/w&gt;   &lt;w norm="Unity"&gt;Vnitie&lt;/w&gt; &lt;/s&gt; </pre> <p>Example of normalization from Aviso. Relation oder Zeitung. Wolfenbüttel, 1609. In: Deutsches Textarchiv.</p> <pre> &lt;s&gt;   &lt;w norm="freiwillig"&gt;freywillig&lt;/w&gt;   &lt;pc norm=","&gt;     join="left"&gt;/&lt;/pc&gt;   &lt;w norm="unbedrängt"&gt;vnbedra#ngt&lt;/w&gt;   &lt;w norm="und"&gt;vnd&lt;/w&gt;   &lt;w norm="unverhindert"&gt;vnuerhindert&lt;/w&gt; &lt;/s&gt;  &lt;w norm="Teil"&gt;Theyll&lt;/w&gt;  &lt;w norm="Freude"&gt;Frewde&lt;/w&gt; </pre> <p><b>orig</b> (original) gives the original string or is the empty string when the element does not appear in the source text.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.text</a></p> <p>Example from a language documentation project of the Mixtepec-Mixtec language (ISO 639-3: 'mix'). This is a use case where speakers spell something incorrectly but we would like to preserve it for any number of reasons, the use of <i>orig</i> is essential and could have uses for both the speaker to see past mistakes, researchers to get insight into how untrained speakers write their language instinctually (in contrast to prescribed convention), etc.:</p> <pre> &lt;w orig="ntsa sia'i"&gt;ntsasia'i&lt;/w&gt; </pre> <p>Example from the EarlyPrint project. Fragment of text where obvious errors have been corrected but the original forms remain recorded:</p> <pre> &lt;w lemma="he"   pos="pns"   xml:id="blafj-003-a-0950"&gt;he&lt;/w&gt; &lt;w lemma="have"   pos="vvz"   xml:id="blafj-003-a-0960"&gt;hath&lt;/w&gt; &lt;w lemma="bring"   pos="vvn"   xml:id="blafj-003-a-0970"&gt;brought&lt;/w&gt; &lt;w lemma="forth"   pos="av"   xml:id="blafj-003-a-0980"   orig="sorth"&gt;forth&lt;/w&gt; </pre> <p>An example from the EarlyPrint project showing the use of both <i>norm</i> and <i>orig</i>. The <i>orig</i> attribute preserves the original version (sometimes with spelling errors, often with printer abbreviations), the element content resolves printer abbreviations but retains the original orthography, and the <i>norm</i> attribute holds normalized values:</p> <pre> &lt;w lemma="commandment"   pos="nl"   norm="commandment"   xml:id="b9avr-018-a-7720"   orig="commandeme#t"&gt;commandement&lt;/w&gt; </pre>
<b>Note</b>	It needs to be stressed that the two attributes in this class are meant for strictly lexicographic and linguistic uses, and not for editorial interventions. For the latter, the mechanism based on <code>&lt;choice&gt;</code> , <code>&lt;orig&gt;</code> , and <code>&lt;reg&gt;</code> needs to be employed.

### 9.3.32. att.linguistic

<b>att.linguistic</b> provides a set of attributes concerning linguistic features of tokens, for usage within token-level elements, specifically <code>&lt;w&gt;</code> and <code>&lt;pc&gt;</code> in the analysis module. [17.4.2. Lightweight Linguistic Annotation]	
<b>Module</b>	analysis
<b>Members</b>	<code>pc</code> <code>w</code>
<b>Attributes</b>	Attributes <a href="#">att.lexicographic.normalized</a> ( <code>@norm</code> , <code>@orig</code> )

lemma	<p>provides a lemma (base form) for the word, typically uninflected and serving both as an identifier (e.g. in dictionary contexts, as a headword), and as a basis for potential inflections.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.text</a></p> <pre>&lt;w lemma="wife"&gt;wives&lt;/w&gt; &lt;w lemma="Arznei"&gt;Artzeneyen&lt;/w&gt;</pre>
lemmaRef	<p>provides a pointer to a definition of the lemma for the word, for example in an online lexicon.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.pointer</a></p> <pre>&lt;w type="verb"   lemma="hit"   lemmaRef="http://www.example.com/lexicon/hitvb.xml"&gt;hitt&lt;m type="suffix"&gt;ing&lt;/m&gt; &lt;/w&gt;</pre>
pos	<p>(part of speech) indicates the part of speech assigned to a token (i.e. information on whether it is a noun, adjective, or verb), usually according to some official reference vocabulary (e.g. for German: STTS, for English: CLAWS, for Polish: NKJP, etc.).</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.text</a></p> <p>The German sentence ‘Wir fahren in den Urlaub.’ tagged with the Stuttgart-Tuebingen-Tagset (STTS).</p> <pre>&lt;s&gt;   &lt;w pos="PPER"&gt;Wir&lt;/w&gt;   &lt;w pos="VVFIN"&gt;fahren&lt;/w&gt;   &lt;w pos="APPR"&gt;in&lt;/w&gt;   &lt;w pos="ART"&gt;den&lt;/w&gt;   &lt;w pos="NN"&gt;Urlaub&lt;/w&gt;   &lt;w pos="\$."&gt;.&lt;/w&gt; &lt;/s&gt;</pre> <p>The English sentence ‘We're going to Brazil.’ tagged with the CLAWS-5 tagset, arranged inline (with significant whitespace).</p> <pre>&lt;p&gt;&lt;w pos="PNP"&gt;We&lt;/w&gt;&lt;w pos="VBB"&gt;'re&lt;/w&gt; &lt;w pos="VVG"&gt;going&lt;/w&gt; &lt;w pos="PRP"&gt;to&lt;/w&gt; &lt;w po</pre> <p>The English sentence ‘We're going on vacation to Brazil for a month!’ tagged with the CLAWS-7 tagset and arranged sequentially.</p> <pre>&lt;p&gt;   &lt;w pos="PPIS2"&gt;We&lt;/w&gt;   &lt;w pos="VBR"&gt;'re&lt;/w&gt;   &lt;w pos="VVG"&gt;going&lt;/w&gt;   &lt;w pos="II"&gt;on&lt;/w&gt;   &lt;w pos="NN1"&gt;vacation&lt;/w&gt;   &lt;w pos="II"&gt;to&lt;/w&gt;   &lt;w pos="NP1"&gt;Brazil&lt;/w&gt;   &lt;w pos="IF"&gt;for&lt;/w&gt;   &lt;w pos="AT1"&gt;a&lt;/w&gt;   &lt;w pos="NNT1"&gt;month&lt;/w&gt;   &lt;pc pos="!"&gt;!&lt;/pc&gt; &lt;/p&gt;</pre>
msd	<p>(morphosyntactic description) supplies morphosyntactic information for a token, usually according to some official reference vocabulary (e.g. for German: STTS-large tagset; for a feature description system designed as (pragmatically) universal, see Universal Features).</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.text</a></p> <pre>&lt;ab&gt;   &lt;w pos="PPER"     msd="1.Pl.*.Nom"&gt;Wir&lt;/w&gt;   &lt;w pos="VVFIN"     msd="1.Pl.Pres.Ind"&gt;fahren&lt;/w&gt;   &lt;w pos="APPR"     msd="--"&gt;in&lt;/w&gt;   &lt;w pos="ART"     msd="Def.Masc.Akk.Sg"&gt;den&lt;/w&gt;</pre>

	<div>&lt;w pos="NN" msd="Masc.Akk.Sg"&gt;Urlaub&lt;/w&gt; &lt;pc pos="\$. " msd="--"&gt;.&lt;/pc&gt; &lt;/ab&gt;</div> <p>join</p> <p>when present, it provides information on whether the token in question is adjacent to another, and if so, on which side. The definition of this attribute is adapted from ISO MAF (Morpho-syntactic Annotation Framework), ISO 24611:2012.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.text</a></p> <p><b>Legal values</b> no</p> <p><b>are:</b> (the token is not adjacent to another)</p> <p><b>left</b> (there is no whitespace on the left side of the token)</p> <p><b>right</b> (there is no whitespace on the right side of the token)</p> <p><b>both</b> (there is no whitespace on either side of the token)</p> <p><b>over-</b></p> <p><b>lap</b> (the token overlaps with another; other devices (specifying the extent and the area of overlap) are needed to more precisely locate this token in the character stream)</p> <p>The example below assumes that the lack of whitespace is marked redundantly, by using the appropriate values of <i>join</i>.</p> <div>&lt;s&gt; &lt;pc join="right"&gt;"&lt;/pc&gt; &lt;w join="left"&gt;Friends&lt;/w&gt; &lt;w&gt;will&lt;/w&gt; &lt;w&gt;be&lt;/w&gt; &lt;w join="right"&gt;friends&lt;/w&gt; &lt;pc join="both"&gt;.&lt;/pc&gt; &lt;pc join="left"&gt;"&lt;/pc&gt; &lt;/s&gt;</div> <p>Note that a project may make a decision to only indicate lack of whitespace in one direction, or do that non-redundantly. The existing proposal is the broadest possible, on the assumption that we adopt the "streamable view", where all the information on the current element needs to be represented locally.</p> <p>The English sentence ‘We’re going on vacation.’ tagged with the CLAWS-5 tagset, arranged sequentially, tagged on the assumption that only the lack of the preceding whitespace is indicated.</p> <div>&lt;p&gt; &lt;w pos="PNP"&gt;We&lt;/w&gt; &lt;w pos="VBB" join="left"&gt;'re&lt;/w&gt; &lt;w pos="VVG"&gt;going&lt;/w&gt; &lt;w pos="PRP"&gt;on&lt;/w&gt; &lt;w pos="NN1"&gt;vacation&lt;/w&gt; &lt;pc pos="PUN" join="left"&gt;.&lt;/pc&gt; &lt;/p&gt;</div>
Note	These attributes make it possible to encode simple language corpora and to add a layer of linguistic information to any tokenized resource. See section 17.4.2. Lightweight Linguistic Annotation for discussion.

9.3.33. att.media

**att.media** provides attributes for specifying display and related properties of external media.

<b>Module</b>	tei
<b>Members</b>	<u>graphic</u>
<b>Attributes</b>	<p>Attributes <u>att.internetMedia</u> (@mimeType)</p> <p>width                      Where the media are displayed, indicates the display width  <b>Status</b>                      Optional  <b>Datatype</b>                      <u>teidata.outputMeasurement</u></p> <p>height                      Where the media are displayed, indicates the display height  <b>Status</b>                      Optional  <b>Datatype</b>                      <u>teidata.outputMeasurement</u></p> <p>scale                      Where the media are displayed, indicates a scale factor to be applied when generating the desired display size  <b>Status</b>                      Optional  <b>Datatype</b>                      <u>teidata.numeric</u></p>

### 9.3.34. *att.msExcerpt*

<b>att.msExcerpt</b> (manuscript excerpt) provides attributes used to describe excerpts from a manuscript placed in a description thereof. [10.6. Intellectual Content]	
<b>Module</b>	msdescription
<b>Members</b>	<u>quote</u>
<b>Attributes</b>	<p>Attributes</p> <p>defective                      indicates whether the passage being quoted is defective, i.e. incomplete through loss or damage.  <b>Status</b>                      Optional  <b>Datatype</b>                      <u>teidata.xTruthValue</u></p>
<b>Note</b>	In the case of an incipit, indicates whether the incipit as given is defective, i.e. the first words of the text as preserved, as opposed to the first words of the work itself. In the case of an explicit, indicates whether the explicit as given is defective, i.e. the final words of the text as preserved, as opposed to what the closing words would have been had the text of the work been whole.

### 9.3.35. *att.naming*

<b>att.naming</b> provides attributes common to elements which refer to named persons, places, organizations etc. [3.6.1. Refer-ring Strings 13.3.6. Names and Nyms]	
<b>Module</b>	tei
<b>Members</b>	<u>att.personal</u> [ <u>name</u> <u>orgName</u> <u>persName</u> <u>roleName</u> ] <u>country</u> <u>editor</u> <u>pubPlace</u> <u>rs</u> <u>settlement</u>
<b>Attributes</b>	<p>Attributes <u>att.canonical</u> (@key, @ref)</p> <p>role                      may be used to specify further information about the entity referenced by this name in the form of a set of whitespace-separated values, for example the occupation of a person, or the status of a place.  <b>Status</b>                      Optional  <b>Datatype</b>                      1-# occurrences of <u>teidata.enumerated</u> separated by whitespace</p> <p>nymRef                      (reference to the canonical name) provides a means of locating the canonical form (<i>nym</i>) of the names associated with the object named by the element bearing it.  <b>Status</b>                      Optional  <b>Datatype</b>                      1-# occurrences of <u>teidata.pointer</u> separated by white-space  <b>Note</b>                      The value must point directly to one or more XML elements by means of one or more URIs, separated by</p>

	whitespace. If more than one is supplied, the implication is that the name is associated with several distinct canonical names.
--	---

### 9.3.36. *att.notated*

<b>att.notated</b> provides attributes to indicate any specialised notation used for element content.	
<b>Module</b>	tei
<b>Members</b>	<u>c</u> <u>cl</u> <u>m</u> <u>phr</u> <u>quote</u> <u>s</u> <u>seg</u> <u>w</u>
<b>Attributes</b>	<p>Attributes</p> <p>notation names the notation used for the content of the element.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p>

### 9.3.37. *att.personal*

<b>att.personal</b> (attributes for components of names usually, but not necessarily, personal names) common attributes for those elements which form part of a name usually, but not necessarily, a personal name. [13.2.1. Personal Names]	
<b>Module</b>	tei
<b>Members</b>	<u>name</u> <u>orgName</u> <u>persName</u> <u>roleName</u>
<b>Attributes</b>	<p>Attributes <u>att.naming</u> (@role, @nymRef) (<u>att.canonical</u> (@key, @ref))</p> <p>full indicates whether the name component is given in full, as an abbreviation or simply as an initial.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Legal values</b> <b>yes</b></p> <p><b>are:</b> (yes) the name component is spelled out in full. [Default]</p> <p><b>abb</b> (abbreviated) the name component is given in an abbreviated form.</p> <p><b>init</b> (initial letter) the name component is indicated only by one initial.</p> <p>sort (sort) specifies the sort order of the name component in relation to others within the name.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.count</u></p>

### 9.3.38. *att.placement*

<b>att.placement</b> provides attributes for describing where on the source page or object a textual element appears. [3.5.3. Additions, Deletions, and Omissions 11.3.1.4. Additions and Deletions]	
<b>Module</b>	tei
<b>Members</b>	<u>add</u> <u>metamark</u> <u>note</u> <u>noteGrp</u>
<b>Attributes</b>	<p>Attributes</p> <p>place specifies where this item is placed.</p> <p><b>Status</b> Recommended</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.enumerated</u> separated by whitespace</p> <p><b>Suggested values include:</b> <b>top</b> at the top of the page</p>

	<p><b>bot-</b> <b>tom</b> at the foot of the page</p> <p><b>mar-</b> <b>gin</b> in the margin (left, right, or both)</p> <p><b>op-</b> <b>po-</b> on the opposite, i.e. facing, page <b>site</b></p> <p><b>over-</b> <b>leaf</b> on the other side of the leaf</p> <p><b>above</b> above the line</p> <p><b>right</b> to the right, e.g. to the right of a vertical line of text, or to the right of a figure</p> <p><b>be-</b> <b>low</b> below the line</p> <p><b>left</b> to the left, e.g. to the left of a vertical line of text, or to the left of a figure</p> <p><b>end</b> at the end of e.g. chapter or volume.</p> <p><b>in-</b> <b>line</b> within the body of the text.</p> <p><b>in-</b> <b>space</b> a predefined space, for example left by an earlier scribe.</p> <pre>&lt;add place="margin"&gt;[An addition written in the margin]&lt;/add&gt; &lt;add place="bottom opposite"&gt;[An addition written at the foot of the current page and also on the facing page]&lt;/add&gt; &lt;note place="bottom"&gt;Ibid, p.7&lt;/note&gt;</pre>
--	--

### 9.3.39. att.pointing

**att.pointing** provides a set of attributes used by all elements which point to other elements by means of one or more URI references. [1.3.1.1.2. Language Indicators 3.7. Simple Links and Cross-References]

<b>Module</b>	tei
<b>Members</b>	<a href="#">licence</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">ptr</a> <a href="#">ref</a> <a href="#">span</a> <a href="#">term</a>
<b>Attributes</b>	<p>Attributes</p> <p><b>targetLang</b> specifies the language of the content to be found at the destination referenced by <i>target</i>, using a 'language tag' generated according to BCP 47.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.language</a></p> <p><b>Schematron</b> &lt;sch:rule context="tei:*[not(self::tei:schemaSpec)][@targetLang]"&gt;  &lt;sch:assert test="@target"&gt;@targetLang should only be used on &lt;sch:name/&gt; if @target is specified.&lt;/sch:assert&gt; &lt;/sch:rule&gt;</p> <pre>&lt;linkGrp xml:id="pol-swh_aln_2.1-linkGrp"&gt; &lt;ptr xml:id="pol-swh_aln_2.1.1-ptr" target="pol/UDHR/text.xml#pol_txt_1-head" type="tuv" targetLang="pl"/&gt; &lt;ptr xml:id="pol-swh_aln_2.1.2-ptr" target="swh/UDHR/text.xml#swh_txt_1-head" type="tuv" targetLang="sw"/&gt; &lt;/linkGrp&gt;</pre>

<p>In the example above, the &lt;linkGrp&gt; combines pointers at parallel fragments of the <i>Universal Declaration of Human Rights</i>: one of them is in Polish, the other in Swahili.</p>	
target	<p><b>Note</b> The value must conform to BCP 47. If the value is a private use code (i.e., starts with x- or contains -x-), a &lt;language&gt; element with a matching value for its <i>ident</i> attribute should be supplied in the TEI header to document this value. Such documentation may also optionally be supplied for non-private-use codes, though these must remain consistent with their IETFInternet Engineering Task Force definitions.</p>
	<p>specifies the destination of the reference by supplying one or more URI References</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1–# occurrences of <u>teidata.pointer</u> separated by whitespace</p> <p><b>Note</b> One or more syntactically valid URI references, separated by whitespace. Because whitespace is used to separate URIs, no whitespace is permitted inside a single URI. If a whitespace character is required in a URI, it should be escaped with the normal mechanism, e.g. TEI%20Consortium.</p>
evaluate	<p>(evaluate) specifies the intended meaning when the target of a pointer is itself a pointer.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Legal values all are:</b></p> <p><b>all</b> if the element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.</p> <p><b>one</b> if the element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.</p> <p><b>none</b> no further evaluation of targets is carried out beyond that needed to find the element specified in the pointer's target.</p> <p><b>Note</b> If no value is given, the application program is responsible for deciding (possibly on the basis of user input) how far to trace a chain of pointers.</p>

### 9.3.40. att.ranging

att.ranging provides attributes for describing numerical ranges.	
<b>Module</b>	tei
<b>Members</b>	att.dimensions[add date del gap restore subst]
<b>Attributes</b>	<p>Attributes</p> <p>atLeast gives a minimum estimated value for the approximate measurement.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.numeric</u></p> <p>atMost gives a maximum estimated value for the approximate measurement.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.numeric</u></p>

	min	where the measurement summarizes more than one observation or a range, supplies the minimum value observed. <b>Status</b> Optional <b>Datatype</b> <a href="#">teidata.numeric</a>
	max	where the measurement summarizes more than one observation or a range, supplies the maximum value observed. <b>Status</b> Optional <b>Datatype</b> <a href="#">teidata.numeric</a>
	confidence	specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by <i>min</i> and <i>max</i> , or the proportion of observed values that fall within that range. <b>Status</b> Optional <b>Datatype</b> <a href="#">teidata.probability</a>
<b>Example</b>	<pre>The MS. was lost in transmission by mail from &lt;del rend="overstrike"&gt; &lt;gap reason="illegible"   extent="one or two letters" atLeast="1" atMost="2" unit="chars"/&gt; &lt;/del&gt; Philadelphia to the Graphic office, New York.</pre>	

### 9.3.41. *att.resourced*

<b>att.resourced</b> provides attributes by which a resource (such as an externally held media file) may be located.		
<b>Module</b>	tei	
<b>Members</b>	<a href="#">graphic</a>	
<b>Attributes</b>	Attributes	
	url	(uniform resource locator) specifies the URL from which the media concerned may be obtained. <b>Status</b> Required <b>Datatype</b> <a href="#">teidata.pointer</a>

### 9.3.42. *att.segLike*

<b>att.segLike</b> provides attributes for elements used for arbitrary segmentation. [16.3. Blocks, Segments, and Anchors 17.1. Linguistic Segment Categories]		
<b>Module</b>	tei	
<b>Members</b>	<a href="#">c</a> <a href="#">cl</a> <a href="#">m</a> <a href="#">pc</a> <a href="#">phr</a> <a href="#">s</a> <a href="#">seg</a> <a href="#">w</a>	
<b>Attributes</b>	Attributes <a href="#">att.datcat</a> (@datcat, @valueDatcat) <a href="#">att.fragmentable</a> (@part)	
	function	(function) characterizes the function of the segment. <b>Status</b> Optional <b>Datatype</b> <a href="#">teidata.enumerated</a> <b>Note</b> Attribute values will often vary depending on the type of element to which they are attached. For example, a <a href="#">&lt;cl&gt;</a> , may take values such as coordinate, subject, adverbial etc. For a <a href="#">&lt;phr&gt;</a> , such values as subject, predicate etc. may be more appropriate. Such constraints will typically be implemented by a project-defined customization.

### 9.3.43. *att.sortable*

<b>att.sortable</b> provides attributes for elements in lists or groups that are sortable, but whose sorting key cannot be derived mechanically from the element content. [9.1. Dictionary Body and Overall Structure]		
<b>Module</b>	tei	
<b>Members</b>	<a href="#">correspAction</a> <a href="#">idno</a> <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">listWit</a> <a href="#">org</a> <a href="#">person</a> <a href="#">term</a> <a href="#">witness</a>	
<b>Attributes</b>	Attributes	

	<p><b>sortKey</b> supplies the sort key for this element in an index, list or group which contains it.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.word</u></p> <pre>David's other principal backer, Josiah ha-Kohen &lt;index indexName="NAMES"&gt;   &lt;term sortKey="Azarya_Josiah_Kohen"&gt;Josiah ha-Kohen b. Azarya&lt;/term&gt; &lt;/index&gt; b. Azarya, son of one of the last gaons of Sura was David's own first cousin.</pre> <p><b>Note</b> The sort key is used to determine the sequence and grouping of entries in an index. It provides a sequence of characters which, when sorted with the other values, will produced the desired order; specifics of sort key construction are application-dependent</p> <p>Dictionary order often differs from the collation sequence of machine-readable character sets; in English-language dictionaries, an entry for <i>4-H</i> will often appear alphabetized under 'fourh', and <i>McCoy</i> may be alphabetized under 'maccoy', while <i>A1</i>, <i>A4</i>, and <i>A5</i> may all appear in numeric order 'alphabetized' between 'a-' and 'AA'. The sort key is required if the orthography of the dictionary entry does not suffice to determine its location.</p>
--	---

### 9.3.44. att.spanning

<b>att.spanning</b> provides attributes for elements which delimit a span of text by pointing mechanisms rather than by enclosing it. [11.3.1.4. Additions and Deletions 1.3.1. Attribute Classes]	
<b>Module</b>	tei
<b>Members</b>	<u>lb</u> <u>metamark</u> <u>pb</u>
<b>Attributes</b>	<p>Attributes</p> <p><b>spanTo</b> indicates the end of a span initiated by the element bearing this attribute.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.pointer</u></p> <p><b>Schematron</b> The @spanTo attribute must point to an element following the current element  &lt;sch:rule context="tei:*[@spanTo]"&gt; &lt;sch:assert test="id(substring(@spanTo,2)) and following::*[@xml:id=substring(current()/@spanTo,2)]"&gt;The element indicated by @spanTo (&lt;sch:value-of select="@spanTo"/&gt;) must follow the current element  &lt;sch:name/&gt; &lt;/sch:assert&gt; &lt;/sch:rule&gt;</p>
<b>Note</b>	The span is defined as running in document order from the start of the content of the pointing element to the end of the content of the element pointed to by the <i>spanTo</i> attribute (if any). If no value is supplied for the attribute, the assumption is that the span is coextensive with the pointing element. If no content is present, the assumption is that the starting point of the span is immediately following the element itself.

### 9.3.45. att.textCritical

<b>att.textCritical</b> defines a set of attributes common to all elements representing variant readings in text critical work. [12.1. The Apparatus Entry, Readings, and Witnesses]	
<b>Module</b>	textcrit
<b>Members</b>	<u>lem</u> <u>rdg</u>
<b>Attributes</b>	<p>Attributes <u>att.written</u> (@hand) <u>att.typed</u> (type, @subtype)</p> <p><b>type</b> classifies the reading according to some useful typology.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p>

	<p><b>Sample values include:</b> <b>sub-</b> <b>stan-</b>(substantive) the reading offers a substantive variant.</p> <p><b>or-</b> <b>tho-</b> (orthographic) the reading differs only orthographically, not in substance, from other readings.</p> <p>cause classifies the cause for the variant reading, according to any appropriate typology of possible origins.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Sample values include:</b> <b>homeoteleu-</b> <b>ton</b> <b>homeoarchy</b> <b>pa-</b> <b>le-</b> <b>o-</b> <b>graph-</b> <b>ic-</b> <b>Confu-</b> <b>sion</b> <b>hap-</b> <b>log-</b> <b>ra-</b> <b>phy</b> <b>dit-</b> <b>tog-</b> <b>ra-</b> <b>phy</b> <b>falseEmen-</b> <b>da-</b> <b>tion</b></p> <p>varSeq (variant sequence) provides a number indicating the position of this reading in a sequence, when there is reason to presume a sequence to the variants.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.count</u></p> <p><b>Note</b> Different variant sequences could be coded with distinct number trails: 1-2-3 for one sequence, 5-6-7 for another. More complex variant sequences, with (for example) multiple branchings from single readings, may be expressed through the &lt;join&gt; element.</p> <p>require points to other readings that are required when adopting the current reading or lemma.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p>
<b>Note</b>	This element class defines attributes inherited by <rdg>, <lem>, and <rdgGrp>.

### 9.3.46. att.timed

**att.timed** provides attributes common to those elements which have a duration in time, expressed either absolutely or by reference to an alignment map. [8.3.5. Temporal Information]

**Module** tei

<b>Members</b>	<u>gap</u>
<b>Attributes</b>	<p>Attributes</p> <p><b>start</b> indicates the location within a temporal alignment at which this element begins.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.pointer</u></p> <p><b>Note</b> If no value is supplied, the element is assumed to follow the immediately preceding element at the same hierarchic level.</p> <p><b>end</b> indicates the location within a temporal alignment at which this element ends.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.pointer</u></p> <p><b>Note</b> If no value is supplied, the element is assumed to precede the immediately following element at the same hierarchic level.</p>

### 9.3.47. *att.transcriptional*

<b>att.transcriptional</b> provides attributes specific to elements encoding authorial or scribal intervention in a text when transcribing manuscript or similar sources. [11.3.1.4. Additions and Deletions]	
<b>Module</b>	tei
<b>Members</b>	<u>add</u> <u>del</u> <u>restore</u> <u>subst</u>
<b>Attributes</b>	<p>Attributes <u>att.editLike</u> (@evidence, @instant) <u>att.written</u> (@hand)</p> <p><b>status</b> indicates the effect of the intervention, for example in the case of a deletion, strikeouts which include too much or too little text, or in the case of an addition, an insertion which duplicates some of the text already present.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.enumerated</u></p> <p><b>Sample values include:</b></p> <p><b>duplicate</b> all of the text indicated as an addition duplicates some text that is in the original, whether the duplication is word-for-word or less exact.</p> <p><b>duplicate-part</b> part of the text indicated as an addition duplicates some text that is in the original</p> <p><b>excess</b> Some text at the beginning of the deletion is marked as deleted even though it clearly should not be deleted.</p> <p><b>excess-end</b> Some text at the end of the deletion is marked as deleted even though it clearly should not be deleted.</p> <p><b>short-tart</b> some text at the beginning of the deletion is not marked as deleted even though it clearly should be.</p> <p><b>short-End</b> some text at the end of the deletion is not marked as deleted even though it clearly should be.</p>

		<p><b>partial</b> some text in the deletion is not marked as deleted even though it clearly should be.</p> <p><b>unre-markable</b> the deletion is not faulty.[Default]</p> <p><b>Note</b> Status information on each deletion is needed rather rarely except in critical editions from authorial manuscripts; status information on additions is even less common. Marking a deletion or addition as faulty is inescapably an interpretive act; the usual test applied in practice is the linguistic acceptability of the text with and without the letters or words in question.</p>
cause	documents the presumed cause for the intervention.	<p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.enumerated</a></p>
seq	(sequence) assigns a sequence number related to the order in which the encoded features carrying this attribute are believed to have occurred.	<p><b>Status</b> Optional</p> <p><b>Datatype</b> <a href="#">teidata.count</a></p>

### 9.3.48. att.typed

**att.typed** provides attributes that can be used to classify or subclassify elements in any way. [1.3.1. Attribute Classes 17.1.1. Words and Above 3.6.1. Referring Strings 3.7. Simple Links and Cross-References 3.6.5. Abbreviations and Their Expansions 3.13.1. Core Tags for Verse 7.2.5. Speech Contents 4.1.1. Un-numbered Divisions 4.1.2. Numbered Divisions 4.2.1. Headings and Trailers 4.4. Virtual Divisions 13.3.2.3. Personal Relationships 11.3.1.1. Core Elements for Transcriptional Work 16.1.1. Pointers and Links 16.3. Blocks, Segments, and Anchors 12.2. Linking the Apparatus to the Text 22.5.1.2. Defining Content Models: RELAX NG 8.3. Elements Unique to Spoken Texts 23.3.1.3. Modification of Attribute and Attribute Value Lists]

<b>Module</b>	tei
<b>Members</b>	<a href="#">att.interpLike</a> [ <a href="#">interp</a> <a href="#">interpGrp</a> <a href="#">span</a> <a href="#">spanGrp</a> ] <a href="#">TEI</a> <a href="#">ab</a> <a href="#">accMat</a> <a href="#">add</a> <a href="#">app</a> <a href="#">c</a> <a href="#">change</a> <a href="#">cl</a> <a href="#">correspAction</a> <a href="#">correspDesc</a> <a href="#">country</a> <a href="#">date</a> <a href="#">del</a> <a href="#">div</a> <a href="#">idno</a> <a href="#">lb</a> <a href="#">listOrg</a> <a href="#">listPerson</a> <a href="#">m</a> <a href="#">name</a> <a href="#">note</a> <a href="#">noteGrp</a> <a href="#">org</a> <a href="#">orgName</a> <a href="#">pb</a> <a href="#">pc</a> <a href="#">persName</a> <a href="#">phr</a> <a href="#">ptr</a> <a href="#">quote</a> <a href="#">ref</a> <a href="#">restore</a> <a href="#">roleName</a> <a href="#">rs</a> <a href="#">s</a> <a href="#">seg</a> <a href="#">settlement</a> <a href="#">stamp</a> <a href="#">surface</a> <a href="#">surfaceGrp</a> <a href="#">term</a> <a href="#">text</a> <a href="#">title</a> <a href="#">w</a>
<b>Attributes</b>	<p>Attributes</p> <p><b>type</b> characterizes the element in some sense, using any convenient classification scheme or typology. <b>Status</b> Optional <b>Datatype</b> <a href="#">teidata.enumerated</a></p> <pre>&lt;div type="verse"&gt;   &lt;head&gt;Night in Tarras&lt;/head&gt;   &lt;lg type="stanza"&gt;     &lt;l&gt;At evening tramping on the hot white road&lt;/l&gt;     &lt;l&gt;...&lt;/l&gt;   &lt;/lg&gt;   &lt;lg type="stanza"&gt;     &lt;l&gt;A wind sprang up from nowhere as the sky&lt;/l&gt;     &lt;l&gt;...&lt;/l&gt;   &lt;/lg&gt; &lt;/div&gt;</pre> <p><b>Note</b> The <i>type</i> attribute is present on a number of elements, not all of which are members of <b>att.typed</b>, usually because these elements restrict the possible values for the attribute in a specific way.</p> <p><b>subtype</b> (subtype) provides a sub-categorization of the element, if needed <b>Status</b> Optional</p>

	<b>Datatype</b> <u>teidata.enumerated</u> <b>Note</b> The <i>subtype</i> attribute may be used to provide any sub-classification for the element additional to that provided by its <i>type</i> attribute.
<b>Schematron</b>	<sch:rule context="tei:*[@subtype]"> <sch:assert test="@type">The <sch:name/> element should not be categorized in detail with @subtype unless also categorized in general with @type</sch:assert> </sch:rule>
<b>Note</b>	When appropriate, values from an established typology should be used. Alternatively a typology may be defined in the associated TEI header. If values are to be taken from a project-specific list, this should be defined using the <valList> element in the project-specific schema description, as described in 23.3.1.3. Modification of Attribute and Attribute Value Lists .

### 9.3.49. att.witnessed

<b>att.witnessed</b> provides attributes used to identify the witnesses supporting a particular reading in a critical apparatus. [12.1. The Apparatus Entry, Readings, and Witnesses]	
<b>Module</b>	textcrit
<b>Members</b>	<u>lem</u> <u>rdg</u>
<b>Attributes</b>	<p>Attributes</p> <p><b>wit</b> (witness or witnesses) contains a space-delimited list of one or more pointers indicating the witnesses which attest to a given reading.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> 1–# occurrences of <u>teidata.pointer</u> separated by white-space</p> <p><b>Note</b> If the apparatus contains readings only for a single witness, this attribute may be consistently omitted. This attribute may occur both within an apparatus gathering variant readings in the transcription of an individual witness and within an apparatus gathering readings from different witnesses. Additional descriptions or alternative versions of the sigla referenced may be supplied as the content of a child &lt;wit&gt; element.</p>

### 9.3.50. att.written

<b>att.written</b> provides attributes to indicate the hand in which the content of an element was written in the source being transcribed. [1.3.1. Attribute Classes]	
<b>Module</b>	tei
<b>Members</b>	<u>att.textCritical</u> [ <u>lem</u> <u>rdg</u> ] <u>att.transcriptional</u> [ <u>add</u> <u>del</u> <u>restore</u> <u>subst</u> ] <u>ab</u> <u>div</u> <u>hi</u> <u>note</u> <u>noteGrp</u> <u>p</u> <u>seg</u> <u>text</u>
<b>Attributes</b>	<p>Attributes</p> <p><b>hand</b> points to a &lt;handNote&gt; element describing the hand considered responsible for the content of the element concerned.</p> <p><b>Status</b> Optional</p> <p><b>Datatype</b> <u>teidata.pointer</u></p>

## 9.4. Macros

### 9.4.1. macro.paraContent

<b>macro.paraContent</b> (paragraph content) defines the content of paragraphs and similar elements. [1.3. The TEI Class System]	
<b>Module</b>	tei
<b>Used by</b>	<u>ab</u> <u>add</u> <u>del</u> <u>hi</u> <u>p</u> <u>ref</u> <u>restore</u> <u>seg</u> <u>title</u>
<b>Content model</b>	<content>

	<pre> &lt;alternate minOccurs="0" maxOccurs="unbounded"&gt;   &lt;textNode/&gt;   &lt;classRef key="model.gLike"/&gt;   &lt;classRef key="model.phrase"/&gt;   &lt;classRef key="model.inter"/&gt;   &lt;classRef key="model.global"/&gt;   &lt;elementRef key="lg"/&gt;   &lt;classRef key="model.lLike"/&gt; &lt;/alternate&gt; &lt;/content&gt; </pre>
<b>Declaration</b>	<pre> macro.paraContent = (   text     model.gLike     model.phrase     model.inter     model.global     lg     model.lLike )* </pre>

#### 9.4.2. *macro.phraseSeq*

<b>macro.phraseSeq</b> (phrase sequence) defines a sequence of character data and phrase-level elements. [1.4.1. Standard Content Models]	
<b>Module</b>	tei
<b>Used by</b>	<u>cl</u> <u>country</u> <u>editor</u> <u>name</u> <u>objectType</u> <u>orgName</u> <u>persName</u> <u>phr</u> <u>pubPlace</u> <u>publisher</u> <u>roleName</u> <u>rs</u> <u>s</u> <u>settlement</u> <u>stamp</u> <u>street</u> <u>term</u>
<b>Content model</b>	<pre> &lt;content&gt; &lt;alternate minOccurs="0" maxOccurs="unbounded"&gt;   &lt;textNode/&gt;   &lt;classRef key="model.gLike"/&gt;   &lt;classRef key="model.attributable"/&gt;   &lt;classRef key="model.phrase"/&gt;   &lt;classRef key="model.global"/&gt; &lt;/alternate&gt; &lt;/content&gt; </pre>
<b>Declaration</b>	<pre> macro.phraseSeq = ( text   model.gLike   model.attributable   model.phrase   model.global ) * </pre>

#### 9.4.3. *macro.phraseSeq.limited*

<b>macro.phraseSeq.limited</b> (limited phrase sequence) defines a sequence of character data and those phrase-level elements that are not typically used for transcribing extant documents. [1.4.1. Standard Content Models]	
<b>Module</b>	tei
<b>Used by</b>	<u>classCode</u> <u>language</u> <u>span</u>
<b>Content model</b>	<pre> &lt;content&gt; &lt;alternate minOccurs="0" maxOccurs="unbounded"&gt;   &lt;textNode/&gt;   &lt;classRef key="model.limitedPhrase"/&gt;   &lt;classRef key="model.global"/&gt; &lt;/alternate&gt; &lt;/content&gt; </pre>
<b>Declaration</b>	<pre> macro.phraseSeq.limited = ( text   model.limitedPhrase   model.global ) * </pre>

#### 9.4.4. *macro.specialPara*

<b>macro.specialPara</b> ('special' paragraph content) defines the content model of elements such as notes or list items, which either contain a series of component-level elements or else have the same structure as a paragraph, containing a series of phrase-level and inter-level elements. [1.3. The TEI Class System]	
<b>Module</b>	tei
<b>Used by</b>	<u>accMat</u> <u>change</u> <u>handNote</u> <u>licence</u> <u>metamark</u> <u>note</u> <u>q</u> <u>quote</u>
<b>Content model</b>	<pre> &lt;content&gt; </pre>

	<pre> &lt;alternate minOccurs="0" maxOccurs="unbounded"&gt;   &lt;textNode/&gt;   &lt;classRef key="model.gLike"/&gt;   &lt;classRef key="model.phrase"/&gt;   &lt;classRef key="model.inter"/&gt;   &lt;classRef key="model.divPart"/&gt;   &lt;classRef key="model.global"/&gt; &lt;/alternate&gt; &lt;/content&gt; </pre>
<b>Declaration</b>	<pre> macro.specialPara = (   text     model.gLike     model.phrase     model.inter     model.divPart     model.global )* </pre>

### 9.4.5. *macro.xtext*

<b>macro.xtext</b> (extended text) defines a sequence of character data and gaiji elements.	
<b>Module</b>	tei
<b>Used by</b>	<u>c</u>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;alternate minOccurs="0" maxOccurs="unbounded"&gt;     &lt;textNode/&gt;     &lt;classRef key="model.gLike"/&gt;   &lt;/alternate&gt; &lt;/content&gt; </pre>
<b>Declaration</b>	<pre> macro.xtext = ( text   model.gLike ) * </pre>

## 9.5. Datatypes

### 9.5.1. *teidata.certainty*

<b>teidata.certainty</b> defines the range of attribute values expressing a degree of certainty.	
<b>Module</b>	tei
<b>Used by</b>	teidata.probCert
<b>Content model</b>	<pre> &lt;content&gt;   &lt;valList type="closed"&gt;     &lt;valItem ident="high"/&gt;     &lt;valItem ident="medium"/&gt;     &lt;valItem ident="low"/&gt;     &lt;valItem ident="unknown"/&gt;   &lt;/valList&gt; &lt;/content&gt; </pre>
<b>Declaration</b>	<pre> teidata.certainty = "high"   "medium"   "low"   "unknown" </pre>
<b>Note</b>	Certainty may be expressed by one of the predefined symbolic values high, medium, or low. The value unknown should be used in cases where the encoder does not wish to assert an opinion about the matter.

### 9.5.2. *teidata.count*

<b>teidata.count</b> defines the range of attribute values used for a non-negative integer value used as a count.	
<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre> &lt;content&gt;   &lt;dataRef name="nonNegativeInteger"/&gt; &lt;/content&gt; </pre>
<b>Declaration</b>	<pre> teidata.count = xsd:nonNegativeInteger </pre>

Note	Any positive integer value or zero is permitted
------	---

### 9.5.3. *teidata.duration.iso*

<b>teidata.duration.iso</b> defines the range of attribute values available for representation of a duration in time using ISO 8601 standard formats	
Module	tei
Used by	
Content model	<pre>&lt;content&gt;   &lt;dataRef name="token"     restriction="[0-9.,DHMPRSTWYZ/:\-]+" /&gt; &lt;/content&gt;</pre>
Declaration	<pre>teidata.duration.iso = token { pattern = "[0-9.,DHMPRSTWYZ/:\-]+" }</pre>
Example	<pre>&lt;time dur-iso="PT0,75H"&gt;three-quarters of an hour&lt;/time&gt;</pre>
Example	<pre>&lt;date dur-iso="P1,5D"&gt;a day and a half&lt;/date&gt;</pre>
Example	<pre>&lt;date dur-iso="P14D"&gt;a fortnight&lt;/date&gt;</pre>
Example	<pre>&lt;time dur-iso="PT0.02S"&gt;20 ms&lt;/time&gt;</pre>
Note	<p>A duration is expressed as a sequence of number-letter pairs, preceded by the letter P; the letter gives the unit and may be Y (year), M (month), D (day), H (hour), M (minute), or S (second), in that order. The numbers are all unsigned integers, except for the last, which may have a decimal component (using either . or , as the decimal point; the latter is preferred). If any number is 0, then that number-letter pair may be omitted. If any of the H (hour), M (minute), or S (second) number-letter pairs are present, then the separator T must precede the first 'time' number-letter pair.</p> <p>For complete details, see ISO 8601 <i>Data elements and interchange formats — Information interchange — Representation of dates and times</i>.</p>

### 9.5.4. *teidata.duration.w3c*

<b>teidata.duration.w3c</b> defines the range of attribute values available for representation of a duration in time using W3C datatypes.	
Module	tei
Used by	
Content model	<pre>&lt;content&gt;   &lt;dataRef name="duration"/&gt; &lt;/content&gt;</pre>
Declaration	<pre>teidata.duration.w3c = xsd:duration</pre>
Example	<pre>&lt;time dur="PT45M"&gt;forty-five minutes&lt;/time&gt;</pre>
Example	<pre>&lt;date dur="P1DT12H"&gt;a day and a half&lt;/date&gt;</pre>
Example	<pre>&lt;date dur="P7D"&gt;a week&lt;/date&gt;</pre>
Example	<pre>&lt;time dur="PT0.02S"&gt;20 ms&lt;/time&gt;</pre>
Note	<p>A duration is expressed as a sequence of number-letter pairs, preceded by the letter P; the letter gives the unit and may be Y (year), M (month), D (day), H (hour), M (minute), or S (second), in that order. The numbers are all unsigned integers, except for the S number, which may have a decimal component (using . as the decimal point). If any number is 0, then that number-letter pair may be omitted. If any of the H (hour), M (minute), or S (second) number-letter pairs are present, then the separator T must precede the first 'time' number-letter pair.</p> <p>For complete details, see the W3C specification.</p>

### 9.5.5. *teidata.enumerated*

<b>teidata.enumerated</b> defines the range of attribute values expressed as a single XML name taken from a list of documented possibilities.	
Module	tei

Used by	Element: <ul style="list-style-type: none"> <li>• <code>app/@type</code></li> <li>• <code>availability/@status</code></li> <li>• <code>correspAction/@type</code></li> <li>• <code>gap/@reason</code></li> <li>• <code>gap/@agent</code></li> <li>• <code>idno/@type</code></li> <li>• <code>interp/@type</code></li> <li>• <code>interpGrp/@type</code></li> <li>• <code>org/@role</code></li> <li>• <code>pc/@force</code></li> <li>• <code>pc/@unit</code></li> <li>• <code>person/@role</code></li> <li>• <code>person/@age</code></li> <li>• <code>q/@type</code></li> <li>• <code>span/@type</code></li> <li>• <code>spanGrp/@type</code></li> <li>• <code>surface/@attachment</code></li> <li>• <code>title/@type</code></li> <li>• <code>title/@level</code></li> <li>• <code>variantEncoding/@method</code></li> <li>• <code>variantEncoding/@location</code></li> </ul>
Content model	<pre>&lt;content&gt; &lt;dataRef key="teidata.word"/&gt; &lt;/content&gt;</pre>
Declaration	<pre>teidata.enumerated = teidata.word</pre>
Note	<p>Attributes using this datatype must contain a single 'word' which contains only letters, digits, punctuation characters, or symbols: thus it cannot include whitespace.</p> <p>Typically, the list of documented possibilities will be provided (or exemplified) by a value list in the associated attribute specification, expressed with a <code>&lt;valList&gt;</code> element.</p>

### 9.5.6. *teidata.language*

<b>teidata.language</b> defines the range of attribute values used to identify a particular combination of human language and writing system. [6.1. Language Identification]	
Module	tei
Used by	Element: <ul style="list-style-type: none"> <li>• <code>language/@ident</code></li> </ul>
Content model	<pre>&lt;content&gt; &lt;alternate&gt;   &lt;dataRef name="language"/&gt;   &lt;valList&gt;     &lt;valItem ident=""/&gt;   &lt;/valList&gt; &lt;/alternate&gt; &lt;/content&gt;</pre>
Declaration	<pre>teidata.language = xsd:language   ( "" )</pre>
Note	<p>The values for this attribute are language 'tags' as defined in BCP 47. Currently BCP 47 comprises RFC 5646 and RFC 4647; over time, other IETF documents may succeed these as the best current practice.</p>

A ‘language tag’, per BCP 47, is assembled from a sequence of components or *subtags* separated by the hyphen character (-, U+002D). The tag is made of the following subtags, in the following order. Every subtag except the first is optional. If present, each occurs only once, except the fourth and fifth components (variant and extension), which are repeatable.

**language**

The IANA-registered code for the language. This is almost always the same as the ISO 639 2-letter language code if there is one. The list of available registered language subtags can be found at <http://www.iana.org/assignments/language-subtag-registry>. It is recommended that this code be written in lower case.

**script**

The ISO 15924 code for the script. These codes consist of 4 letters, and it is recommended they be written with an initial capital, the other three letters in lower case. The canonical list of codes is maintained by the Unicode Consortium, and is available at <http://unicode.org/iso15924/iso15924-codes.html>. The IETF recommends this code be omitted unless it is necessary to make a distinction you need.

**region**

Either an ISO 3166 country code or a UN M.49 region code that is registered with IANA (not all such codes are registered, e.g. UN codes for economic groupings or codes for countries for which there is already an ISO 3166 2-letter code are not registered). The former consist of 2 letters, and it is recommended they be written in upper case; the list of codes can be searched or browsed at <https://www.iso.org/obp/ui/#search/code/>. The latter consist of 3 digits; the list of codes can be found at <http://unstats.un.org/unsd/methods/m49/m49.htm>.

**variant**

An IANA-registered variation. These codes are used to indicate additional, well-recognized variations that define a language or its dialects that are not covered by other available subtags.

**extension**

An extension has the format of a single letter followed by a hyphen followed by additional subtags. These exist to allow for future extension to BCP 47, but as of this writing no such extensions are in use.

**private use**

An extension that uses the initial subtag of the single letter *x* (i.e., starts with *x-*) has no meaning except as negotiated among the parties involved. These should be used with great care, since they interfere with the interoperability that use of RFC 4646 is intended to promote. In order for a document that makes use of these subtags to be TEI-conformant, a corresponding `<language>` element must be present in the TEI header.

There are two exceptions to the above format. First, there are language tags in the IANA registry that do not match the above syntax, but are present because they have been ‘grandfathered’ from previous specifications.

Second, an entire language tag can consist of only a private use subtag. These tags start with *x-*, and do not need to follow any further rules established by the IETF and endorsed by these Guidelines. Like all language tags that make use of private use subtags, the language in question must be documented in a corresponding `<language>` element in the TEI header.

Examples include

**sn**

Shona

**zh-TW**

Taiwanese

**zh-Hant-HK**

Chinese written in traditional script as used in Hong Kong

**en-SL**

English as spoken in Sierra Leone

**pl**

Polish

**es-MX**

Spanish as spoken in Mexico

**es-419**

Spanish as spoken in Latin America

The W3C Internationalization Activity has published a useful introduction to BCP 47, Language tags in HTML and XML.

### 9.5.7. *teidata.name*

<b>teidata.name</b> defines the range of attribute values expressed as an XML Name.	
<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre>&lt;content&gt;   &lt;dataRef name="Name" /&gt; &lt;/content&gt;</pre>
<b>Declaration</b>	<pre>teidata.name = xsd:Name</pre>
<b>Note</b>	Attributes using this datatype must contain a single word which follows the rules defining a legal XML name (see <a href="http://www.w3.org/TR/REC-xml/#dt-name">http://www.w3.org/TR/REC-xml/#dt-name</a> ); for example they cannot include whitespace or begin with digits.

### 9.5.8. *teidata.numeric*

<b>teidata.numeric</b> defines the range of attribute values used for numeric values.	
<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre>&lt;content&gt;   &lt;alternate&gt;     &lt;dataRef name="double" /&gt;     &lt;dataRef name="token"       restriction="(\-?[\\d]+/\-?[\\d]+)" /&gt;     &lt;dataRef name="decimal" /&gt;   &lt;/alternate&gt; &lt;/content&gt;</pre>
<b>Declaration</b>	<pre>teidata.numeric =   xsd:double   token { pattern = "(\\-?[\\d]+/\-?[\\d]+)" }   xsd:decimal</pre>
<b>Note</b>	<p>Any numeric value, represented as a decimal number, in floating point format, or as a ratio.</p> <p>To represent a floating point number, expressed in scientific notation, 'E notation', a variant of 'exponential notation', may be used. In this format, the value is expressed as two numbers separated by the letter E. The first number, the significand (sometimes called the mantissa) is given in decimal format, while the second is an integer. The value is obtained by multiplying the mantissa by 10 the number of times indicated by the integer. Thus the value represented in decimal notation as 1000.0 might be represented in scientific notation as 10E3.</p> <p>A value expressed as a ratio is represented by two integer values separated by a solidus (/) character. Thus, the value represented in decimal notation as 0.5 might be represented as a ratio by the string 1/2.</p>

### 9.5.9. *teidata.outputMeasurement*

<b>teidata.outputMeasurement</b> defines a range of values for use in specifying the size of an object that is intended for display.	
<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre>&lt;content&gt;   &lt;dataRef name="token"     restriction="([\\-+]?\\d+(\\.\\d+)?(% cm mm in pt pc px em ex gd rem vw vh vm)" /&gt; &lt;/content&gt;</pre>
<b>Declaration</b>	<pre>teidata.outputMeasurement =   token   {     pattern = "[\\-+]?\\d+(\\.\\d+)?(% cm mm in pt pc px em ex gd rem vw vh vm)"   }</pre>
<b>Example</b>	<pre>&lt;figure&gt;   &lt;head&gt;The TEI Logo&lt;/head&gt;   &lt;figDesc&gt;Stylized yellow angle brackets with the letters &lt;mentioned&gt;TEI&lt;/mentioned&gt; in</pre>

	<pre>         between and &lt;mentioned&gt;text encoding initiative&lt;/mentioned&gt; underneath, all on a white         background.&lt;/figDesc&gt;         &lt;graphic height="600px" width="600px"         url="http://www.tei-c.org/logos/TEI-600.jpg"/&gt;       &lt;/figure&gt; </pre>
<b>Note</b>	These values map directly onto the values used by XSL-FO and CSS. For definitions of the units see those specifications; at the time of this writing the most complete list is in the CSS3 working draft.

### 9.5.10. *teidata.pattern*

<b>teidata.pattern</b> defines attribute values which are expressed as a regular expression.	
<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre> &lt;content&gt;   &lt;dataRef name="token"/&gt; &lt;/content&gt; </pre>
<b>Declaration</b>	<pre> teidata.pattern = token </pre>
<b>Note</b>	<p>A regular expression, often called a <i>pattern</i>, is an expression that describes a set of strings. They are usually used to give a concise description of a set, without having to list all elements. For example, the set containing the three strings <i>Handel</i>, <i>Händel</i>, and <i>Haendel</i> can be described by the pattern <code>H(ä ae?)ndel</code> (or alternatively, it is said that the pattern <code>H(ä ae?)ndel</code> <i>matches</i> each of the three strings)</p> <p>Wikipedia        This TEI datatype is mapped to the XSD token datatype, and may therefore contain any string of characters. However, it is recommended that the value used conform to the particular flavour of regular expression syntax supported by XSD Schema.</p>

### 9.5.11. *teidata.point*

<b>teidata.point</b> defines the data type used to express a point in cartesian space.	
<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre> &lt;content&gt;   &lt;dataRef name="token"     restriction="(-?[0-9]+(\.[0-9]+)?,-?[0-9]+(\.[0-9]+)?)" /&gt; &lt;/content&gt; </pre>
<b>Declaration</b>	<pre> teidata.point = token { pattern = "(-?[0-9]+(\.[0-9]+)?,-?[0-9]+(\.[0-9]+)?)" } </pre>
<b>Example</b>	<pre> &lt;facsimile&gt;   &lt;surface ulx="0" uly="0" lrx="400" lry="280"&gt;     &lt;zone points="220,100 300,210 170,250 123,234"&gt;       &lt;graphic url="handwriting.png" /&gt;     &lt;/zone&gt;   &lt;/surface&gt; &lt;/facsimile&gt; </pre>
<b>Note</b>	A point is defined by two numeric values, which should be expressed as decimal numbers. Neither number can end in a decimal point. E.g., both 0.0,84.2 and 0,84 are allowed, but 0.,84. is not.

### 9.5.12. *teidata.pointer*

<b>teidata.pointer</b> defines the range of attribute values used to provide a single URI, absolute or relative, pointing to some other resource, either within the current document or elsewhere.	
<b>Module</b>	tei
<b>Used by</b>	<p>Element:</p> <ul style="list-style-type: none"> <li>• <code>app/@from</code></li> <li>• <code>app/@to</code></li> <li>• <code>change/@target</code></li> <li>• <code>classCode/@scheme</code></li> </ul>

	<ul style="list-style-type: none"> <li>• <u>keywords</u>/<u>@scheme</u></li> <li>• <u>metamark</u>/<u>@target</u></li> <li>• <u>span</u>/<u>@from</u></li> <li>• <u>span</u>/<u>@to</u></li> </ul>
<b>Content model</b>	<pre>&lt;content&gt;   &lt;dataRef name="anyURI" /&gt; &lt;/content&gt;</pre>
<b>Declaration</b>	<pre>teidata.pointer = xsd:anyURI</pre>
<b>Note</b>	<p>The range of syntactically valid values is defined by RFC 3986 <i>Uniform Resource Identifier (URI): Generic Syntax</i>. Note that the values themselves are encoded using RFC 3987 <i>Internationalized Resource Identifiers (IRIs) mapping to URIs</i>. For example, <code>https://secure.wikimedia.org/wikipedia/en/wiki/%</code> is encoded as <code>https://secure.wikimedia.org/wikipedia/en/wiki/%25</code> while <code>http://-mr---nx.mirbg4--n###.#####-#####.####/</code> is encoded as <code>http://ckbbajlc6dj7bxne2c.xn--wgbh1c/</code></p>

### 9.5.13. *teidata.probCert*

<b>teidata.probCert</b> defines a range of attribute values which can be expressed either as a numeric probability or as a coded certainty value.	
<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre>&lt;content&gt;   &lt;alternate&gt;     &lt;dataRef key="teidata.probability"/&gt;     &lt;dataRef key="teidata.certainty"/&gt;   &lt;/alternate&gt; &lt;/content&gt;</pre>
<b>Declaration</b>	<pre>teidata.probCert = teidata.probability   teidata.certainty</pre>

### 9.5.14. *teidata.probability*

<b>teidata.probability</b> defines the range of attribute values expressing a probability.	
<b>Module</b>	tei
<b>Used by</b>	<u>teidata.probCert</u>
<b>Content model</b>	<pre>&lt;content&gt;   &lt;dataRef name="double"/&gt; &lt;/content&gt;</pre>
<b>Declaration</b>	<pre>teidata.probability = xsd:double</pre>
<b>Note</b>	<p>Probability is expressed as a real number between 0 and 1; 0 representing <i>certainly false</i> and 1 representing <i>certainly true</i>.</p>

### 9.5.15. *teidata.replacement*

<b>teidata.replacement</b> defines attribute values which contain a replacement template.	
<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre>&lt;content&gt;   &lt;textNode/&gt; &lt;/content&gt;</pre>
<b>Declaration</b>	<pre>teidata.replacement = text</pre>

### 9.5.16. *teidata.sex*

<b>teidata.sex</b> defines the range of attribute values used to identify human or animal sex.
--

<b>Module</b>	tei
<b>Used by</b>	Element: <ul style="list-style-type: none"> <li>• <code>person/@sex</code></li> </ul>
<b>Content model</b>	<pre>&lt;content&gt;   &lt;dataRef key="teidata.word"/&gt; &lt;/content&gt;</pre>
<b>Declaration</b>	<pre>teidata.sex = teidata.word</pre>
<b>Note</b>	Values for attributes using this datatype may be locally defined by a project, or may refer to an external standard, such as vCard's sex property <a href="http://microformats.org/wiki/gender-formats">http://microformats.org/wiki/gender-formats</a> (in which M indicates male, F female, O other, N none or not applicable, U unknown), or the often used ISO 5218:2004 <i>Representation of Human Sexes</i> <a href="http://standards.iso.org/itf/PubliclyAvailableStandards/c036266_ISO_IEC_5218_2004(E_F).zip">http://standards.iso.org/itf/PubliclyAvailableStandards/c036266_ISO_IEC_5218_2004(E_F).zip</a> (in which 0 indicates unknown; 1 male; 2 female; and 9 not applicable, although the ISO standard is widely considered inadequate); cf. CETH's <i>Recommendations for Inclusive Data Collection of Trans People</i> <a href="http://transhealth.ucsf.edu/trans?page=lib-data-collection">http://transhealth.ucsf.edu/trans?page=lib-data-collection</a> .

### 9.5.17. *teidata.temporal.iso*

**teidata.temporal.iso** defines the range of attribute values expressing a temporal expression such as a date, a time, or a combination of them, that conform to the international standard *Data elements and interchange formats – Information interchange – Representation of dates and times*.

<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre>&lt;content&gt;   &lt;alternate&gt;     &lt;dataRef name="date"/&gt;     &lt;dataRef name="gYear"/&gt;     &lt;dataRef name="gMonth"/&gt;     &lt;dataRef name="gDay"/&gt;     &lt;dataRef name="gYearMonth"/&gt;     &lt;dataRef name="gMonthDay"/&gt;     &lt;dataRef name="time"/&gt;     &lt;dataRef name="dateTime"/&gt;     &lt;dataRef name="token"       restriction="[0-9.,DHMPRSTWYZ/:\-]+"/&gt;   &lt;/alternate&gt; &lt;/content&gt;</pre>
<b>Declaration</b>	<pre>teidata.temporal.iso =   xsd:date   xsd:gYear   xsd:gMonth   xsd:gDay   xsd:gYearMonth   xsd:gMonthDay   xsd:time   xsd:dateTime   token { pattern = "[0-9.,DHMPRSTWYZ/:\-]+" }</pre>
<b>Note</b>	<p>If it is likely that the value used is to be compared with another, then a time zone indicator should always be included, and only the <code>dateTime</code> representation should be used.</p> <p>For all representations for which ISO 8601 describes both a <i>basic</i> and an <i>extended</i> format, these Guidelines recommend use of the extended format.</p> <p>While ISO 8601 permits the use of both <code>00:00</code> and <code>24:00</code> to represent midnight, these Guidelines strongly recommend against the use of <code>24:00</code>.</p>

### 9.5.18. *teidata.temporal.w3c*

**teidata.temporal.w3c** defines the range of attribute values expressing a temporal expression such as a date, a time, or a combination of them, that conform to the W3C *XML Schema Part 2: Datatypes Second Edition* specification.

<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre>&lt;content&gt;   &lt;alternate&gt;     &lt;dataRef name="date"/&gt;     &lt;dataRef name="gYear"/&gt;</pre>

	<pre> &lt;dataRef name="gMonth" /&gt; &lt;dataRef name="gDay" /&gt; &lt;dataRef name="gYearMonth" /&gt; &lt;dataRef name="gMonthDay" /&gt; &lt;dataRef name="time" /&gt; &lt;dataRef name="dateTime" /&gt; &lt;/alternate&gt; &lt;/content&gt; </pre>
<b>Declaration</b>	<pre> teidata.temporal.w3c =   xsd:date     xsd:gYear     xsd:gMonth     xsd:gDay     xsd:gYearMonth     xsd:gMonthDay     xsd:time     xsd:dateTime </pre>
<b>Note</b>	If it is likely that the value used is to be compared with another, then a time zone indicator should always be included, and only the dateTime representation should be used.

### 9.5.19. *teidata.text*

<b>teidata.text</b> defines the range of attribute values used to express some kind of identifying string as a single sequence of Unicode characters possibly including whitespace.	
<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre> &lt;content&gt;   &lt;dataRef name="string" /&gt; &lt;/content&gt; </pre>
<b>Declaration</b>	<pre> teidata.text = string </pre>
<b>Note</b>	Attributes using this datatype must contain a single 'token' in which whitespace and other punctuation characters are permitted.

### 9.5.20. *teidata.truthValue*

<b>teidata.truthValue</b> defines the range of attribute values used to express a truth value.	
<b>Module</b>	tei
<b>Used by</b>	Element: <ul style="list-style-type: none"> <li>• <u>pc</u>/@pre</li> <li>• <u>surface</u>/@flipping</li> </ul>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;dataRef name="boolean" /&gt; &lt;/content&gt; </pre>
<b>Declaration</b>	<pre> teidata.truthValue = xsd:boolean </pre>
<b>Note</b>	The possible values of this datatype are 1 or true, or 0 or false. This datatype applies only for cases where uncertainty is inappropriate; if the attribute concerned may have a value other than true or false, e.g. unknown, or inapplicable, it should have the extended version of this datatype: <b>teidata.xTruthValue</b> .

### 9.5.21. *teidata.version*

<b>teidata.version</b> defines the range of attribute values which may be used to specify a TEI or Unicode version number.	
<b>Module</b>	tei
<b>Used by</b>	Element: <ul style="list-style-type: none"> <li>• <u>TEI</u>/@version</li> </ul>
<b>Content model</b>	<pre> &lt;content&gt;   &lt;dataRef name="token"     restriction="[\\d]+(\\. [\\d]+){0,2}" /&gt; &lt;/content&gt; </pre>

<b>Declaration</b>	<pre>teidata.version = token { pattern = "[\d]+(\.[\d]+){0,2}" }</pre>
<b>Note</b>	The value of this attribute follows the pattern specified by the Unicode consortium for its version number ( <a href="http://unicode.org/versions/">http://unicode.org/versions/</a> ). A version number contains digits and fullstop characters only. The first number supplied identifies the major version number. A second and third number, for minor and sub-minor version numbers, may also be supplied.

### 9.5.22. *teidata.versionNumber*

<b>teidata.versionNumber</b> defines the range of attribute values used for version numbers.	
<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre>&lt;content&gt; &lt;dataRef name="token" restriction="[\d]+[a-z]*[\d]*(\.[\d]+[a-z]*[\d]*){0,3}" /&gt; &lt;/content&gt;</pre>
<b>Declaration</b>	<pre>teidata.versionNumber = token { pattern = "[\d]+[a-z]*[\d]*(\.[\d]+[a-z]*[\d]*){0,3}" }</pre>

### 9.5.23. *teidata.word*

<b>teidata.word</b> defines the range of attribute values expressed as a single word or token.	
<b>Module</b>	tei
<b>Used by</b>	<u>teidata.enumerated</u> <u>teidata.sexElement</u> : <ul style="list-style-type: none"> <li>• <u>app</u>/<u>@loc</u></li> <li>• <u>m</u>/<u>@baseForm</u></li> <li>• <u>metamark</u>/<u>@function</u></li> </ul>
<b>Content model</b>	<pre>&lt;content&gt; &lt;dataRef name="token" restriction="^[^p{C}\p{Z}]+"/&gt; &lt;/content&gt;</pre>
<b>Declaration</b>	<pre>teidata.word = token { pattern = "^[^p{C}\p{Z}]+"</pre>
<b>Note</b>	Attributes using this datatype must contain a single ‘word’ which contains only letters, digits, punctuation characters, or symbols: thus it cannot include whitespace.

### 9.5.24. *teidata.xTruthValue*

<b>teidata.xTruthValue</b> (extended truth value) defines the range of attribute values used to express a truth value which may be unknown.	
<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre>&lt;content&gt; &lt;alternate&gt; &lt;dataRef name="boolean"/&gt; &lt;valList&gt; &lt;valItem ident="unknown"/&gt; &lt;valItem ident="inapplicable"/&gt; &lt;/valList&gt; &lt;/alternate&gt; &lt;/content&gt;</pre>
<b>Declaration</b>	<pre>teidata.xTruthValue = xsd:boolean   ( "unknown"   "inapplicable" )</pre>
<b>Note</b>	In cases where where uncertainty is inappropriate, use the datatype <code>teidata.TruthValue</code> .

### 9.5.25. *teidata.xpath*

<b>teidata.xpath</b> defines attribute values which contain an XPath expression.	
--	--

<b>Module</b>	tei
<b>Used by</b>	
<b>Content model</b>	<pre>&lt;content&gt;   &lt;textNode/&gt; &lt;/content&gt;</pre>
<b>Declaration</b>	<pre>teidata.xpath = text</pre>
<b>Note</b>	<p>Any XPath expression using the syntax defined in 6.2..</p> <p>When writing programs that evaluate XPath expressions, programmers should be mindful of the possibility of malicious code injection attacks. For further information about XPath injection attacks, see the article at OWASP.</p>
