Stand: Jänner 2022

1. Zu diesem Dokument

In diesem Dokument werden die Kodierrichtlinien für TEI/XML-Dokumente beschrieben, die im Projekt *Intertextuality in the Legal Papers of Karl Kraus. A Scholarly Digital Edition* (FWF Projektnr. P 31138-G30, PI DDr.in Katharina Prager) zur Anwendung kommen.

Dieses Projekt wird vom Ludwig Boltzmann Institut für Digital History (<https://geschichte.lbg.ac.at>) in Zusammenarbeit mit dem Austrian Centre for Digital Humanities and Cultural Heritage (ACDH-CH) der Österreichischen Akademie der Wissenschaften (<https://acdh.oeaw.ac.at>) und der Wienbibliothek im Rathaus (<https://www.wienbibliothek.at>) umgesetzt. Ziel des Projekts ist es, eine digitale Edition der Kanzleiakten aus der Kanzlei Oskar Samek zu erstellen, welche die Fälle dokumentieren, in die Karl Kraus involviert war. Diese digitale Edition soll es ihren Nutzer_innen ermöglichen, den unterschiedlichen intertextuellen Bezügen in diesen Akten nachzuforschen.

Als Grundlage dient dabei einerseits das Vorgängerprojekt *Karl Kraus Online* (<https://www.kraus.wienbibliothek.at>), andererseits die digitalisierte Fassung der Kanzleiakten in der digitalen Wienbibliothek (<https://www.dig-ital.wienbibliothek.at>). Diese beiden Quellen bauen auf der von Katharina Prager erstellten Ordnung der Bestandsliste des Kraus-Archivs der Wienbibliothek im Rathaus auf und orientieren sich an den Signaturen dieser Liste. Diese Ordnungslogik wird auch im vorliegenden Projekt als Ausgangsbasis übernommen. Ebenfalls eine wichtige Grundlage für die Editionsarbeit stellt die von Hermann Böhm erstellte, heute vergriffene Lese-Edition der Akten in vier Bänden dar (*Karl Kraus contra ...: die Prozeßakten der Kanzlei Oskar Samek in der Wiener Stadt- und Landesbibliothek*, bearb. und kommentiert von Hermann Böhm, Wien, Wiener Stadt- u. Landesbibliothek, Bd. 1–4, 1995–1997).

Im Rahmen des Projekts wird auf Basis der genannten Quellen für jedes erhaltene Einzeldokument im Archiv ein korrespondierendes TEI/XML-Dokument erstellt, in dem sich eine annotierte Transkription des Volltexts sowie alle relevanten Metadaten und Verweise auf Digitalisate des Archivdokuments befinden. Darüber hinaus wird pro Fall ein weiteres TEI/XML-Dokument angelegt, in dem die entsprechenden Metadaten festgehalten und eine Liste der zum Fall gehörigen Einzeldokumente angelegt wird. Wie genau diese TEI/XML-Dokumente entstehen und strukturiert sind, ist im Folgenden beschrieben.

2. Workflow

Der Workflow zur Erstellung eines Dokuments umfasst folgende Schritte:

- Auswahl des zu transkribierenden Dokuments
- Transkribus: Upload, Erstellen der Transkription
- Bildzuordnung
- Erstellen des TEI Dokuments
- Bearbeiten des TEI Dokuments

3. Metadaten des TEI-Dokuments

Das Element `<fileDesc>` enthält die Metadaten zum elektronischen Dokument.

</fileDesc>

```

3.1. Titel und Herausgeber_in

Das Element `<titleStmnt>` in der `<fileDesc>` enthält den Titel des Dokuments (`<title>`) sowie den Namen der Herausgeber_in (`<editor>`). Die hier über das Attribut `ref` verlinkte Person ist für die digitale Version des Dokuments hauptverantwortlich.

```

<titleStmnt>
  <title>Ladung zur Berufungsverhandlung (Landesgericht für Strafsachen I Wien, G. Z. 14 Bl 920/28, Josef Schaupp)</title>
  <editor ref="#IL"/>
</titleStmnt>

```

3.2. Herausgebende Institutionen

Im Element `<publisher>` im `<publicationStmnt>` finden sich Informationen zu den herausgebenden Institutionen des Dokuments. Im Falle des vorliegenden Projekts sind es drei Institutionen, die jeweils in einem `<publisher>`-Element mit entsprechenden Kindelementen (`<name>`, `<address>` (mit `<street>`, `<postCode>`, `<settlement>` und `<country>`) sowie `<ref>`) angeführt werden.

Das Element `<availability>` enthält im Element `<licence>` einen Verweis mittels `target` auf die Creative Commons-Lizenz, unter der die Daten bereitgestellt werden.

Die `<idno>` Elemente geben interne und externe Identifier an. In der Regel sind drei `<idno>`-Elemente vorhanden. Das erste verweist mit dem `type` URL und dem `subtype` legalkraus auf die ID in der digitalen Edition. Die zweite verweist mit demselben `type` und dem `subtype` krausonline auf die ID im schon genannten Vorgängerprojekt *Karl Kraus Online* (<https://www.kraus.wienbibliothek.at>). Das dritte `<idno>`-Element ist, insofern eine Transkription des Dokuments angefertigt wurde, vom `type` ID und dem `subtype` transkribus. Dieser letzte Identifier bezieht sich auf die ID im Transkriptionsprogramm Transkribus.

```

3.3. Verknüpfung mit dem Fall

Im Element `<title>` vom *type* collection im `<seriesStm>` findet sich die Information zu dem Fallkomplex, dem das Dokument angehört. Das Attribut *ref* verweist dabei auf das entsprechende Falldokument in der digitalen Edition.

```

<seriesStm>
  <title type="collection"
    ref="https://id.acdh.oeaw.ac.at/legalkraus/C_000002">Karl Kraus ca. Reichspost</title>
</seriesStm>

```

3.4. Status des Dokuments, Arbeitsstand

Der Status der Bearbeitung des gesamten Dokuments wird in der `<revisionDesc>` im Attribut *status* notiert. Ist das Dokument noch in Bearbeitung, hat *status* den Wert *draft*. Sind alle Arbeitsschritte für das Dokument abgeschlossen, hat *status* den Wert *done*.

Allgemeiner ausgedrückt umfassen die Arbeitsschritte, die in `<change>`-Elementen notiert werden, die Bearbeitung des TEI-Headers sowie der Faksimiles (*type* header_facsimile), die strukturelle Auszeichnung (*type* structure), die Vergabe von Referenzen (*type* references), die Annotation typographischer Besonderheiten (*type* typography), die Kennzeichnung von Intertexten (*type* intertexts) und Korrekturvorgänge (*type* corrections).

Jedes `<change>`-Element wird nicht nur näher im Hinblick auf den Arbeitsschritt mittels des *type*-Attributs bestimmt, sondern erhält auch ein *when-iso*-Attribut mit der Angabe des Datums der Fertigstellung des Arbeitsschrittes sowie ein *who*-Attribut, das auf die Person verweist, welche diesen Arbeitsschritt durchgeführt hat.

```

<!-- LU: wäre eine Überlegung wert, changes von Ingo im Sinne der Vereinheitlichung noch zu typisieren --><revisionDesc status="draft">
  <change type="intertexts"
    when-iso="2021-03-17" who="#JK"/>
  <change type="typography"
    when-iso="2021-03-17" who="#JK"/>
  <change type="references"
    when-iso="2021-03-17" who="#JK"/>
  <change type="structure"
    when-iso="2021-03-17" who="#JK"/>
  <change when-iso="2020-07-21T12:53:42.834Z"
    who="#IB">created by API</change>
  <change when-iso="2020-10-01T12:09:09.817Z"
    who="#IB">Replaced Text with Transcription of Transkribus Document 292191.</change>
</revisionDesc>

```

4. Metadaten zum historischen Dokument

Ebenfalls im `<teiHeader>` werden Metadaten zum historischen Dokument hinterlegt.

4.1. Quelle, Textzeugen, Beilagen

Informationen zur Quelle finden sich im Element `<sourceDesc>`. Im Kindelement `<listWit>` wird der Textzeuge bzw. werden die Textzeugen in einem oder mehreren `<witness>`-Elemente(n) mit einer *xml:id* sowie einer Verlinkung auf das entsprechende Faksimile in *facs* angegeben.

Stempel werden in der `<sourceDesc>` im Kindelement `<msDesc>` im Element `<ab>` mit dem Attribut *type* und dem Wert *stamp* notiert. Im Attribut *source* des `<stamp>`-Elements wird auf die Quelle des Stempels verwiesen, durch die *xml:id* wird der Stempel zudem eindeutig identifizierbar.

```

<msDesc>
  <ab type="stamp">
    <stamp xml:id="uuid_79f806a1-ab26-445f-b806-alab26c45fb5"
      source="#36793"/>
  </ab>
</msDesc>

```

Ist eine Beilage zu einem Dokument vorhanden, wird dieses im Element `<physDesc>` bzw. genauer in seinem Kindelement `<accMat>` mit einer *xml:id* sowie gegebenenfalls mit einer Verlinkung auf das entsprechende Beilagedokument in *source* festgehalten. Im Text selbst wird die Beilage mit dem Element `<ab>` versehen. Dieses erhält das Attribut *type* mit dem Wert *appendix* sowie gegebenenfalls eine Verlinkung auf das entsprechende `<accMat>`-Element im Header. Ein Beispiel für die Kodierung von Beilagen im `<body>`:

```
<ab type="appendix"
  source="#D_000002-002-000-acc001">1 Beilage</ab>
```

Informationen zur Materialität des Dokuments sind ebenso in der `<physDesc>` im Kindelement `<ab>` mit dem *type* `materiality` notiert. In `<objectType>` wird mit dem Attribut *ref* auf die projektspezifische Taxonomie verwiesen, in der die zur Auswahl stehenden Materialitätstypen definiert sind. Als String sind ebenso eine Prosabeschreibung des Materialitätstyps sowie die entsprechende Sigle vorhanden. Sind mehrere Textzeugen überliefert, werden mehrere `<objectType>`-Elemente angelegt und mit *source*-Attributen versehen.

```
<sourceDesc>
  <listWit>
    <witness xml:id="D_000002-002-000-wit01"
      facs="#D_000002-002-000-facs001"/>
  </listWit>
  <msDesc>
    <ab type="stamp">
      <stamp xml:id="uuid_79f806a1-ab26-445f-b806-a1ab26c45fb5"
        source="#36793"/>
    </ab>
    <physDesc>
      <accMat xml:id="D_000002-002-000-acc001"
        source="#D_000002-002-001">1 Beilage</accMat>
      <ab type="materiality">
        <objectType ref="https://vocabs.acdh.oeaw.ac.at/legalkraus/v1.0/M.T.HSN">Typoskript mit handschriftlichen Annotationen, M.T.HSN</objectType>
      </ab>
    </physDesc>
  </msDesc>
</sourceDesc>
```

4.2. Kontextinformationen

Im Element `<profileDesc>` lassen sich Kontextinformationen zum Dokument, etwa den beteiligten Personen, dem Entstehungsdatum, usw. hinterlegen.

4.2.1. Datierung

Zur Datierung (und als Grundlage für eine Sortierung) wird innerhalb von `<creation>` ein Datum im ISO-Format (JJJJ-MM-TT) im Attribut *when-iso* angegeben. Ist ein Dokument nicht eindeutig datierbar, so wird das Datum mit *notBefore-iso* und / oder *notAfter-iso* eingeschränkt. Für die Sortierung wird *sortDate* hinzugefügt. Wenn eine Datierung nicht möglich ist, ist weder *sortDate* noch ein ISO-Wert vorhanden. Zur weiteren Klassifizierung des Datums wird *subtype* eingeführt. Zur Auswahl stehen die Werte *produced* (Datum der Entstehung) und *received* (Datum des Empfangens). Der String entspricht einem normalisierten Datum im Format TT.MM.JJJJ.

```
<creation>
  <date type="sortDate" subtype="received"
    when-iso="1922-11-30">30.11.1922</date>
</creation>
```

4.2.2. Sprache

In `<langUsage>` wird die Sprache des Dokuments festgehalten. In `<language>` wird dem Attribut *ident* ein Wert zugeordnet, z. B. *de* für ein deutschsprachiges Dokument (ISO 639).

```
<langUsage>
  <language ident="de">Deutsch</language>
</langUsage>
```

4.2.3. Klassifizierung des Dokuments

Auf der Dokumentenebene wird in `<textClass>` der Dokumenttyp definiert. Im Kindelement `<keywords>` mit dem passenden `<term>` ist eine Prosabezeichnung des Dokumenttyps zu finden. Im Kindelement `<classCode>` mit dem Attribut *scheme*, welches auf den entsprechenden Datensatz in der projektspezifischen Taxonomie verweist, ist als String die Sigle für den Datensatz zu finden. Grundsätzlich sind mehrere Dokumenttypen bei einem Dokument möglich. Sind mehrere Textzeugen vorhanden, so wird `<term>` und `<classCode>` das Attribut *source* hinzugefügt, das auf den entsprechenden Textzeugen verweist.

```
<textClass>
  <keywords>
    <term source="#D_000002-002-000-wit01">Abhandlung</term>
  </keywords>
  <classCode scheme="https://vocabs.acdh.oeaw.ac.at/legalkraus/v1.0/D.J.ABH"
    source="#D_000002-002-000-wit01">D.J.ABH</classCode>
</textClass>
```

4.2.4. Metadaten zu Korrespondenzstücken

Metadaten zu Korrespondenzstücken werden in der `<correspDesc>` versammelt. Bei Dokumenten, die keine Korrespondenzstücke ausmachen, fehlt dieser Abschnitt. Es gibt drei Möglichkeiten für die Struktur der `<correspDesc>`: Erstens ist sowohl der *die Absender_in* als auch der *die Empfänger_in* eine Person. Zweitens ist der *die Absender_in* eine Person, der *die Empfänger_in* eine Institution. Drittens ist der *die Absender_in* eine Institution, der *die Empfänger_in* eine Person. Entsprechend kommen die Elemente `<persName>` bzw. `<orgName>` zum Einsatz.

Die Namen werden dem Original entnommen. Zeilenfälle werden mit einem senkrechten Strich (|) notiert. Die 'Rolle', z. B. Rechtsanwalt, wird gegebenenfalls ebenso angegeben.

Der_Die Absender_in wird in `<correspAction>` mit dem Attribut *type* und dem Attributwert *sent* festgehalten. Der_Die Empfänger_n hingegen ist in `<correspAction>` *type* *received* zu finden.

In `<address>` werden die Anschriften dokumentiert. `<street>` verweist auf einen Eintrag in der PMB und `<settlement>` ebenso. Das Datum wird sowohl im ISO-Format in *date* als auch originalgetreu im entsprechenden String wiedergegeben.

In `<noteGrp>` sind optional weitere Metadaten zur Korrespondenz enthalten. Mittels `<note>` und entsprechenden *type*-Attributen kann ein Betreff (subject) und eine Diktatsigle (dictation) verzeichnet werden.

```
<correspDesc>
  <correspAction type="sent">
    <persName ref="#11988">Karl Kraus</persName>
    <address>
      <street corresp="#50496">Hintere Zollamtsstrasse Nr.3</street>
      <settlement ref="#53">Wien III.</settlement>
    </address>
    <date when-iso="1931-01-15"/>
  </correspAction>
  <correspAction type="received">
    <orgName ref="#50491">Strafbezirksgericht I</orgName>
    <address>
      <street corresp="#50664"/>
      <settlement ref="#53">Wien</settlement>
    </address>
    <date when-iso="1931-01-16">16. JAN. 1931</date>
  </correspAction>
  <noteGrp>
    <note type="subject">Privatanklage</note>
    <note type="dictation"/>
  </noteGrp>
</correspDesc>
```

4.2.5. Schreiberhände

Schreiberhände werden im Header innerhalb des Elements `<handNotes>` definiert. Sind keine `<handNotes>` angelegt, handelt es sich standardmäßig um Typoskripte.

Jede Schreiberhand wird in einem `<handNote>`-Element festgehalten. Dieses enthält eine *xml:id*, einen Hinweis auf das Schreibmedium (Bleistift, Tinte ...) in *medium* sowie gegebenenfalls eine Verlinkung mit der schreibenden Person in *scribeRef*, dem entsprechenden Textzeugen in *source*, einer Angabe zur Sicherheit der Aussage in *cert* und eine Zuschreibung der Verantwortlichkeit für die Definition der Hand in *resp*.

```
<handNotes>
  <handNote xml:id="D_000001-001-000-hand01">
    source="#D_000001-001-000-wit01" scribeRef="#38909" medium="black-ink"
    cert="high" resp="#IL"/>
</handNotes>
```

5. Bilddaten

Die der digitalen Edition zugrundeliegenden Faksimiles sind in `<facsimile>` zu finden. Innerhalb von `<facsimile>` ist mindestens eine `<surfaceGrp>` enthalten. Diese beschreibt ein Blatt. Dieses Blatt kann in mehrere `<surface>`-Elemente unterteilt werden. Diese machen die Seiten aus, die mittels *type* und *recto* bzw. *verso* (Vorder-/ Rückseite) noch näher bestimmt werden. Diese `<surface>`-Elemente beinhalten wiederum ein bis drei `<graphic>`-Elemente, die mittels *source* und entsprechenden Attributwerten unterschieden werden. Liegt ein Doppelblatt vor, so wird die Gruppierung der Faksimiles entsprechend angepasst.

Die Faksimiles des Vorläuferprojekts "Karl Kraus Online" werden mit dem Attributwert *krausonline* versehen, jene der Wienbibliothek im Rathaus mit *wienbibliothek* und jene der projekteigenen Scans mit *scans*. Sowohl `<facsimile>` als auch `<surfaceGrp>` und `<surface>` erhalten eine *xml:id* zur eindeutigen Identifizierung. Derzeit sind die Faksimiles nur für den 'Haupttextzeugen' zugeordnet. Insofern weitere Textzeugen vorhanden und verlinkt sind, werden diese in einem weiteren `<facsimile>`-Element mit dem Attribut *type* und dem Wert *further-witnesses* zur vorläufigen Differenzierung versehen.

```
<facsimile xml:id="D_000002-002-000-facs001">
  <surfaceGrp xml:id="D_000002-002-000-facs001-1001">
    <surface xml:id="D_000002-002-000-facs001-1001-p001">
      type="recto">
        <graphic url="http://www.kraus.wienbibliothek.at/sites/biographeme.com/files/images/object/00000019.jpg"
          source="krausonline"/>
        <graphic url="ZPH_1545-1/001_010/00000019.jpg"
          source="scans"/>
        <graphic url="https://www.digital.wienbibliothek.at/wbrobv02/i3f/v21/2540028/full/full/0/default.jpg"
          source="wienbibliothek" ana="status:checked"/>
      </surface>
    <surface xml:id="D_000002-002-000-facs001-1001-p002">
      type="recto">
        <graphic url="http://www.kraus.wienbibliothek.at/sites/biographeme.com/files/images/object/00000021.jpg"
          source="krausonline"/>
        <graphic url="ZPH_1545-1/001_010/00000021.jpg"
          source="scans"/>
      </surface>
    </surfaceGrp>
  </facsimile>
```

```
<graphic url="https://www.digital.wienbibliothek.at/wbrobv02/i3f/v21/2540030/full/full/0/default.jpg"
source="wienbibliothek" ana="status:checked"/>
</surface>
</surfaceGrp>
</facsimile>
```

6. Textstruktur

Trennstriche usw. werden nicht kodiert, stattdessen werden, wenn möglich, Struktureinheiten angesetzt.

6.1. Seitenwechsel

Seitenwechsel werden mit `<pb>` markiert. Sie werden außerdem durch das Attribut `n` und dem entsprechenden Attributwert (z. B. 1 für die erste Seite) ausgezeichnet. Darüber hinaus werden sie mit den Bilddaten verknüpft. Dies geschieht über das Attribut `fac`s und dem entsprechenden Verweis auf das `<surface>`-Element. Durch das Attribut `xml:id` erhält das Element außerdem eine eindeutige ID.

```
<pb xml:id="uuid_01b00d2d-7002-4209-b425-a0a147ea957d"
n="1"
facs="#D_000002-002-000-facs001-1001-p001"/>
```

6.2. Absätze

Die größte Struktureinheit nach der Seite (`<pb>`) ist der Absatz: `<p>`. Dieser erhält eine `xml:id`.

```
<p xml:id="uuid_401e1862-85b6-4dfb-9d95-77543d6f4edf">
<lb xml:id="uuid_d3bfe99e-be54-4a0f-bfe9-9ebe54fa0f46"/>1.) Anberaumung einer Hauptverhandlung;
<lb xml:id="uuid_bf8b41d7-0095-409d-8b41-d70095a09dlc"/>2.) Ladung des <rs type="person" ref="#51602">Beschuldigten</rs>;
<lb xml:id="uuid_2f30be6b-1ca6-45fe-b0be-6b1ca615fe7d"/>3.) Verlesung des Berichtigungsschreibens und der vorgelegten
<lb xml:id="uuid_7d4a1760-6919-42fb-8a17-60691902fb9c"/>
<rs type="work" ref="#53857">Zeitungsnummer</rs>
</p>
```

6.3. Abschnitte / Divisions: mehrere Textzeugen, unterschiedliche Dokumente unter einer Signatur und Rekonstruktionen Böhm's

Sind mehrere Textzeugen eines Schriftstücks vorhanden und werden auch mehrere Textzeugen ediert (s. editorische Richtlinien), so wird nach dem 'primären' Textzeugen im `<body>` der weitere Textzeuge eingefügt und mit `<div>` ausgezeichnet. Außerdem erhält er ein `type`-Attribut mit dem Wert `wit`. Verlinkt wird der Textzeuge in `<div>` mit einem `source`-Attribut, das auf das entsprechende `<witness>`-Element bzw. das Faksimile verweist. Der Abschnitt selbst wird, ebenso wie der folgende, mit einer `xml:id` eindeutig identifizierbar gemacht.

```
<div xml:id="D_000068-044-000-wit-div-001"
type="wit" source="#D_000068-044-000-wit01"/>
```

Sind mehrere Textzeugen eines Schriftstücks vorhanden, wird aber nur einer in seiner Gänze kodiert, kann Varianz unter Textzeugen trotzdem mittels eines Variantenapparats festgehalten werden. Dabei wird an der jeweiligen Stelle im `<body>` ein Apparat mit `<app>` eingefügt. In diesem wird in `<lem>` mit den Attributen `wit` (verlinkt den betroffenen Textzeugen) und `hand` (verlinkt die betroffene Schreiberhand) ein Lemma bzw. eine präferierte Lesart festgelegt. Im folgenden `<rdg>`, mit denselben Attributen wie bei `<lem>`, wird die Variante eines weiteren Textzeugen notiert.

```
<lb xml:id="uuid_55cfaeb3-0c8b-4901-8fae-b30c8b6901ee"/>Zu der Meldung, dass die Wiener
<app>
<lem wit="#D_000002-002-000-wit01"
hand="#D_000002-002-000-hand01">Renaissancebühne</lem>
<rdg wit="#D_000002-002-000-wit02"
hand="#D_000002-002-000-hand02">Bühne</rdg>
</app>
```

Wenn es zur Verwendung dieses Variantenapparats in einem Dokument kommt, muss im Header, nach `<fileDesc>` und vor `<profileDesc>`, eine `<encodingDesc>` eingefügt werden. Diese beinhaltet wiederum das Element `<variantEncoding>`. Bei diesem wird durch den Wert `parallel-segmentation` für `method` und den Wert `internal` für `location` angegeben, um welche Form des Variantenapparats es sich handelt.

```
<encodingDesc>
<variantEncoding method="parallel-segmentation"
location="internal"/>
</encodingDesc>
```

Wenn unterschiedliche Dokumente unter einer Signatur vorhanden sind (z. B. ein Brief und ein Protokoll), wird ebenfalls auf `<div>` zurückgegriffen, hier mit dem `type doc`. Das Attribut `source` verweist gegebenenfalls auf eine weitere Signatur, die das entsprechende Schriftstück verzeichnet.

```
<div xml:id="D_000068-044-000-doc-div-001"
type="doc" source="#D_000068-044-001"/>
```

Nicht nur für die Auszeichnung mehrerer Textzeugen und unterschiedlicher Dokumente unter einer Signatur, sondern auch für Rekonstruktionen von Dokumenten durch Hermann Böhm wird `<div>` verwendet. Dies betrifft

den Aktenkomplex 192, in dem einige Schriftstücke nicht ediert wurden, weil die entsprechenden Objekte fehlen. Stattdessen werden Rekonstruktionen dieser Texte von Hermann Böhm festgehalten und mit einem *type*-Attribut mit dem Wert *boehm-reconstruction* gekennzeichnet.

```
<div type="boehm-reconstruction">
  <ab>Ersucht um Übersendung eines Werkverzeichnisses von Karl Kraus mit Anzahl der Exemplare und Preisangabe, da der Verlag Melantrich daran in
```

6.4. Fehlende Objekte

Ist ein Objekt nicht (mehr) vorhanden, aber dennoch mittels einer Signatur im Aktenbestand verzeichnet, so wird im entsprechenden <body> der Dokumente in einem <div>-Element mit dem *type* und dem Wert *missing-object* mit dem Hinweis "Objekt fehlt." darauf aufmerksam gemacht.

```
<text>
  <body>
    <div type="missing-object">
      <ab>D_000011-002-000: Objekt fehlt.</ab>
    </div>
  </body>
</text>
```

6.5. Fehlende Transkriptionen

Wurde ein Dokument nicht transkribiert, ist aber dennoch mittels einer Signatur im Aktenbestand verzeichnet, so wird im entsprechenden <body> der Dokumente in einem <div>-Element mit dem *type* und dem Wert *no-transcription* mit dem Hinweis "Keine Transkription vorhanden." darauf aufmerksam gemacht.

```
<text>
  <body>
    <div type="no-transcription">
      <ab>Keine Transkription vorhanden.</ab>
    </div>
  </body>
</text>
```

6.6. Zeilenfall

Zeilenfälle werden mit <lb> markiert. Kommt es innerhalb eines Worts zu einem Zeilenfall, so wird in der folgenden Zeile dem Element <lb> das Attribut *break* mit dem Wert *no* beigelegt. Insofern eine eindeutige Identifizierung von Zeilen angestrebt wird, erhält jedes <lb>-Element außerdem eine *xml:id*.

```
<lb xml:id="uuid_45105d00-1bba-4ea6-905d-001bbabaea608"/>Beschuldigter: <rs type="person"
ref="https://pmb.acdh.oeaw.ac.at/entity/51602">Josef <hi rend="spaced">Koller</hi>
</rs>, verantwortlicher Redak
<lb xml:id="uuid_588cb55f-c706-4cc9-8cb5-5fc706dccc959"
break="no"/>teur der Zeitung „<rs type="institution" ref="37568">Der Wiener Tag</rs>"
```

6.7. Marginalien

Marginalien werden auf zwei Arten ausgezeichnet:

Marginalien ohne Text: Kodierung mit <metamark>, dem Attribut *function* und dem Wert *marginal*. Mittels *hand* wird auf die entsprechende Schreiberhand verwiesen, mittels *rend* auf die Position der Marginalie auf dem Objekt.

```
Abschrift.<metamark function="marginal"
hand="#D_000001-001-000-hand01" rend="marginRight"/>
```

Marginalien mit Text: Kodierung mittels <note>, dem Attribut *type* und dem Wert *marginal*. Mittels *hand* wird auf die entsprechende Schreiberhand verwiesen, mittels *rend* auf die Position der Marginalie auf dem Objekt.

```
Abschrift.<note type="marginal"
hand="#D_000001-001-000-hand01" rend="marginRight">1933</note>
```

7. Typografische Hervorhebungen

Grundsätzlich werden typographische Auszeichnungen mit <hi> ausgezeichnet. Je nachdem, welche Hervorhebung vorliegt, kommen unterschiedliche Werte für *rend* zum Einsatz. Handelt es sich um eine Unterstreichung, so wird der Wert *underlined* angegeben. Liegt eine Sperrung vor, bekommt *rend* den Wert *spaced*. Fette Stellen werden mit *bold* ausgezeichnet, kursive mit *italics*.

```
<hi rend="spaced">Privatanklage</hi>
```

Liegt eine handschriftliche Hervorhebung vor, so kann die entsprechende Schreiberhand im Attribut *hand* verlinkt werden.

```
<hi rend="underlined"
hand="#D_000001-001-000-hand01">Anträge</hi>
```

8. Eingriffe in den Text

Semantisch relevante Sofort- und Spätkorrekturen werden auf unterschiedliche Weisen ausgezeichnet:

Einfügungen werden mit `<add>` ausgezeichnet. Handelt es sich um eine handschriftliche Einfügung, so wird das Attribut *hand* mit Verweis auf die entsprechende Schreiberhand ebenso verzeichnet.

```
Ein <add hand="#D_000001-001-000-hand01">neuer</add> Antrag.
```

Tilgungen werden mit `` ausgezeichnet. Handelt es sich um eine handschriftliche Tilgung, so wird das Attribut *hand* mit Verweis auf die entsprechende Schreiberhand ebenso verzeichnet.

```
Ein <del hand="#D_000001-001-000-hand01">alter</del> Antrag.
```

Ersetzungen werden mit `<subst>` ausgezeichnet. Handelt es sich um eine handschriftliche Ersetzung, so wird das Attribut *hand* mit Verweis auf die entsprechende Schreiberhand ebenso verzeichnet.

```
Ein <subst hand="#D_000001-001-000-hand01">
<del>alter</del>
<add>neuer</add>
</subst> Antrag.
```

Bestandteile von Umstellungen werden mit `<seg>` mit dem *type* transposition ausgezeichnet. Jedes `<seg>`-Element erhält dabei eine *xml:id*. Die Umstellung selbst wird mit dem Element `<metamark>` gekennzeichnet, welches das Attribut *function* mit dem Wert transposition und einer Verlinkung auf das entsprechende `<seg>`-Element in *target* enthält. Handelt es sich um eine handschriftliche Umstellung, so wird die entsprechende Schreiberhand mit Hilfe des Attributs *hand* angeführt.

```
<seg type="transposition"
xml:id="D_000001-001-000_seg001">Der</seg>
<metamark function="transposition"
hand="#D_000001-001-000-hand01" target="#D_000001-001-000_seg001"/>
<seg type="transposition"
xml:id="D_000001-001-000_seg002">Antrag</seg>
<metamark function="transposition"
hand="#D_000001-001-000-hand01" target="#D_000001-001-000_seg002"/>
<seg type="transposition"
xml:id="D_000001-001-000_seg003">ist</seg>
<metamark function="transposition"
hand="#D_000001-001-000-hand01" target="#D_000001-001-000_seg003"/>
<seg type="transposition"
xml:id="D_000001-001-000_seg004">neu</seg>
<metamark function="transposition"
hand="#D_000001-001-000-hand01" target="#D_000001-001-000_seg004"/>.
```

Im Header wird sodann in die `<profileDesc>` `<listTranspose>` mit der betroffenen Umstellung eingefügt. Im Element `<transpose>` mit einer möglichen Verlinkung auf eine Schreiberhand in *hand* befinden sich sodann `<ptr>`-Elemente, die mittels des Attributs *target* auf die entsprechenden `<seg>`-Elemente im `<body>` verweisen.

```
<listTranspose>
<transpose hand="#D_000001-001-000-hand01">
<ptr target="#D_000001-001-000_seg004"/>
<ptr target="#D_000001-001-000_seg003"/>
<ptr target="#D_000001-001-000_seg001"/>
<ptr target="#D_000001-001-000_seg002"/>
</transpose>
</listTranspose>
```

Getilgte bzw. zurückgenommene Überarbeitungen werden mit `<restore>` ausgezeichnet. Handelt es sich um eine handschriftliche Korrektur, so wird die entsprechende Schreiberhand über das Attribut *hand* hinzugefügt.

```
Der Antrag ist <restore hand="#D_000001-001-000-hand01">
<del hand="#D_000001-001-000-hand01">sehr</del>
</restore> alt.
```

Sind Korrekturen innerhalb von Korrekturen vorhanden, etwa eine Tilgung in einer Hinzufügung (`` in `<add>`), so werden die Elemente entsprechend geschachtelt. Davon ausgenommen ist die nicht TEI-konforme Schachtelung von `<subst>` in `<subst>`.

```
Der Antrag <subst hand="#D_000001-001-000-hand01">
<del>ist alt</del>
<add>
<subst>
<del> war</del>
<add>ist</add>
</subst> neu</add>
</subst>.
```

Leerstellen werden mit `<gap>` gekennzeichnet. Der Grund für die Leerstelle in der digitalen Edition wird in *reason* angegeben. Als Attributwerte stehen cancelled (abgebrochen), deleted (getilgt), editorial (aus editorischen Gründen nicht übertragen) und illegible (unleserlich) zur Auswahl. Im Attribut *extent* kann das Ausmaß der Leerstelle dokumentiert werden. Die Werte sind in diesem Fall nicht klar definiert, da beispielsweise several-characters neben three-words oder one-line vorkommen kann.

```
Dieser Antrag <gap reason="illegible" extent="1-word"/> neu.
```

Komplexe Korrekturen werden mit Hilfe eines Pointers annotiert. Haben wir beispielsweise den Satzausschnitt "dessen Besprechung über das Kriegsmanifest" vorliegen, wobei "Besprechung über das" nachträglich durchgestrichen und mit der handschriftlichen Einfügung "Kritik an dessen Stelle" ersetzt wurde, hier aber wieder "Kritik an dessen" getilgt und die Streichung von "über das" zurückgenommen wurde, können wir den Ausschnitt wie folgt kodieren:

```
<p>dessen <subst>
<del hand="#A" seq="1">Besprechung
```

```
<restore xml:id="XY" hand="#A" seq="3">über
das</restore>
</del>
<del hand="#A" seq="2">
<add hand="#A" seq="1">Kritik an dem</add>
</del>
<add hand="#A" seq="2">Stelle</add>
</subst>
<ptr target="#XY" type="transposition"/> Kriegsmanifest</p>
```

Handelt es sich zwar um keine handschriftliche Korrektur, jedoch sehr wohl um eine handschriftliche Notiz, dann wird diese mit `<note>` und einem Verweis auf die entsprechende Schreiberhand mittels *hand* ausgezeichnet.

```
<note hand="#D_000001-001-000-hand01">Der Antrag liegt nicht vor.</note>
```

9. Annotation und semantische Erschließung

9.1. Verweise auf Entitäten

Gewisse Entitäten im `<body>` werden mittels `<rs>` und entsprechenden *type*-Attributwerten ausgezeichnet. *person* wird für die Verlinkung von Personen herangezogen, *institution* für jene von Institutionen. Orte werden mit *place* kodiert, Werke mit *work* und Gesetzestexte mit *law*. Bei `<rs>` mit dem *type* *work* gibt es ferner Untergruppen in Form von *subtype* mit den möglichen Werten *pmb* (für 'Werke' in der PMB), *fackel* (für 'Werke' aus der "Fackel") und *legal-doc* (für 'Werke', die sich im Korpus der Rechtsakten-Edition befinden). Adressen erhalten sowohl *place* als auch *subtype* mit dem Wert *address*. Schachtelungen von `<rs>` sind möglich.

```
<rs type="work" ref="#53851">Der Wiener Tag</rs>
```

Durch das *ref*-Attribut wird die Entität außerdem mit dem entsprechenden Datensatz in der PMB bzw. der "Fackel", dem entsprechenden Dokument in den Rechtsakten oder ALEX verlinkt.

Personal- und Possessivpronomen werden nicht ausgezeichnet. Ausschlaggebend sind Namen bzw. Substantive. Ebenso nicht näher bestimmt werden Namen literarischer Figuren.

9.2. Entitäten im `<back>`

Im `<back>`-Element werden alle erwähnten Personen, Institutionen, Orte, Werke und erwähnte Dokumente aus dem Rechtsakten-Korpus aufgelistet.

Alle Personen, Institutionen, Orte und Werke werden mit *xml:ids* versehen, deren Werte auf den entsprechenden Datensatz in der PMB verweisen. Alle erwähnten Dokumente aus dem Rechtsakten-Korpus werden außerdem mit den entsprechenden *xml:ids* der betroffenen Dokumente verlinkt.

Für die in einem Dokument erwähnten Personen gibt es im `<back>` eine `<listPerson>`. Jede erwähnte Person wird in einem eigenen `<person>`-Element dokumentiert. Jedes `<person>`-Element enthält wiederum diverse weitere Informationen. Darunter fallen der Name (in `<persName>`), ggf. eine Verlinkung mit Wikipedia oder dem Wien Geschichte Wiki, die Geburts- und Sterbedaten sowie -ort (in `<birth>` und `<death>`), das Geschlecht (in `<sex>`), der Beruf (in `<occupation>`), diverse IDs (in `<idno>`) und 'Zugehörigkeiten' einer Person (in `<affiliation>`) sowie verschiedene mit ihr in Verbindung stehende Ereignisse (in `<listEvent>`). Ebenso verzeichnet wird die Zugehörigkeit des Datensatzes der Person zu einer Sammlung in der PMB (in `<listBibl>`). Außerdem aufgenommen werden die Dokumente, in denen diese Person noch erwähnt wird (in `<listEvent>` mit `<event>` mit dem *type* *mentioned*).

Für die in einem Dokument erwähnten Orte gibt es im `<back>` eine `<listPlace>`. Jeder erwähnte Ort wird mit einem eigenen `<place>`-Element dokumentiert. Jedes `<place>`-Element enthält wiederum diverse weitere Informationen. Darunter fallen der Name (in `<placeName>`), die Koordinaten (in `<location>` mit dem *type* *coords*), übergeordnete Ortseinheiten (in `<location>` mit dem *type* *located_in_place*) und ggf. verschiedene IDs (in `<idno>`). Ebenso verzeichnet wird die Zugehörigkeit des Datensatzes des Ortes zu einer Sammlung in der PMB (in `<listBibl>`). Außerdem aufgenommen werden die Dokumente, in denen dieser Ort noch erwähnt wird (in `<listEvent>` mit `<event>` mit dem *type* *mentioned*).

Für die in einem Dokument erwähnten Institutionen gibt es im `<back>` eine `<listOrg>`. Jede erwähnte Institution wird mit einem eigenen `<org>`-Element dokumentiert. Jedes `<org>`-Element enthält wiederum diverse weitere Informationen. Darunter fallen der Name und ggf. eine Verlinkung mit Wikipedia oder dem Wien Geschichte Wiki (in `<orgNameName>`), übergeordnete Ortseinheiten (in `<location>` mit dem *type* *located_in_place*) und diverse IDs (in `<idno>`). Ebenso verzeichnet wird die Zugehörigkeit des Datensatzes der Institution zu einer Sammlung in der PMB (in `<listBibl>`). Außerdem aufgenommen werden die Dokumente, in denen diese Institution noch erwähnt wird (in `<listEvent>` mit `<event>` mit dem *type* *mentioned*).

Für die in einem Dokument erwähnten Werke gibt es im `<back>` eine nicht näher definierte `<listBibl>`. Jedes erwähnte Werk wird mit einem eigenen `<bibl>`-Element dokumentiert. Jedes `<bibl>`-Element enthält wiederum diverse weitere Informationen. Darunter fallen der Titel (in `<title>`), der die Autorin (in `<author>`), das Datum (in `<date>`) und diverse IDs (in `<idno>`). Ebenso verzeichnet wird die Zugehörigkeit des Datensatzes des Werks zu einer Sammlung in der PMB (in `<note>`). Außerdem aufgenommen werden die Dokumente, in denen dieses Werk noch erwähnt wird (in `<listEvent>` mit `<event>` mit dem *type* *mentioned*).

Für die in einem Dokument erwähnten Dokumente aus dem Rechtsakten-Korpus gibt es im `<back>` eine `<listBibl>` mit dem *type* *legal-doc*. Jedes dieser Dokumente wird mit einem eigenen `<bibl>`-Element dokumentiert. Jedes `<bibl>`-Element enthält wiederum diverse weitere Informationen. Darunter fallen der Titel (in `<title>`), das

Datum (in `<date>`) und die URL zum Datensatz in der ARCHE (in `<idno>`). Außerdem aufgenommen werden die Dokumente, in denen dieses Werk noch erwähnt wird (in `<listEvent>` mit `<event>` mit dem *type* mentioned).

```

9.3. Zitate, wörtliche Reden

Zitate werden mit `<quote>` ausgezeichnet, insofern sie in Anführungszeichen stehen. Diese wurden im Zuge der Transkription normalisiert. Die `<quote>`-Elemente erhalten eine *xml:id* sowie einen Verweis auf den Ursprung des Zitats mittels *source*.

```

„<quote xml:id="uuiid_3ddb9d-2d25-4017-a98b-44dbc216608c"
source="https://fackel.oeaw.ac.at/E/908,007">groteske Bemerkung</quote>“

```

Handelt es sich um eine wörtliche Rede, so wird das Element `<q>` mit dem Attribut *type* und dem Wert *spoken* herangezogen. Ist der/die Sprecher_in der Aussage identifizierbar, wird sie mit dem *who*-Attribut verlinkt.

```

„<q type="spoken" who="#38909">hineingebracht</q>“

```

9.4. Notizen

Das Element `<note>` wird nicht nur in der `<correspDesc>` für die Auszeichnung von Diktatsiglen und Betreffen herangezogen, sondern, wie schon erwähnt, auch für Marginalien. Darüber hinaus werden Notizen der Kanzlei

Oskar Samek mit <note>, dem Attribut *type* mit dem Wert *paratext* und dem Attribut *resp* mit dem Wert *law-firm* verzeichnet.

```
<note type="paratext" resp="law-firm">Betrifft: <rs type="person" ref="#11988">Kraus</rs> - <rs type="person" ref="#11910">Kerr</rs>
<lb xml:id="uuid_fba404e0-86b9-42fb-a404-e086b9a2fb21"/>expediert am 3. Jänner 1927.
</note>
```

10. IDs

IDs bzw. Identifier werden wie folgt vergeben:

Die Dokumente selbst erhalten eine ID in der Form *D_XXXXXX-XXX-XXX.xml*, wobei die erste Ziffernkombination den Fall bezeichnet (vgl. die IDs für Fälle in der Form *C_XXXXX*), die zweite das Dokument und die dritte gegebenenfalls eine Beilage.

```
<TEI xml:base="https://id.acdh.oeaw.ac.at/legalkraus"
xml:id="D_000112-029-000.xml"
prev="https://id.acdh.oeaw.ac.at/legalkraus/D_000112-028-000.xml"
next="https://id.acdh.oeaw.ac.at/legalkraus/D_000112-030-000.xml" xmlns="http://www.tei-c.org/ns/1.0"/>
```

Als Attribute des Elements <TEI> werden außerdem die *xml:base*, der Namespace (*xmlns*, im Beispiel nicht vorhanden) sowie *prev* und *next* angeführt. Letztere Attribute verweisen auf das vorangehende sowie das folgende Dokument.

<witness>-Elemente, also Textzeugen, bekommen eine ID in der Form *D_XXXXXX-XXX-XXX-witxx*. Der ID des Dokuments wird also "witxx" hinzugefügt.

```
<witness xml:id="D_000002-002-000-wit01"
facsimile="#D_000002-002-000-facs001"/>
```

Die IDs der <facsimile>-Elemente ergibt sich ebenso aus der ID des Dokuments und einem Zusatz in der Form "facsxxx". Dieser ID wird noch ein weiterer Zusatz in der Form "lxxx" für <surfaceGrp>-Elemente hinzugefügt. Für die ID eines <surface>-Elements wird die ID der <surfaceGrp> noch einmal erweitert um "pxxx".

```
<facsimile xml:id="D_000002-002-000-facs001">
<surfaceGrp xml:id="D_000002-002-000-facs001-1001">

</p>
```

11. TEI-Modifikation

11.1. Elements

11.1.1. <TEI>

<u><TEI></u> (TEI document) contains a single TEI-conformant document, combining a single TEI header with one or more members of the <i>model.resource</i> class. Multiple <u><TEI></u> elements may be combined within a <u><TEI></u> (or <i><teiCorpus></i>) element. [4. Default Text Structure 15.1. Varieties of Composite Text]	
Module	textstructure
Attributes	<p>Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.typed</u> (@type, @subtype)</p> <p>version specifies the version number of the TEI Guidelines against which this document is valid.</p> <p>Status Optional</p> <p>Datatype <u>teidata.version</u></p>

	<p>Note</p> <p>Major editions of the Guidelines have long been informally referred to by a name made up of the letter P (for Proposal) followed by a digit. The current release is one of the many releases of the fifth major edition of the Guidelines, known as P5. This attribute may be used to associate a TEI document with a specific release of the P5 Guidelines, in the absence of a more precise association provided by the <i>source</i> attribute on the associated <code><schemaSpec></code>.</p>
Contained by	textstructure: <u>TEI</u>
May contain	header: <u>teiHeader</u> textstructure: <u>TEI text</u> transcr: <u>facsimile</u>
Note	This element is required. It is customary to specify the TEI namespace <code>http://www.tei-c.org/ns/1.0</code> on it, using the <i>xmlns</i> attribute.
Example	<pre><TEI version="3.3.0" xmlns="http://www.tei-c.org/ns/1.0"> <teiHeader> <fileDesc> <titleStmt> <title>The shortest TEI Document Imaginable</title> </titleStmt> <publicationStmt> <p>First published as part of TEI P2, this is the P5 version using a name space.</p> </publicationStmt> <sourceDesc> <p>No source: this is an original work.</p> </sourceDesc> </fileDesc> </teiHeader> <text> <body> <p>This is about the shortest TEI document imaginable.</p> </body> </text> </TEI></pre>
Example	<pre><TEI version="2.9.1" xmlns="http://www.tei-c.org/ns/1.0"> <teiHeader> <fileDesc> <titleStmt> <title>A TEI Document containing four page images </title> </titleStmt> <publicationStmt> <p>Unpublished demonstration file.</p> </publicationStmt> <sourceDesc> <p>No source: this is an original work.</p> </sourceDesc> </fileDesc> </teiHeader> <facsimile> <graphic url="page1.png"/> <graphic url="page2.png"/> <graphic url="page3.png"/> <graphic url="page4.png"/> </facsimile> </TEI></pre>
Schematron	<code><sch:ns prefix="tei" uri="http://www.tei-c.org/ns/1.0"/> <sch:ns prefix="xs" uri="http://www.w3.org/2001/XMLSchema"/></code>
Schematron	<code><sch:ns prefix="rng" uri="http://relaxng.org/ns/structure/1.0"/></code>
Content model	<pre><content> <sequence> <elementRef key="teiHeader"/> <alternate> <sequence> <classRef key="model.resource" minOccurs="1" maxOccurs="unbounded"/> <elementRef key="TEI" minOccurs="0" maxOccurs="unbounded"/> </sequence> <elementRef key="TEI" minOccurs="1" maxOccurs="unbounded"/> </alternate> </sequence> </content></pre>

Schema Declaration	<pre> element TEI { att.global.attributes, att.typed.attributes, attribute version { text }?, (teiHeader, ((model.resource+, TEI*) TEI+)) } </pre>
--------------------	--

11.1.2. <ab>

<ab> (anonymous block) contains any arbitrary component-level unit of text, acting as an anonymous container for phrase or inter level elements analogous to, but without the semantic baggage of, a paragraph. [16.3. Blocks, Segments, and Anchors]	
Module	linking
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.typed (@type, @subtype) att.declaring (@decls) att.fragmentable (@part) att.written (@hand)
Member of	model.pLike
Contained by	core: note q quote corpus: particDesc setting settingDesc header: availability change correspAction correspDesc encodingDesc handNote langUsage licence publicationStmt seriesStmt sourceDesc msdescription: accMat msDesc physDesc namesdates: event occupation org person place textcrit: lem rdg textstructure: back body div transcr: metamark
May contain	analysis: c cl interp interpGrp m pc phr s span spanGrp w core: add address bibl date del desc gap graphic hi label lb listBibl name note noteGrp pb ptr q quote ref rs term title header: idno linking: link linkGrp seg msdescription: msDesc objectType stamp namesdates: affiliation country forename geo listEvent listOrg listPerson listPlace location orgName persName placeName settlement surname textcrit: app listWit transcr: listTranspose metamark restore subst character data
Note	The <ab> element may be used at the encoder's discretion to mark any component-level elements in a text for which no other more specific appropriate markup is defined.
Example	<pre> <div type="book" n="Genesis"> <div type="chapter" n="1"> <ab>In the beginning God created the heaven and the earth.</ab> <ab>And the earth was without form, and void; and darkness was upon the face of the deep. And the spirit of God moved upon the face of the waters.</ab> <ab>And God said, Let there be light: and there was light.</ab> <!-- ...--> </div> </div> </pre>
Schematron	<s:report test="not(ancestor::tei:floatingText) and (ancestor::tei:p or ancestor::tei:ab) and not(parent::tei:exemplum parent::tei:item parent::tei:note parent::tei:q parent::tei:quote parent::tei:remarks parent::tei:said parent::tei:sp parent::tei:stage parent::tei:cell parent::tei:figure)"> Abstract model violation: ab may not occur inside paragraphs or other ab elements. </s:report>
Schematron	<s:report test="(ancestor::tei:l or ancestor::tei:lg) and not(parent::tei:figure or parent::tei:note or ancestor::tei:floatingText)"> Abstract model violation: Lines may not contain higher-level

	divisions such as p or ab, unless ab is a child of figure or note, or is a descendant of floating-Text. </s:report>
Content model	<pre><content> <macroRef key="macro.paraContent"/> </content></pre>
Schema Declaration	<pre>element ab { att.global.attributes, att.typed.attributes, att.declaring.attributes, att.fragmentable.attributes, att.written.attributes, macro.paraContent }</pre>

11.1.3. <accMat>

<accMat> (accompanying material) contains details of any significant additional material which may be closely associated with the manuscript or object being described, such as non-contemporaneous documents or fragments bound in with it at some earlier historical period. [10.7.3.3. Accompanying Material]	
Module	msdescription
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.typed</u> (@type, @subtype)
Member of	<u>model.physDescPart</u>
Contained by	msdescription: <u>physDesc</u>
May contain	analysis: <u>c</u> <u>cl</u> <u>interp</u> <u>interpGrp</u> <u>m</u> <u>pc</u> <u>phr</u> <u>s</u> <u>span</u> <u>spanGrp</u> <u>w</u> core: <u>add</u> <u>address</u> <u>bibl</u> <u>date</u> <u>del</u> <u>desc</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>label</u> <u>lb</u> <u>listBibl</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>p</u> <u>pb</u> <u>ptr</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>term</u> <u>title</u> header: <u>idno</u> linking: <u>ab</u> <u>link</u> <u>linkGrp</u> <u>seg</u> msdescription: <u>msDesc</u> <u>objectType</u> <u>stamp</u> namesdates: <u>affiliation</u> <u>country</u> <u>forename</u> <u>geo</u> <u>listEvent</u> <u>listOrg</u> <u>listPerson</u> <u>listPlace</u> <u>location</u> <u>orgName</u> <u>persName</u> <u>placeName</u> <u>settlement</u> <u>surname</u> textcrit: <u>app</u> <u>listWit</u> transcr: <u>listTranspose</u> <u>metamark</u> <u>restore</u> <u>subst</u> character data
Example	<pre><accMat>A copy of a tax form from 1947 is included in the envelope with the letter. It is not catalogued separately.</accMat></pre>
Content model	<pre><content> <macroRef key="macro.specialPara"/> </content></pre>
Schema Declaration	<pre>element accMat { att.global.attributes, att.typed.attributes, macro.specialPara }</pre>

11.1.4. <activity>

<activity> (activity) contains a brief informal description of what a participant in a language interaction is doing other than speaking, if anything. [15.2.3. The Setting Description]	
Module	corpus
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u>

	(@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source))
Member of	model.settingPart
Contained by	corpus: setting
May contain	analysis: interp interpGrp span spanGrp core: address date gap hi lb name note noteGrp pb ptr q ref rs term title header: idno linking: link linkGrp msdescription: objectType stamp namesdates: affiliation country forename geo location orgName persName placeName settlement surname textcrit: app transcr: listTranspose metamark subst character data
Note	For more fine-grained description of participant activities during a spoken text, the <code><event></code> element should be used.
Example	<code><activity>driving</activity></code>
Content model	<pre> <content> <macroRef key="macro.phraseSeq.limited"/> </content> </pre>
Schema Declaration	<pre> element activity { att.global.attributes, macro.phraseSeq.limited } </pre>

11.1.5. <add>

<add> (addition) contains letters, words, or phrases inserted in the source text by an author, scribe, or a previous annotator or corrector. [3.5.3. Additions, Deletions, and Omissions]	
Module	core
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.transcriptional</u> (@status, @cause, @seq) (<u>att.editLike</u> (@evidence, @instant)) (<u>att.written</u> (@hand)) <u>att.placement</u> (@place) <u>att.typed</u> (@type, @subtype) <u>att.dimensions</u> (@unit, @quantity, @extent, @precision, @scope) (<u>att.ranging</u> (@atLeast, @atMost, @min, @max, @confidence))
Member of	model.pPart.transcriptional
Contained by	analysis: cl pc phr s w core: add author bibl date del editor hi label name note p pubPlace publisher q quote ref rs street term title header: change handNote licence linking: ab seg msdescription: accMat objectType stamp namesdates: affiliation birth country death forename occupation orgName persName placeName settlement sex surname textcrit: lem rdg transcr: metamark restore subst
May contain	analysis: c cl interp interpGrp m pc phr s span spanGrp w core: add address bibl date del desc gap graphic hi label lb listBibl name note noteGrp pb ptr q quote ref rs term title header: idno linking: link linkGrp seg msdescription: msDesc objectType stamp namesdates: affiliation country forename geo listEvent listOrg listPerson listPlace location orgName persName placeName settlement surname textcrit: app listWit

	transcr: listTranspose metamark restore subst character data
Note	In a diplomatic edition attempting to represent an original source, the <add> element should not be used for additions to the current TEI electronic edition made by editors or encoders. In these cases, either the <corr> or <supplied> element are recommended. In a TEI edition of a historical text with previous editorial emendations in which such additions or reconstructions are considered part of the source text, the use of <add> may be appropriate, dependent on the editorial philosophy of the project.
Example	The story I am going to relate is true as to its main facts, and as to the consequences <add place="above"> of these facts </add> from which this tale takes its title.
Content model	<content> <macroRef key="macro.paraContent"/> </content>
Schema Declaration	<pre>element add { att.global.attributes, att.transcriptional.attributes, att.placement.attributes, att.typed.attributes, att.dimensions.attributes, macro.paraContent }</pre>

11.1.6. [<address>](#)

<address> (address) contains a postal address, for example of a publisher, an organization, or an individual. [3.6.2. Addresses 2.2.4. Publication, Distribution, Licensing, etc. 3.12.2.4. Imprint, Size of a Document, and Reprint Information]	
Module	core
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source))
Member of	model.addressLike model.publicationStmtPart.detail
Contained by	analysis: cl phr s span core: add author bibl date del desc editor hi label name note p pubPlace publisher q quote ref rs street term title corpus: activity channel constitution derivation domain factuality interaction locale preparedness purpose header: change classCode correspAction creation handNote language licence publicationStmt linking: ab seg msdescription: accMat objectType stamp namesdates: affiliation birth country death forename location occupation orgName persName placeName settlement sex surname textcrit: lem rdg witness transcr: metamark restore
May contain	analysis: interp interpGrp span spanGrp core: gap lb name note noteGrp pb postCode rs street header: idno linking: link linkGrp namesdates: country forename location orgName persName placeName settlement surname textcrit: app transcr: listTranspose metamark
Note	This element should be used for postal addresses only. Within it, the generic element <addrLine> may be used as an alternative to any of the more specialized elements available from the model.addrPart class, such as <street> , <postCode> etc.

Example	<p>Using just the elements defined by the core module, an address could be represented as follows:</p> <pre><address> <street>via Marsala 24</street> <postCode>40126</postCode> <name>Bologna</name> <name>Italy</name> </address></pre>
Example	<p>When a schema includes the names and dates module more specific elements such as country or settlement would be preferable over generic <code><name></code>:</p> <pre><address> <street>via Marsala 24</street> <postCode>40126</postCode> <settlement>Bologna</settlement> <country>Italy</country> </address></pre>
Example	<pre><address> <addrLine>Computing Center, MC 135</addrLine> <addrLine>P.O. Box 6998</addrLine> <addrLine>Chicago, IL 60680</addrLine> <addrLine>USA</addrLine> </address></pre>
Example	<pre><address> <country key="FR"/> <settlement type="city">Lyon</settlement> <postCode>69002</postCode> <district type="arrondissement">IIème</district> <district type="quartier">Perrache</district> <street> <num>30</num>, Cours de Verdun</street> </address></pre>
Content model	<pre><content> <sequence> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> <sequence minOccurs="1" maxOccurs="unbounded"> <classRef key="model.addrPart"/> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> </sequence> </sequence> </content></pre>
Schema Declaration	<pre>element address { att.global.attributes, (model.global*, (model.addrPart, model.global*)+) }</pre>

11.1.7. <affiliation>

<affiliation> (affiliation) contains an informal description of a person's present or past affiliation with some organization, for example an employer or sponsor. [15.2.2. The Participant Description]	
Module	namesdates
Attributes	<p>Attributes <code>att.global</code> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<code>att.global.rendition</code> (@rend, @style, @rendition)) (<code>att.global.linking</code> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<code>att.global.analytic</code> (@ana)) (<code>att.global.facs</code> (@facs)) (<code>att.global.change</code> (@change)) (<code>att.global.responsibility</code> (@cert, @resp)) (<code>att.global.source</code> (@source)) <code>att.editLike</code> (@evidence, @instant) <code>att.dataable</code> (@calendar, @period) (<code>att.dataable.w3c</code> (@when, @notBefore, @notAfter, @from, @to)) (<code>att.dataable.iso</code> (@when-iso, @notBefore-iso, @notAfter-iso, @from-iso, @to-iso)) (<code>att.dataable.custom</code> (@when-custom, @notBefore-custom, @notAfter-custom, @from-custom, @to-custom, @datingPoint, @datingMethod)) <code>att.naming</code> (@role, @nymRef) (<code>att.canonical</code> (@key, @ref)) <code>att.typed</code> (type, @subtype)</p> <p>type characterizes the element in some sense, using any convenient classification scheme or typology.</p> <p>Derived from <code>att.typed</code></p>

	<p>Status Optional</p> <p>Datatype teidata.enumerated</p> <p>Sample values include: sponsor</p> <p>recommend</p> <p>discredit</p> <p>pledged</p>
Member of	model.addressLike model.persStateLike

Note	<p>Particularly where cataloguing is likely to be based on the content of the header, it is advisable to use a generally recognized name authority file to supply the content for this element. The attributes <i>key</i> or <i>ref</i> may also be used to reference canonical information about the author(s) intended from any appropriate authority, such as a library catalogue or online resource.</p> <p>In the case of a broadcast, use this element for the name of the company or network responsible for making the broadcast.</p> <p>Where an author is unknown or unspecified, this element may contain text such as <i>Unknown</i> or <i>Anonymous</i>. When the appropriate TEI modules are in use, it may also contain detailed tagging of the names used for people, organizations or places, in particular where multiple names are given.</p>
Example	<pre> <author>British Broadcasting Corporation</author> <author>La Fayette, Marie Madeleine Pioche de la Vergne, comtesse de (1634-1693)</author> <author>Anonymous</author> <author>Bill and Melinda Gates Foundation</author> <author> <persName>Beaumont, Francis</persName> and <persName>John Fletcher</persName> </author> <author> <orgName key="BBC">British Broadcasting Corporation</orgName>: Radio 3 Network </author> </pre>
Content model	<pre> <content> <macroRef key="macro.phraseSeq"/> </content> </pre>
Schema Declaration	<pre> element author { att.global.attributes, att.naming.attributes, att.datable.attributes, macro.phraseSeq } </pre>

11.1.10. <availability>

<availability> (availability) supplies information about the availability of a text, for example any restrictions on its use or distribution, its copyright status, any licence applying to it, etc. [2.2.4. Publication, Distribution, Licensing, etc.]	
Module	header

Note	<p>This element should be used for deletion of shorter sequences of text, typically single words or phrases. The <delSpan> element should be used for longer sequences of text, for those containing structural subdivisions, and for those containing overlapping additions and deletions.</p> <p>The text deleted must be at least partially legible in order for the encoder to be able to transcribe it (unless it is restored in a <supplied> tag). Illegible or lost text within a deletion may be marked using the <gap> tag to signal that text is present but has not been transcribed, or is no longer visible. Attributes on the <gap> element may be used to indicate how much text is omitted, the reason for omitting it, etc. If text is not fully legible, the <unclear> element (available when using the additional tagset for transcription of primary sources) should be used to signal the areas of text which cannot be read with confidence in a similar way.</p>

	<p>Degrees of uncertainty over what can still be read, or whether a deletion was intended may be indicated by use of the <certainty> element (see 21. Certainty, Precision, and Responsibility).</p> <p>There is a clear distinction in the TEI between and <surplus> on the one hand and <gap> or <unclear> on the other. indicates a deletion present in the source being transcribed, which states the author's or a later scribe's intent to cancel or remove text. <surplus> indicates material present in the source being transcribed which should have been so deleted, but which is not in fact. <gap> or <unclear>, by contrast, signal an editor's or encoder's decision to omit something or their inability to read the source text. See sections 11.3.1.7. Text Omitted from or Supplied in the Transcription and 11.3.3.2. Use of the gap, del, damage, unclear, and supplied Elements in Combination for the relationship between these and other related elements used in detailed transcription.</p>
Example	<pre><l> <del rend="overtyped">Mein Frisch <del rend="overstrike" type="primary">schwebt weht der Wind </l></pre>
Example	<pre><del rend="overstrike"> <gap reason="illegible" quantity="5" unit="character"/> </pre>

11.1.36. <factuality>

<factuality> (factuality) describes the extent to which the text may be regarded as imaginative or non-imaginative, that is, as describing a fictional or a non-fictional world. [15.2.1. The Text Description]	
Module	corpus
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.typed (type, @subtype)
	<p>type categorizes the factuality of the text.</p> <p>Derived from att.typed</p> <p>Status Optional</p>

	<p>Datatype teidata.enumerated</p> <p>Legal values are: fiction the text is to be regarded as entirely imaginative</p> <p>fact the text is to be regarded as entirely informative or factual</p> <p>mixed the text contains a mixture of fact and fiction</p> <p>inapplicable the fiction/fact distinction is not regarded as helpful or appropriate to this text</p>
Member of	model.textDescPart
Contained by	corpus: textDesc
May contain	<p>analysis: interp interpGrp span spanGrp</p> <p>core: address date gap hi lb name note noteGrp pb ptr q ref rs term title</p> <p>header: idno</p> <p>linking: link linkGrp</p> <p>msdescription: objectType stamp</p> <p>namesdates: affiliation country forename geo location orgName persName placeName settlement surname</p> <p>textcrit: app</p> <p>transcr: listTranspose metamark subst</p> <p>character data</p>
Note	<p>Usually empty, unless some further clarification of the type attribute is needed, in which case it may contain running prose</p> <p>For many literary texts, a simple binary opposition between ‘fiction’ and ‘fact’ is naïve in the extreme; this parameter is not intended for purposes of subtle literary analysis, but as a simple means of characterizing the claimed fictiveness of a given text. No claim is made that works characterized as ‘fact’ are in any sense ‘true’.</p>
Example	<pre><factuality type="fiction"/></pre>
Example	<pre><factuality type="mixed">contains a mixture of gossip and speculation about real people and events</factuality></pre>
Content model	<pre><content> <macroRef key="macro.phraseSeq.limited"/> </content></pre>
Schema Declaration	<pre> element factuality { att.global.attributes, att.typed.attribute.subtype, attribute type { "fiction" "fact" "mixed" "inapplicable" }?, macro.phraseSeq.limited } </pre>

11.1.37. <fileDesc>

<fileDesc> (file description) contains a full bibliographic description of an electronic file. [2.2. The File Description 2.1.1. The TEI Header and Its Components]	
Module	header
Attributes	<p>Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source))</p>
Contained by	header: teiHeader

May contain	header: publicationStmt seriesStmt sourceDesc titleStmt
Note	The major source of information for those seeking to create a catalogue entry or bibliographic citation for an electronic file. As such, it provides a title and statements of responsibility together with details of the publication or distribution of the file, of any series to which it belongs, and detailed bibliographic notes for matters not addressed elsewhere in the header. It also contains a full bibliographic description for the source or sources from which the electronic text was derived.
Example	<pre> <fileDesc> <titleStmt> <title>The shortest possible TEI document</title> </titleStmt> <publicationStmt> <p>Distributed as part of TEI P5</p> </publicationStmt> <sourceDesc> <p>No print source exists: this is an original digital text</p> </sourceDesc> </fileDesc> </pre>
Content model	<pre> <content> <sequence> <sequence> <elementRef key="titleStmt"/> <elementRef key="editionStmt" minOccurs="0"/> <elementRef key="extent" minOccurs="0"/> <elementRef key="publicationStmt"/> <elementRef key="seriesStmt" minOccurs="0" maxOccurs="unbounded"/> <elementRef key="notesStmt" minOccurs="0"/> </sequence> <elementRef key="sourceDesc" minOccurs="1" maxOccurs="unbounded"/> </sequence> </content> </pre>
Schema Declaration	<pre> element fileDesc { att.global.attributes, ((titleStmt, editionStmt?, extent?, publicationStmt, seriesStmt*, notesStmt?), sourceDesc+) } </pre>

11.1.38. <forename>

<forename> (forename) contains a forename, given or baptismal name. [13.2.1. Personal Names]	
Module	namesdates

May contain	core: <u>desc</u>
Note	<p>The <code><gap></code>, <code><unclear></code>, and <code></code> core tag elements may be closely allied in use with the <code><damage></code> and <code><supplied></code> elements, available when using the additional tagset for transcription of primary sources. See section 11.3.3.2. Use of the gap, del, damage, unclear, and supplied Elements in Combination for discussion of which element is appropriate for which circumstance.</p> <p>The <code><gap></code> tag simply signals the editors decision to omit or inability to transcribe a span of text. Other information, such as the interpretation that text was deliberately erased or covered, should be indicated using the relevant tags, such as <code></code> in the case of deliberate deletion.</p>
Example	<pre><gap quantity="4" unit="chars" reason="illegible"/></pre>
Example	<pre><gap quantity="1" unit="essay" reason="sampling"/></pre>
Example	<pre> <gap atLeast="4" atMost="8" unit="chars" reason="illegible"/> </pre>

Example	<pre><gap extent="several lines" reason="lost"/></pre>
Content model	<pre><content> <alternate minOccurs="0" maxOccurs="unbounded"> <classRef key="model.descLike"/> <classRef key="model.certLike"/> </alternate> </content></pre>

<keywords> (keywords) contains a list of keywords or phrases identifying the topic or nature of a text. [2.4.3. The Text Classification]	
Module	header
Attributes	<p>Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source))</p> <p>scheme identifies the controlled vocabulary within which the set of keywords concerned is defined, for example by a taxonomy element, or by some other resource.</p> <p>Status Optional</p> <p>Datatype teidata.pointer</p>
Contained by	header: textClass
May contain	core: term
Note	<p>Each individual keyword (including compound subject headings) should be supplied as a term element directly within the keywords element. An alternative usage, in which each term appears within an item inside a list is permitted for backwards compatibility, but is deprecated.</p> <p>If no control list exists for the keywords used, then no value should be supplied for the <i>scheme</i> attribute.</p>

Example	<pre><keywords scheme="http://classificationweb.net"> <term>Babbage, Charles</term> <term>Mathematicians - Great Britain - Biography</term> </keywords></pre>
Example	<pre><keywords> <term>Fermented beverages</term> <term>Central Andes</term> <term>Schinus molle</term> <term>Molle beer</term> <term>Indigenous peoples</term> <term>Ethnography</term> <term>Archaeology</term> </keywords></pre>
Content model	<pre><content> <alternate> <elementRef key="term" minOccurs="1" maxOccurs="unbounded"/> <elementRef key="list"/> </alternate> </content></pre>
Schema Declaration	<pre>element keywords { att.global.attributes, attribute scheme { text }?, (term+ list) }</pre>

11.1.50. <label>

<p><label> (label) contains any label or heading used to identify part of a text, typically but not exclusively in a list or glossary. [3.8. Lists]</p>	
Module	core
Attributes	<p>Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.typed (@type, @subtype) att.placement (@place) att.written (@hand)</p>
Member of	model.labelLike
Contained by	<p>core: add del desc hi note p q quote ref title header: change hand Note licence linking: ab seg msdescription: accMat namesdates: event location occupation org place textcrit: lem rdg witness textstructure: body div transcr: metamark restore surface</p>
May contain	<p>analysis: c cl interp interpGrp m pc phr s span spanGrp w core: add address date del gap graphic hi lb name note noteGrp pb ptr q quote ref rs term title header: idno linking: link linkGrp seg msdescription: objectType stamp namesdates: affiliation country forename geo location orgName persName placeName settlement surname textcrit: app transcr: listTranspose metamark restore subst character data</p>
Example	<p>Labels are commonly used for the headwords in glossary lists; note the use of the global <i>xml:lang</i> attribute to set the default language of the glossary list to Middle English, and identify the glosses and headings as modern English or Latin:</p> <pre><list type="gloss" xml:lang="enm"> <head xml:lang="en">Vocabulary</head> <headLabel xml:lang="en">Middle English</headLabel></pre>

	<pre> <headItem xml:lang="en">New English</headItem> <label>nu</label> <item xml:lang="en">now</item> <label>lhude</label> <item xml:lang="en">loudly</item> <label>bloweth</label> <item xml:lang="en">blooms</item> <label>med</label> <item xml:lang="en">meadow</item> <label>wude</label> <item xml:lang="en">wood</item> <label>awe</label> <item xml:lang="en">ewe</item> <label>lhouth</label> <item xml:lang="en">lows</item> <label>sterteth</label> <item xml:lang="en">bounds, frisks (cf. <cit> <ref>Chaucer, K.T.644</ref> <quote>a courser, <term>sterting</term>as the fyr</quote> </cit> </item> <label>verteth</label> <item xml:lang="la">pedit</item> <label>murie</label> <item xml:lang="en">merrily</item> <label>swik</label> <item xml:lang="en">cease</item> <label>naver</label> <item xml:lang="en">never</item> </list> </pre>
Example	<p>Labels may also be used to record explicitly the numbers or letters which mark list items in ordered lists, as in this extract from Gibbon's <i>Autobiography</i>. In this usage the <code><label></code> element is synonymous with the <i>n</i> attribute on the <code><item></code> element:</p> <pre> I will add two facts, which have seldom occurred in the composition of six, or at least of five quartos. <list rend="runon" type="ordered"> <label>(1)</label> <item>My first rough manuscript, without any intermediate copy, has been sent to the press.</item> <label>(2) </label> <item>Not a sheet has been seen by any human eyes, excepting those of the author and the printer: the faults and the merits are exclusively my own.</item> </list> </pre>
Example	<p>Labels may also be used for other structured list items, as in this extract from the journal of Edward Gibbon:</p> <pre> <list type="gloss"> <label>March 1757.</label> <item>I wrote some critical observations upon Plautus.</item> <label>March 8th.</label> <item>I wrote a long dissertation upon some lines of Virgil.</item> <label>June.</label> <item>I saw Mademoiselle Curchod – <quote xml:lang="la">Omnia vincit amor, et nos cedamus amori.</quote> </item> <label>August.</label> <item>I went to Crassy, and staid two days.</item> </list> </pre> <p>Note that the <code><label></code> might also appear within the <code><item></code> rather than as its sibling. Though syntactically valid, this usage is not recommended TEI practice.</p>
Example	<p>Labels may also be used to represent a label or heading attached to a paragraph or sequence of paragraphs not treated as a structural division, or to a group of verse lines. Note that, in this case, the <code><label></code> element appears <i>within</i> the <code><p></code> or <code><lg></code> element, rather than as a preceding sibling of it.</p> <pre> <p>[...] <lb/>&#x2013; n'entrer en mauuais &#x2013; mal-heu- <lb/>r�� me#nage. Or des que le con#ente- <lb/>ment des parties y e#t le mariage e#t <lb/> arre#t��, quoy que de faict il ne #oit <label place="margin">Pui##ance maritale entre les Romains.</label> <lb/> con#omm��. Depuis la con#omma- <lb/>tion du mariage la femme e#t #oubs <lb/> la pui##ance du mary, s'il n'e#t e#cla- <lb/>ue ou enfant de famille : car en ce <lb/>cas, la femme, qui a e#pou�� vn en- <lb/>fant de famille, e#t #ous la pui##ance [...]</p> </pre> <p>In this example the text of the label appears in the right hand margin of the original source, next to the paragraph it describes, but approximately in the middle of it. If so desired the <i>type</i> attribute may be used to distinguish different categories of label.</p>

Content model	<pre><content> <macroRef key="macro.phraseSeq"/> </content></pre>
Schema Declaration	<pre>element label { att.global.attributes, att.typed.attributes, att.placement.attributes, att.written.attributes, macro.phraseSeq }</pre>

11.1.51. <langUsage>

<langUsage> (language usage) describes the languages, sublanguages, registers, dialects, etc. represented within a text. [2.4.2. Language Usage 2.4. The Profile Description 15.3.2. Declarable Elements]	
Module	header
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.declarable (@default)
Member of	model.profileDescPart
Contained by	header: profileDesc
May contain	core: p header: language linking: ab
Example	<pre><langUsage> <language ident="fr-CA" usage="60">Québécois</language> <language ident="en-CA" usage="20">Canadian business English</language> <language ident="en-GB" usage="20">British English</language> </langUsage></pre>

Schema Declaration	<pre>element language { att.global.attributes, attribute ident { text }, attribute usage { text }?, macro.phraseSeq.limited }</pre>

11.1.53. <lb>

<lb> (line beginning) marks the beginning of a new (typographic) line in some edition or version of a text. [3.11.3. Milestone Elements 7.2.5. Speech Contents]	
Module	core
Attributes	<p>Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) (att.typed (@type, @subtype)) (att.edition (@ed, @edRef)) (att.spanning (@spanTo)) (att.breaking (@break))</p>
Member of	model.milestoneLike
Contained by	<p>analysis: cl m phr s span w</p> <p>core: add address author bibl date del editor hi label listBibl name note p pubPlace publisher q quote ref rs street term title</p> <p>corpus: activity channel constitution derivation domain factuality interaction locale preparedness purpose</p> <p>header: change classCode handNote language licence</p> <p>linking: ab seg</p> <p>msdescription: accMat objectType stamp</p> <p>namesdates: affiliation birth country death forename occupation org orgName persName person placeName settlement sex surname</p> <p>textcrit: lem rdg</p> <p>textstructure: back body div text</p> <p>transcr: metamark restore subst surface surfaceGrp</p>

May contain	Empty element
Note	<p>By convention, <code><lb></code> elements should appear at the point in the text where a new line starts. The <i>n</i> attribute, if used, indicates the number or other value associated with the text between this point and the next <code><lb></code> element, typically the sequence number of the line within the page, or other appropriate unit. This element is intended to be used for marking actual line breaks on a manuscript or printed page, at the point where they occur; it should not be used to tag structural units such as lines of verse (for which the <code><l></code> element is available) except in circumstances where structural units cannot otherwise be marked.</p> <p>The <i>type</i> attribute may be used to characterize the line break in any respect. The more specialized attributes <i>break</i>, <i>ed</i>, or <i>edRef</i> should be preferred when the intent is to indicate whether or not the line break is word-breaking, or to note the source from which it derives.</p>
Example	<p>This example shows typographical line breaks within metrical lines, where they occur at different places in different editions:</p> <pre><l>Of Mans First Disobedience,<lb ed="1674"/> and<lb ed="1667"/> the Fruit</l> <l>Of that Forbidden Tree, whose<lb ed="1667 1674"/> mortal tast</l> <l>Brought Death into the World,<lb ed="1667"/> and all<lb ed="1674"/> our woe,</l></pre>
Example	<p>This example encodes typographical line breaks as a means of preserving the visual appearance of a title page. The <i>break</i> attribute is used to show that the line break does not (as elsewhere) mark the start of a new word.</p> <pre><titlePart> <lb/>With Additions, ne<lb break="no"/>ver before Printed. </titlePart></pre>
Content model	<pre><content> <empty/> </content></pre>
Schema Declaration	<pre>element lb { att.global.attributes, att.typed.attributes, att.edition.attributes, att.spanning.attributes, att.breaking.attributes, empty }</pre>

11.1.54. `<lem>`

<code><lem></code> (lemma) contains the lemma, or base text, of a textual variation. [12.1. The Apparatus Entry, Readings, and Witnesses]	
Module	textcrit
Attributes	<p>Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.textCritical</u> (@type, @cause, @varSeq, @require) (<u>att.written</u> (@hand)) <u>att.witnessed</u> (@wit)</p>
Contained by	textcrit: app
May contain	<p>analysis: <u>c</u> <u>cl</u> <u>interp</u> <u>interpGrp</u> <u>m</u> <u>pc</u> <u>phr</u> <u>s</u> <u>span</u> <u>spanGrp</u> <u>w</u> core: <u>add</u> <u>address</u> <u>bibl</u> <u>date</u> <u>del</u> <u>desc</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>label</u> <u>lb</u> <u>listBibl</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>p</u> <u>pb</u> <u>ptr</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>term</u> <u>title</u> header: <u>idno</u> linking: <u>ab</u> <u>link</u> <u>linkGrp</u> <u>seg</u> msdescription: <u>msDesc</u> <u>objectType</u> <u>stamp</u> namesdates: <u>affiliation</u> <u>country</u> <u>forename</u> <u>geo</u> <u>listEvent</u> <u>listOrg</u> <u>listPerson</u> <u>listPlace</u> <u>location</u> <u>orgName</u> <u>persName</u> <u>placeName</u> <u>settlement</u> <u>surname</u> textcrit: app <u>listWit</u> textstructure: <u>div</u> transcr: <u>listTranspose</u> <u>metamark</u> <u>restore</u> <u>subst</u> character data</p>
Note	The term <i>lemma</i> is used in text criticism to describe the reading given in the main text, which may be used as a heading in the apparatus itself. This usage connects it to mathemat-

	ics (where a lemma is a proven proposition used as a step in a proof, a "given") and natural-language processing (where a lemma is the dictionary headword associated with an inflected form in the running text).
Example	<pre> <app> <lem wit="#E1 #Hg">Experience</lem> <rdg wit="#La" type="substantive">Experiment</rdg> <rdg wit="#Ra2" type="substantive">Eryment</rdg> </app> </pre>

11.1.64. <listWit>

<p><listWit> (witness list) lists definitions for all the witnesses referred to by a critical apparatus, optionally grouped hierarchically. [12.1. The Apparatus Entry, Readings, and Witnesses]</p>	
Module	textcrit
Attributes	<p>Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.sortable (@sortKey)</p>
Member of	model.listLike
Contained by	<p>core: add del desc hi note p q quote ref title header: change handNote licence sourceDesc linking: ab seg msdescription: accMat namesdates: occupation textcrit: lem listWit rdg witness textstructure: back body div transcr: metamark restore</p>
May contain	<p>core: desc textcrit: listWit witness</p>
Note	<p>May contain a series of <witness> or <listWit> elements.</p> <p>The provision of a <listWit> element simplifies the automatic processing of the apparatus, e.g. the reconstruction of the readings for all witnesses from an exhaustive apparatus.</p> <p>Situations commonly arise where there are many more or less fragmentary witnesses, such that there may be quite distinct groups of witnesses for different parts of a text or collection of texts. Such groups may be given separately, or nested within a single <listWit> element at the beginning of the file listing all the witnesses, partial and complete, for the text, with the attestation of fragmentary witnesses indicated within the apparatus by use of the <witStart> and <witEnd> elements described in section 12.1.5. Fragmentary Witnesses.</p> <p>Note however that a given witness can only be defined once, and can therefore only appear within a single <listWit> element.</p>
Example	<pre><listWit> <witness xml:id="HL26">Ellesmere, Huntingdon Library 26.C.9</witness> <witness xml:id="PN392">Hengwrt, National Library of Wales, Aberystwyth, Peniarth 392D</witness> <witness xml:id="RP149">Bodleian Library Rawlinson Poetic 149 (see further <ptr target="#MSRP149"/></witness> </listWit></pre>

<msDesc> (manuscript description) contains a description of a single identifiable manuscript or other text-bearing object such as early printed books. [10.1. Overview]	
Module	msdescription
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.sortable (@sortKey) att.typed (@type, @subtype) att.declaring (@decls) att.docStatus (@status)
Member of	model.biblLike
Contained by	core: add del desc hi listBibl note p q quote ref title header: change handNote licence sourceDesc linking: ab seg msdescription: accMat namesdates: event location occupation org person place textcrit: lem rdg witness textstructure: body div transcr: metamark restore
May contain	core: p linking: ab msdescription: physDesc
Note	Although the <msDesc> has primarily been designed with a view to encoding manuscript descriptions, it may also be used for other objects such as early printed books, fascicles, epigraphs, or any text-bearing objects that require substantial description. If an object is not text-bearing or the reasons for describing the object is not primarily the textual content, the more general <object> may be more suitable.
Example	<pre> <msDesc> <msIdentifier> <settlement>Oxford</settlement> <repository>Bodleian Library</repository> <idno type="Bod">MS Poet. Rawl. D. 169.</idno> </msIdentifier> <msContents> <msItem> <author>Geoffrey Chaucer</author> <title>The Canterbury Tales</title> </msItem> </msContents> <physDesc> <objectDesc> <p>A parchment codex of 136 folios, measuring approx 28 by 19 inches, and containing 24 quires.</p> <p>The pages are margined and ruled throughout.</p> <p>Four hands have been identified in the manuscript: the first 44 folios being written in two cursive anglicana scripts, while the remainder is for the most part in a mixed secretary hand.</p> </objectDesc> </physDesc> </msDesc> </pre>
Content model	<pre> <content> <sequence> <elementRef key="msIdentifier"/> <classRef key="model.headLike" minOccurs="0" maxOccurs="unbounded"/> <alternate> <classRef key="model.pLike" minOccurs="1" maxOccurs="unbounded"/> </alternate> <sequence> <elementRef key="msContents" minOccurs="0"/> <elementRef key="physDesc" minOccurs="0"/> <elementRef key="history" minOccurs="0"/> <elementRef key="additional" </pre>

	<pre> minOccurs="0"/> <alternate> <elementRef key="msPart" minOccurs="0" maxOccurs="unbounded"/> <elementRef key="msFrag" minOccurs="0" maxOccurs="unbounded"/> </alternate> </sequence> </alternate> </sequence> </content> </pre>

	transcr: list Transpose metamark restore subst character data
Example	<p>In the following example, the translator has supplied a footnote containing an explanation of the term translated as "painterly":</p> <pre> And yet it is not only in the great line of Italian renaissance art, but even in the painterly <note place="bottom" type="gloss" resp="#MDMH"> <term xml:lang="de">Malerisch</term>. This word has, in the German, two distinct meanings, one objective, a quality residing in the object, the other subjective, a mode of apprehension and creation. To avoid confusion, they have been distinguished in English as <mentioned>picturesque</mentioned> and <mentioned>painterly</mentioned> respectively. </note> style of the Dutch genre painters of the seventeenth century that drapery has this psychological significance. <!-- elsewhere in the document --> <respStmt xml:id="MDMH"> <resp>translation from German to English</resp> <name>Hottinger, Marie Donald Mackie</name> </respStmt> </pre> <p>For this example to be valid, the code MDMH must be defined elsewhere, for example by means of a responsibility statement in the associated TEI header.</p>
Example	<p>The global <i>n</i> attribute may be used to supply the symbol or number used to mark the note's point of attachment in the source text, as in the following example:</p> <pre> Mevorakh b. Saadya's mother, the matriarch of the family during the second half of the eleventh century, <note n="126" anchored="true"> The alleged mention of Judah Nagid's mother in a letter from 1071 is, in fact, a reference to Judah's children; cf. above, nn. 111 and 54. </note> is well known from Geniza documents published by Jacob Mann. </pre> <p>However, if notes are numbered in sequence and their numbering can be reconstructed automatically by processing software, it may well be considered unnecessary to record the note numbers.</p>
Content model	<pre> <content> <macroRef key="macro.specialPara"/> </content> </pre>
Schema Declaration	<pre> element note { att.global.attributes, att.placement.attributes, att.pointing.attributes, att.typed.attributes, att.written.attributes, att.anchoring.attributes, macro.specialPara } </pre>

11.1.72. <noteGrp>

<noteGrp> contains a group of notes [3.9.1.1. Encoding Grouped Notes]

--	---

11.1.79. <pb>

<pb> (page beginning) marks the beginning of a new page in a paginated document. [3.11.3. Milestone Elements]	
Module	core
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.typed (@type, @subtype) att.edition (@ed, @edRef) att.spanning (@spanTo) att.breaking (@break)
Member of	model.milestoneLike
Contained by	analysis: cl m phr s span w core: add address author bibl date del editor hi label listBibl name note p pubPlace publisher q quote ref rs street term title corpus: activity channel constitution derivation domain factuality interaction locale preparedness purpose header: change classCode handNote language licence linking: ab seg msdescription: accMat objectType stamp namesdates: affiliation birth country death forename occupation org orgName persName person placeName settlement sex surname textcrit: lem rdg textstructure: back body div text transcr: metamark restore subst surface surfaceGrp
May contain	Empty element
Note	<p>A <pb> element should appear at the start of the page which it identifies. The global <i>n</i> attribute indicates the number or other value associated with this page. This will normally be the page number or signature printed on it, since the physical sequence number is implicit in the presence of the <pb> element itself.</p> <p>The <i>type</i> attribute may be used to characterize the page break in any respect. The more specialized attributes <i>break</i>, <i>ed</i>, or <i>edRef</i> should be preferred when the intent is to indicate whether or not the page break is word-breaking, or to note the source from which it derives.</p>
Example	<p>Page numbers may vary in different editions of a text.</p> <pre> <p> ... <pb n="145" ed="ed2"/> <!-- Page 145 in edition "ed2" starts here --> ... <pb n="283" ed="ed1"/> <!-- Page 283 in edition "ed1" starts here--> ... </p> </pre>
Example	<p>A page break may be associated with a facsimile image of the page it introduces by means of the <i>facs</i> attribute</p> <pre> <body> <pb n="1" facs="page1.png"/> <!-- page1.png contains an image of the page; the text it contains is encoded here --> <p> <!-- ... --> </p> <pb n="2" facs="page2.png"/> <!-- similarly, for page 2 --> <p> <!-- ... --> </p> </body> </pre>
Content model	<pre> <content> <empty/> </content> </pre>
Schema Declaration	<pre> element pb { att.global.attributes, </pre>

```

att.typed.attributes,
att.edition.attributes,
att.spanning.attributes,

11.1.92. <publicationStmt>

<publicationStmt> (publication statement) groups information concerning the publication or distribution of an electronic or other text. [2.2.4. Publication, Distribution, Licensing, etc. 2.2. The File Description]

Module	header
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source))
Contained by	header: <u>fileDesc</u>
May contain	core: <u>address</u> <u>date</u> <u>p</u> <u>ptr</u> <u>pubPlace</u> <u>publisher</u> <u>ref</u> header: <u>availability</u> <u>idno</u> linking: <u>ab</u>
Note	Where a publication statement contains several members of the <code>model.publicationStmtPart.agency</code> or <code>model.publicationStmtPart.detail</code> classes rather than one or more paragraphs or anonymous blocks, care should be taken to ensure that the repeated elements are presented in a meaningful order. It is a conformance requirement that elements supplying information about publication place, address, identifier, availability, and date be given following the name of the publisher, distributor, or authority concerned, and preferably in that order.
Example	<pre> <publicationStmt> <publisher>C. Muquardt </publisher> <pubPlace>Bruxelles & Leipzig</pubPlace> <date when="1846"/> </publicationStmt> </pre>
Example	<pre> <publicationStmt> <publisher>Chadwyck Healey</publisher> <pubPlace>Cambridge</pubPlace> <availability> <p>Available under licence only</p> </availability> <date when="1992">1992</date> </publicationStmt> </pre>
Example	<pre> <publicationStmt> <publisher>Zea Books</publisher> <pubPlace>Lincoln, NE</pubPlace> <date>2017</date> <availability> <p>This is an open access work licensed under a Creative Commons Attribution 4.0 International license.</p> </availability> <ptr target="http://digitalcommons.unl.edu/zeabook/55"/> </publicationStmt> </pre>
Content model	<pre> <content> <alternate> <sequence minOccurs="1" maxOccurs="unbounded"> <classRef key="model.publicationStmtPart.agency"/> <classRef key="model.publicationStmtPart.detail" minOccurs="0" maxOccurs="unbounded"/> </sequence> <classRef key="model.pLike" minOccurs="1" maxOccurs="unbounded"/> </alternate> </content> </pre>
Schema Declaration	<pre> element publicationStmt { att.global.attributes, ((model.publicationStmtPart.agency, model.publicationStmtPart.detail*)+ model.pLike+) } </pre>

11.1.93. <publisher>

<publisher> (publisher) provides the name of the organization responsible for the publication or distribution of a bibliographic item. [3.12.2.4. Imprint, Size of a Document, and Reprint Information 2.2.4. Publication, Distribution, Licensing, etc.]	
Module	core
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.canonical</u> (@key, @ref)

11.1.94. <purpose>

<purpose> characterizes a single purpose or communicative function of the text. [15.2.1. The Text Description]	
Module	corpus
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.typed</u> (type, @subtype) type specifies a particular kind of purpose. Derived from <u>att.typed</u> Status Optional Datatype <u>teidata.enumerated</u>

	<p>Suggested values include:</p> <p>per-suade didactic, advertising, propaganda, etc.</p> <p>ex-press self expression, confessional, etc.</p> <p>in-form convey information, educate, etc.</p> <p>en-ter-tain amuse, entertain, etc.</p> <p>degree specifies the extent to which this purpose predominates.</p> <p>Status Optional</p> <p>Datatype <u>teidata.certainty</u></p> <p>Note Values should be interpreted as follows.</p> <p>high this purpose is predominant</p> <p>medium this purpose is intermediate</p> <p>low this purpose is weak</p> <p>unknown extent unknown</p>
Contained by	corpus: <u>textDesc</u>
May contain	<p>analysis: <u>interp</u> <u>interpGrp</u> <u>span</u> <u>spanGrp</u></p> <p>core: <u>address</u> <u>date</u> <u>gap</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>pb</u> <u>ptr</u> <u>q</u> <u>ref</u> <u>rs</u> <u>term</u> <u>title</u></p> <p>header: <u>idno</u></p> <p>linking: <u>link</u> <u>linkGrp</u></p> <p>msdescription: <u>objectType</u> <u>stamp</u></p> <p>namesdates: <u>affiliation</u> <u>country</u> <u>forename</u> <u>geo</u> <u>location</u> <u>orgName</u> <u>persName</u> <u>placeName</u> <u>settlement</u> <u>surname</u></p> <p>textcrit: <u>app</u></p> <p>transcr: <u>listTranspose</u> <u>metamark</u> <u>subst</u></p> <p>character data</p>
Note	Usually empty, unless some further clarification of the type attribute is needed, in which case it may contain running prose
Example	<pre><purpose type="persuade" degree="high"/> <purpose type="entertain" degree="low"/></pre>
Content model	<pre><content> <macroRef key="macro.phraseSeq.limited"/> </content></pre>
Schema Declaration	<pre>element purpose { att.global.attributes, att.typed.attribute.subtype, attribute type { "persuade" "express" "inform" "entertain" }?, attribute degree { text }?, macro.phraseSeq.limited }</pre>

11.1.95. <q>

<q> (quoted) contains material which is distinguished from the surrounding text using quotation marks or a similar method, for any one of a variety of reasons including, but not limited to: direct speech or thought, technical terms or jargon, authorial distance, quotations from elsewhere, and passages that are mentioned but not used. [3.3.3. Quotation]	
Module	core
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs,

	<p>@copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.ascribed.directed</u> (@toWhom) (<u>att.ascribed</u> (@who))</p> <p>type (type) may be used to indicate whether the offset passage is spoken or thought, or to characterize it more finely.</p> <p>Status Optional</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Suggested values include: spoken (spoken) representation of speech</p> <p>thought (thought) representation of thought, e.g. internal monologue</p> <p>written (written) quotation from a written source</p> <p>so-called (so called) authorial distance</p> <p>foreign (foreign)</p> <p>distinct (distinct) linguistically distinct</p> <p>term technical term</p> <p>emph (emph) rhetorically emphasized</p> <p>mentioned (mentioned) referring to itself, not its normal referent</p>
Member of	<u>model.common</u> <u>model.hiLike</u>
Contained by	<p>analysis: <u>cl</u> <u>m</u> <u>phr</u> <u>s</u> <u>span</u> <u>w</u></p> <p>core: <u>add</u> <u>author</u> <u>bibl</u> <u>date</u> <u>del</u> <u>desc</u> <u>editor</u> <u>hi</u> <u>label</u> <u>name</u> <u>note</u> <u>p</u> <u>pubPlace</u> <u>publisher</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>street</u> <u>term</u> <u>title</u></p> <p>corpus: <u>activity</u> <u>channel</u> <u>constitution</u> <u>derivation</u> <u>domain</u> <u>factuality</u> <u>interaction</u> <u>locale</u> <u>preparedness</u> <u>purpose</u></p> <p>header: <u>change</u> <u>classCode</u> <u>creation</u> <u>handNote</u> <u>language</u> <u>licence</u></p> <p>linking: <u>ab</u> <u>seg</u></p> <p>msdescription: <u>accMat</u> <u>objectType</u> <u>stamp</u></p> <p>namesdates: <u>affiliation</u> <u>birth</u> <u>country</u> <u>death</u> <u>forename</u> <u>occupation</u> <u>orgName</u> <u>persName</u> <u>placeName</u> <u>settlement</u> <u>sex</u> <u>surname</u></p> <p>textcrit: <u>lem</u> <u>rdg</u> <u>witness</u></p> <p>textstructure: <u>body</u> <u>div</u></p> <p>transcr: <u>metamark</u> <u>restore</u></p>
May contain	<p>analysis: <u>c</u> <u>cl</u> <u>interp</u> <u>interpGrp</u> <u>m</u> <u>pc</u> <u>phr</u> <u>s</u> <u>span</u> <u>spanGrp</u> <u>w</u></p> <p>core: <u>add</u> <u>address</u> <u>bibl</u> <u>date</u> <u>del</u> <u>desc</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>label</u> <u>lb</u> <u>listBibl</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>p</u> <u>pb</u> <u>ptr</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>term</u> <u>title</u></p> <p>header: <u>idno</u></p> <p>linking: <u>ab</u> <u>link</u> <u>linkGrp</u> <u>seg</u></p> <p>msdescription: <u>msDesc</u> <u>objectType</u> <u>stamp</u></p> <p>namesdates: <u>affiliation</u> <u>country</u> <u>forename</u> <u>geo</u> <u>listEvent</u> <u>listOrg</u> <u>listPerson</u> <u>listPlace</u> <u>location</u> <u>orgName</u> <u>persName</u> <u>placeName</u> <u>settlement</u> <u>surname</u></p> <p>textcrit: <u>app</u> <u>listWit</u></p> <p>transcr: <u>listTranspose</u> <u>metamark</u> <u>restore</u> <u>subst</u></p> <p>character data</p>
Note	May be used to indicate that a passage is distinguished from the surrounding text for reasons concerning which no claim is made. When used in this manner, <q> may be thought of as

	syntactic sugar for <code><hi></code> with a value of <i>rend</i> that indicates the use of such mechanisms as quotation marks.
Example	It is spelled <code><q>Tübingen</q></code> – to enter the letter <code><q>u</q></code> with an umlaut hold down the <code><q>option</q></code> key and press <code><q>0 0 f c</q></code>
Content model	<pre><content> <macroRef key="macro.specialPara"/> </content></pre>
Schema Declaration	<pre>element q { att.global.attributes, att.ascribed.directed.attributes, attribute type { "spoken" "thought" "written" "soCalled" "foreign" "distinct" "term" "emph" "mentioned" }, macro.specialPara }</pre>

11.1.96. `<quote>`

<code><quote></code> (quotation) contains a phrase or passage attributed by the narrator or author to some agency external to the text. [3.3.3. Quotation 4.3.1. Grouped Texts]	
Module	core
Attributes	Attributes <code>att.global</code> (<code>@xml:id</code> , <code>@n</code> , <code>@xml:lang</code> , <code>@xml:base</code> , <code>@xml:space</code>) (<code>att.global.rendition</code> (<code>@rend</code> , <code>@style</code> , <code>@rendition</code>)) (<code>att.global.linking</code> (<code>@corresp</code> , <code>@synch</code> , <code>@sameAs</code> , <code>@copyOf</code> , <code>@next</code> , <code>@prev</code> , <code>@exclude</code> , <code>@select</code>)) (<code>att.global.analytic</code> (<code>@ana</code>)) (<code>att.global.facs</code> (<code>@facs</code>)) (<code>att.global.change</code> (<code>@change</code>)) (<code>att.global.responsibility</code> (<code>@cert</code> , <code>@resp</code>)) (<code>att.global.source</code> (<code>@source</code>)) <code>att.typed</code> (<code>@type</code> , <code>@subtype</code>) <code>att.msExcerpt</code> (<code>@defective</code>) <code>att.notated</code> (<code>@notation</code>)

Note	<p>The <code><s></code> element may be used to mark orthographic sentences, or any other segmentation of a text, provided that the segmentation is end-to-end, complete, and non-nesting. For segmentation which is partial or recursive, the <code><seg></code> should be used instead.</p> <p>The <i>type</i> attribute may be used to indicate the type of segmentation intended, according to any convenient typology.</p>
Example	<pre><head> <s>A short affair</s> </head> <s>When are you leaving?</s> <s>Tomorrow.</s></pre>
Schematron	<pre><s:report test="tei:s">You may not nest one s element within another: use seg instead</s:report></pre>
Content model	<pre><content> <macroRef key="macro.phraseSeq"/> </content></pre>
Schema Declaration	<pre>element s { att.global.attributes, att.segLike.attributes, att.typed.attributes, att.notated.attributes, macro.phraseSeq }</pre>

11.1.103. <seg>

<seg> (arbitrary segment) represents any segmentation of text below the ‘chunk’ level. [16.3. Blocks, Segments, and Anchors 6.2. Components of the Verse Line 7.2.5. Speech Contents]	
Module	linking
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.segLike (@function) (att.datcat (@datcat, @valueDatcat)) (att.fragmentable (@part)) att.typed (@type, @subtype) att.written (@hand) att.notated (@notation)
Member of	model.segLike
Contained by	analysis: cl m phr s w core: add author bibl date del editor hi label name note p pubPlace publisher q quote ref rs street term title header: change handNote licence linking: ab seg msdescription: accMat objectType stamp namesdates: affiliation birth country death forename occupation orgName persName place-Name settlement sex surname textcrit: lem rdg

	transcr: metamark restore
May contain	analysis: c cl interp interpGrp m pc phr s span spanGrp w core: add address bibl date del desc gap graphic hi label lb listBibl name note noteGrp pb ptr q quote ref rs term title header: idno linking: link linkGrp seg msdescription: msDesc objectType stamp namesdates: affiliation country forename geo listEvent listOrg listPerson listPlace location orgName persName placeName settlement surname textcrit: app listWit transcr: listTranspose metamark restore subst character data
Note	The <code><seg></code> element may be used at the encoder's discretion to mark any segments of the text of interest for processing. One use of the element is to mark text features for which no appropriate markup is otherwise defined. Another use is to provide an identifier for some segment which is to be pointed at by some other element—i.e. to provide a target, or a part of a target, for a <code><ptr></code> or other similar element.
Example	<pre><seg>When are you leaving?</seg> <seg>Tomorrow.</seg></pre>
Example	<pre><s> <seg rend="caps" type="initial-cap">So father's only</seg> glory was the ballfield. </s></pre>
Example	<pre><seg type="preamble"> <seg>Sigmund, <seg type="patronym">the son of Volsung</seg>, was a king in Frankish country.</seg> <seg>Sinfiotli was the eldest of his sons ...</seg> <seg>Borghild, Sigmund's wife, had a brother ... </seg> </seg></pre>

Note	<p>When this element appears within an <index> element, it is understood to supply the form under which an index entry is to be made for that location. Elsewhere, it is understood simply to indicate that its content is to be regarded as a technical or specialised term. It may be associated with a <gloss> element by means of its <i>ref</i> attribute; alternatively a <gloss> element may point to a <term> element by means of its <i>target</i> attribute.</p> <p>In formal terminological work, there is frequently discussion over whether terms must be atomic or may include multi-word lexical items, symbolic designations, or phraseological units. The <term> element may be used to mark any of these. No position is taken on the philosophical issue of what a term can be; the looser definition simply allows the <term> element to be used by practitioners of any persuasion.</p> <p>As with other members of the att.canonical class, instances of this element occurring in a text may be associated with a canonical definition, either by means of a URI (using the <i>ref</i> attribute), or by means of some system-specific code value (using the <i>key</i> attribute). Because the mutually exclusive <i>target</i> and <i>cRef</i> attributes overlap with the function of the <i>ref</i> attribute, they are deprecated and may be removed at a subsequent release.</p>
Example	<pre> A computational device that infers structure from grammatical strings of words is known as a <term>parser</term>, and much of the history of NLP over the last 20 years has been occupied with the design of parsers. </pre>

Example	We may define <term xml:id="TDPV1" rend="sc">discoursal point of view</term> as <gloss target="#TDPV1">the relationship, expressed through discourse structure, between the implied author or some other addresser, and the fiction.</gloss>
Example	We may define <term ref="#TDPV2" rend="sc">discoursal point of view</term> as <gloss xml:id="TDPV2">the relationship, expressed through discourse structure, between the implied author or some other addresser, and the fiction.</gloss>
Example	We discuss Leech's concept of <term ref="myGlossary.xml#TDPV2" rend="sc">discoursal point of view</term> below.
Content model	<content> <macroRef key="macro.phraseSeq"/> </content>
Schema Declaration	<pre> element term { att.global.attributes, att.declaring.attributes, att.pointing.attributes, att.typed.attributes, att.canonical.attributes, att.sortable.attributes, att.cReferencing.attributes, macro.phraseSeq } </pre>

11.1.120. <text>

<text> (text) contains a single text of any kind, whether unitary or composite, for example a poem or drama, a collection of essays, a novel, a dictionary, or a corpus sample. [4. Default Text Structure 15.1. Varieties of Composite Text]	
Module	textstructure
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.declaring (@decls) att.typed (@type, @subtype) att.written (@hand)
Member of	model.resource
Contained by	textstructure: TEI
May contain	analysis: interp interpGrp span spanGrp core: gap lb note noteGrp pb linking: link linkGrp textcrit: app textstructure: back body transcr: listTranspose metamark
Note	This element should not be used to represent a text which is inserted at an arbitrary point within the structure of another, for example as in an embedded or quoted narrative; the <floatingText> is provided for this purpose.
Example	<pre> <text> <front> <docTitle> <titlePart>Autumn Haze</titlePart> </docTitle> </front> <body> <l>Is it a dragonfly or a maple leaf</l> <l>That settles softly down upon the water?</l> </body> </text> </pre>
Example	<p>The body of a text may be replaced by a group of nested texts, as in the following schematic:</p> <pre> <text> <front> <!-- front matter for the whole group --> </front> <group> <text> <!-- first text --> </text> <text> </pre>

	<pre> <!-- second text --> </text> </group> </text> </pre>
Content model	<pre> <content> <sequence> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> <sequence minOccurs="0"> <elementRef key="front"/> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> </sequence> <alternate> <elementRef key="body"/> <elementRef key="group"/> </alternate> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> <sequence minOccurs="0"> <elementRef key="back"/> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> </sequence> </sequence> </content> </pre>
Schema Declaration	<pre> element text { att.global.attributes, att.declaring.attributes, att.typed.attributes, att.written.attributes, (model.global*, (front, model.global*)?, (body group), model.global*, (back, model.global*)?) } </pre>

11.1.121. <textClass>

<textClass> (text classification) groups information which describes the nature or topic of a text in terms of a standard classification scheme, thesaurus, etc. [2.4.3. The Text Classification]	
Module	header
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.declarable (@default)
Member of	model.profileDescPart
Contained by	header: profileDesc
May contain	header: classCode keywords
Example	<pre> <taxonomy> <category xml:id="acprose"> <catDesc>Academic prose</catDesc> </category> <!-- other categories here --> </taxonomy> <!-- ... --> <textClass> <catRef target="#acprose"/> <classCode scheme="http://www.udcc.org">001.9</classCode> <keywords scheme="http://authorities.loc.gov"> <list> <item>End of the world</item> <item>History - philosophy</item> </list> </keywords> </textClass> </pre>
Content model	<pre> <content> <alternate minOccurs="0" maxOccurs="unbounded"> </pre>

	<pre> <elementRef key="classCode" /> <elementRef key="catRef" /> <elementRef key="keywords" /> </alternate> </content> </pre>
Schema Declaration	<pre> element textClass { att.global.attributes, att.declarable.attributes, (classCode catRef keywords) * } </pre>

11.1.122. <textDesc>

<textDesc> (text description) provides a description of a text in terms of its situational parameters. [15.2.1. The Text Description]	
Module	corpus
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.declarable</u> (@default)
Member of	<u>model.profileDescPart</u>
Contained by	header: <u>profileDesc</u>
May contain	corpus: <u>channel</u> <u>constitution</u> <u>derivation</u> <u>domain</u> <u>factuality</u> <u>interaction</u> <u>preparedness</u> <u>purpose</u>
Example	<pre> <textDesc n="Informal domestic conversation"> <channel mode="s"/> <constitution type="single"/> <derivation type="original"/> <domain type="domestic"/> <factuality type="mixed"/> <interaction type="complete" active="plural" passive="many"/> <preparedness type="spontaneous"/> <purpose type="entertain" degree="high"/> <purpose type="inform" degree="medium"/> </textDesc> </pre>
Content model	<pre> <content> <sequence> <classRef key="model.textDescPart" expand="sequence"/> <elementRef key="purpose" minOccurs="1" maxOccurs="unbounded"/> </sequence> </content> </pre>
Schema Declaration	<pre> element textDesc { att.global.attributes, att.declarable.attributes, (channel, constitution, derivation, domain, factuality, interaction, preparedness, purpose+) } </pre>

11.1.123. <title>

<title> (title) contains a title for any kind of work. [3.12.2.2. Titles, Authors, and Editors 2.2.1. The Title Statement 2.2.5. The Series Statement]	
Module	core
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.linking</u> (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (<u>att.global.analytic</u> (@ana)) (<u>att.global.facs</u>

(@facs)) ([att.global.change](#) (@change)) ([att.global.responsibility](#) (@cert, @resp)) ([att.global.source](#) (@source)) [att.canonical](#) (@key, @ref) [att.dataable](#) (@calendar, @period) ([att.dataable.w3c](#) (@when, @notBefore, @notAfter, @from, @to)) ([att.dataable.iso](#) (@when-iso, @notBefore-iso, @notAfter-iso, @from-iso, @to-iso)) ([att.dataable.custom](#) (@when-custom, @notBefore-custom, @notAfter-custom, @from-custom, @to-custom, @datingPoint, @datingMethod)) [att.typed](#) (type, @subtype)

type classifies the title according to some convenient typology.

Derived from [att.typed](#)

Status Optional

Datatype [teidata.enumerated](#)

Sample values include: **main**
main title

sub
(subordinate) subtitle, title of part

alt
(alternate) alternate title, often in another language, by which the work is also known

short
abbreviated form of title

desc
(descriptive) descriptive paraphrase of the work functioning as a title

Note This attribute is provided for convenience in analysing titles and processing them according to their type; where such specialized processing is not necessary, there is no need for such analysis, and the entire title, including subtitles and any parallel titles, may be enclosed within a single [<title>](#) element.

level indicates the bibliographic level for a title, that is, whether it identifies an article, book, journal, series, or unpublished material.

Status Optional

Datatype [teidata.enumerated](#)

Legal values are: **a**
(analytic) the title applies to an analytic item, such as an article, poem, or other work published as part of a larger item.

m
(monographic) the title applies to a monograph such as a book or other item considered to be a distinct publication, including single volumes of multi-volume works

j
(journal) the title applies to any serial or periodical publication such as a journal, magazine, or newspaper

s
(series) the title applies to a series of otherwise distinct publications such as a collection

u
(unpublished) the title applies to any unpublished material (including theses and dissertations unless published by a commercial press)

	<p>Note</p> <p>The level of a title is sometimes implied by its context: for example, a title appearing directly within an <analytic> element is <i>ipso facto</i> of level 'a', and one appearing within a <series> element of level 's'. For this reason, the <i>level</i> attribute is not required in contexts where its value can be unambiguously inferred. Where it is supplied in such contexts, its value should not contradict the value implied by its parent element.</p>
Member of	model.emphLike

May contain	<p>analysis: <u>c</u> <u>cl</u> <u>interp</u> <u>interpGrp</u> <u>m</u> <u>pc</u> <u>phr</u> <u>s</u> <u>span</u> <u>spanGrp</u> <u>w</u></p> <p>core: <u>add</u> <u>address</u> <u>bibl</u> <u>date</u> <u>del</u> <u>desc</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>label</u> <u>lb</u> <u>listBibl</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>pb</u> <u>ptr</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>term</u> <u>title</u></p> <p>header: <u>idno</u></p> <p>linking: <u>link</u> <u>linkGrp</u> <u>seg</u></p> <p>msdescription: <u>msDesc</u> <u>objectType</u> <u>stamp</u></p> <p>namesdates: <u>affiliation</u> <u>country</u> <u>forename</u> <u>geo</u> <u>listEvent</u> <u>listOrg</u> <u>listPerson</u> <u>listPlace</u> <u>location</u> <u>orgName</u> <u>persName</u> <u>placeName</u> <u>settlement</u> <u>surname</u></p> <p>textcrit: <u>app</u> <u>listWit</u></p> <p>transcr: <u>listTranspose</u> <u>metamark</u> <u>restore</u> <u>subst</u></p> <p>character data</p>
Note	The attributes <i>key</i> and <i>ref</i> , inherited from the class <i>att.canonical</i> may be used to indicate the canonical form for the title; the former, by supplying (for example) the identifier of a record in some external library system; the latter by pointing to an XML element somewhere containing the canonical form of the title.
Example	<pre><title>Information Technology and the Research Process: Proceedings of a conference held at Cranfield Institute of Technology, UK, 18-21 July 1989</title></pre>
Example	<pre><title>Hardy's Tess of the D'Urbervilles: a machine readable edition</title></pre>
Example	<pre><title type="full"> <title type="main">Synthèse</title> <title type="sub">an international journal for epistemology, methodology and history of science</title> </title></pre>
Content model	<pre><content> <macroRef key="macro.paraContent"/> </content></pre>
Schema Declaration	<pre>element title { att.global.attributes, att.typed.attribute.subtype, att.canonical.attributes, att.dataable.attributes, attribute type { text }?, attribute level { "a" "m" "j" "s" "u" }?, macro.paraContent }</pre>

11.1.124. <titleStmt>

<titleStmt> (title statement) groups information about the title of a work and those responsible for its content. [2.2.1. The Title Statement 2.2. The File Description]	
Module	header
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source))
Contained by	header: fileDesc
May contain	core: author editor title
Example	<pre><titleStmt> <title>Capgrave's Life of St. John Norbert: a machine-readable transcription</title> <respStmt> <resp>compiled by</resp> <name>P.J. Lucas</name> </respStmt> </titleStmt></pre>
Content model	<pre><content> <sequence> <elementRef key="title" minOccurs="1" maxOccurs="unbounded"/> <classRef key="model.respLike" minOccurs="0" maxOccurs="unbounded"/> </sequence> </content></pre>
Schema Declaration	<pre>element titleStmt { att.global.attributes, (title+, model.respLike*) }</pre>

11.1.125. <transpose>

<transpose> describes a single textual transposition as an ordered list of at least two pointers specifying the order in which the elements indicated should be re-combined. [11.3.4.5. Transpositions]	
Module	transcr
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source))
Contained by	transcr: listTranspose
May contain	core: ptr
Note	<p>Transposition is usually indicated in a document by a metamark such as a wavy line or numbering.</p> <p>The order in which <ptr> elements appear within a <transpose> element should correspond with the desired order, as indicated by the metamark.</p>
Example	<pre><transpose> <ptr target="#ib02"/> <ptr target="#ib01"/> </transpose></pre> <p>The transposition recorded here indicates that the content of the element with identifier ib02 should appear before the content of the element with identifier ib01.</p>
Content model	<pre><content> <elementRef key="ptr" minOccurs="2" maxOccurs="unbounded"/> </content></pre>
Schema Declaration	<pre>element transpose { att.global.attributes, (ptr, ptr, ptr*) }</pre>

11.1.126. <variantEncoding>

<variantEncoding> (variant encoding) declares the method used to encode text-critical variants. [12.1.1. The Apparatus Entry]	
Module	textcrit
Attributes	<p>Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source))</p> <p>method indicates which method is used to encode the apparatus of variants.</p> <p>Status Required</p> <p>Datatype teidata.enumerated</p> <p>Legal values are:</p> <ul style="list-style-type: none"> location-referenced apparatus uses line numbers or other canonical reference scheme referenced in a base text. double-endpoint indicates the precise locations of the beginning and ending of each lemma relative to a base text. parallel-segmentation alternate readings of a passage are given in parallel in the text; no notion of a base text is necessary. <p>Note The value 'parallel-segmentation' requires in-line encoding of the apparatus.</p> <p>location indicates whether the apparatus appears within the running text or external to it.</p> <p>Status Required</p> <p>Datatype teidata.enumerated</p> <p>Schematron <sch:rule context="tei:variantEncoding"> <sch:assert test="(@location != 'external') or (@method != 'parallel-segmentation')"> The @location value "external" is inconsistent with the parallel-segmentation method of apparatus markup.</sch:assert> </sch:rule></p> <p>Legal values are:</p> <ul style="list-style-type: none"> internal apparatus appears within the running text. external apparatus appears outside the base text. <p>Note The value 'external' is inconsistent with the parallel-segmentation method of apparatus markup.</p>
Member of	model.encodingDescPart
Contained by	header: encodingDesc
May contain	Empty element
Example	<pre><variantEncoding method="location-referenced" location="external"/></pre>
Content model	

	<pre><content> <empty/> </content></pre>
Schema Declaration	<pre>element variantEncoding { att.global.attributes, attribute method { "location-referenced" "double-end-point" "parallel-segmentation" }, attribute location { "internal" "external" }, empty }</pre>

11.1.127. <w>

<w> (word) represents a grammatical (not necessarily orthographic) word. [17.1. Linguistic Segment Categories 17.4.2. Lightweight Linguistic Annotation]	
Module	analysis
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.segLike (@function) (att.datcat (@datcat, @valueDatcat)) (att.fragmentable (@part)) att.typed (@type, @subtype) att.linguistic (@lemma, @lemmaRef, @pos, @msd, @join) (att.lexicographic.normalized (@norm, @orig)) att.notated (@notation)

11.2. Model classes

11.2.1. *model.addrPart*

model.addrPart groups elements such as names or postal codes which may appear as part of a postal address. [3.6.2. Addresses]	
Module	tei
Used by	address
Members	model.nameLike [model.nameLike.agent [name orgName persName] model.offsetLike model.persNamePart [forename surname] model.placeStateLike [model.placeNamePart [country placeName settlement] location] idno rs] postCode street

11.2.2. *model.addressLike*

model.addressLike groups elements used to represent a postal or email address. [1. The TEI Infrastructure]	
Module	tei
Used by	location model.correspActionPart model.pPart.data
Members	address affiliation

11.2.3. *model.attributable*

model.attributable groups elements that contain a word or phrase that can be attributed to a source. [3.3.3. Quotation 4.3.2. Floating Texts]	
Module	tei
Used by	macro.phraseSeq model.inter
Members	model.quoteLike [quote]

11.2.4. *model.availabilityPart*

model.availabilityPart groups elements such as licences and paragraphs of text which may appear as part of an availability statement [2.2.4. Publication, Distribution, Licensing, etc.]	
Module	tei
Used by	availability
Members	licence

11.2.5. *model.biblLike*

model.biblLike groups elements containing a bibliographic description. [3.12. Bibliographic Citations and References]	
Module	tei
Used by	event listBibl location model.inter model.personPart org place sourceDesc
Members	bibl listBibl msDesc

11.2.6. *model.biblPart*

model.biblPart groups elements which represent components of a bibliographic description. [3.12. Bibliographic Citations and References]	
Module	tei
Used by	bibl
Members	model.imprintPart [pubPlace publisher] model.respLike [author editor] availability bibl

11.2.7. *model.common*

model.common groups common chunk- and inter-level elements. [1.3. The TEI Class System]	
Module	tei
Used by	body div
Members	model.divPart [model.lLike model.pLike [ab p]] model.inter [model.attributable [model.quoteLike [quote]] model.biblLike [bibl listBibl msDesc] model.egLike model.labelLike [desc label] model.listLike [listEvent listOrg listPerson listPlace listWit] model.oddDecl model.stageLike] q
Note	This class defines the set of chunk- and inter-level elements; it is used in many content models, including those for textual divisions.

11.2.8. *model.correspActionPart*

model.correspActionPart groups elements which define the parts (usually names, dates and places) of one action related to the correspondence.	
Module	tei
Used by	correspAction
Members	model.addressLike [address affiliation] model.dateLike [date] model.nameLike [model.nameLike.agent [name orgName persName] model.offsetLike model.persNamePart [forename surname] model.placeStateLike [model.placeNamePart [country placeName settlement] location] idno rs] note noteGrp

11.2.9. *model.correspDescPart*

model.correspDescPart groups together metadata elements for describing correspondence	
--	--

Module	tei
Used by	correspDesc
Members	correspAction note noteGrp

11.2.10. *model.dateLike*

model.dateLike groups elements containing temporal expressions. [3.6.4. Dates and Times 13.4. Dates]	
Module	tei
Used by	model.correspActionPart model.pPart.data setting
Members	date

11.2.11. *model.descLike*

model.descLike groups elements which contain a description of their function.	
Module	tei
Used by	gap graphic interp interpGrp linkGrp spanGrp
Members	desc

11.2.12. *model.divBottom*

model.divBottom groups elements appearing at the end of a text division. [4.2. Elements Common to All Divisions]	
Module	tei
Used by	body div
Members	model.divBottomPart model.divWrapper

11.2.13. *model.divLike*

model.divLike groups elements used to represent un-numbered generic structural divisions.	
Module	tei
Used by	back body div lem rdg
Members	div

11.2.14. *model.divPart*

model.divPart groups paragraph-level elements appearing directly within divisions. [1.3. The TEI Class System]	
Module	tei
Used by	lem macro.specialPara model.common rdg
Members	model.lLike model.pLike [ab p]
Note	Note that this element class does not include members of the model.inter class, which can appear either within or between paragraph-level items.

11.2.15. *model.divTop*

model.divTop groups elements appearing at the beginning of a text division. [4.2. Elements Common to All Divisions]	
Module	tei
Used by	body div
Members	model.divTopPart [model.headLike] model.divWrapper

11.2.16. *model.divTopPart*

model.divTopPart groups elements which can occur only at the beginning of a text division. [4.6. Title Pages]	
Module	tei
Used by	model.divTop
Members	model.headLike

11.2.17. *model.emphLike*

model.emphLike groups phrase-level elements which are typographically distinct and to which a specific function can be attributed. [3.3. Highlighting and Quotation]	
Module	tei
Used by	model.highlighted model.limitedPhrase
Members	term title

11.2.18. *model.encodingDescPart*

model.encodingDescPart groups elements which may be used inside <encodingDesc> and appear multiple times.	
Module	tei
Used by	encodingDesc
Members	variantEncoding

11.2.19. *model.eventLike*

model.eventLike groups elements which describe events.	
Module	tei
Used by	listEvent model.orgPart model.personPart place
Members	event listEvent

11.2.20. *model.frontPart*

model.frontPart groups elements which appear at the level of divisions within front or back matter. [7.1. Front and Back Matter]	
Module	tei
Used by	back
Members	model.frontPart.drama listBibl

11.2.21. *model.global*

model.global groups elements which may appear at any point within a TEI text. [1.3. The TEI Class System]	
Module	tei
Used by	address back bibl body date div lem m macro.paraContent macro.phraseSeq macro.phraseSeq.limited macro.specialPara person rdg surface surfaceGrp text w
Members	model.global.edit[app gap] model.global.meta[interp interpGrp link linkGrp listTranspose span spanGrp] model.milestoneLike[lb pb] model.noteLike[note noteGrp] metamark

11.2.22. *model.global.edit*

model.global.edit groups globally available elements which perform a specifically editorial function. [1.3. The TEI Class System]	
Module	tei
Used by	model.global
Members	app gap

11.2.23. *model.global.meta*

model.global.meta groups globally available elements which describe the status of other elements. [1.3. The TEI Class System]	
Module	tei
Used by	model.global
Members	interp interpGrp link linkGrp listTranspose span spanGrp
Note	Elements in this class are typically used to hold groups of links or of abstract interpretations, or by provide indications of certainty etc. It may find be convenient to localize all metada-

	ta elements, for example to contain them within the same division as the elements that they relate to; or to locate them all to a division of their own. They may however appear at any point in a TEI text.
--	--

11.2.24. *model.graphicLike*

model.graphicLike groups elements containing images, formulae, and similar objects. [3.10. Graphics and Other Non-textual Components]	
Module	tei
Used by	facsimile model.phrase surface
Members	graphic

11.2.25. *model.hiLike*

model.hiLike groups phrase-level elements which are typographically distinct but to which no specific function can be attributed. [3.3. Highlighting and Quotation]	
Module	tei
Used by	m model.highlighted model.limitedPhrase w
Members	hi q

11.2.26. *model.highlighted*

model.highlighted groups phrase-level elements which are typographically distinct. [3.3. Highlighting and Quotation]	
Module	tei
Used by	bibl model.phrase
Members	model.emphLike[term title] model.hiLike[hi q]

11.2.27. *model.imprintPart*

model.imprintPart groups the bibliographic elements which occur inside imprints. [3.12. Bibliographic Citations and References]	
Module	tei
Used by	model.biblPart
Members	pubPlace publisher

11.2.28. *model.inter*

model.inter groups elements which can appear either within or between paragraph-like elements. [1.3. The TEI Class System]	
Module	tei
Used by	lem macro.limitedContent macro.paraContent macro.specialPara model.common rdg witness
Members	model.attributable[model.quoteLike[quote]] model.biblLike[bibl listBibl msDesc] model.eg-Like model.labelLike[desc label] model.listLike[listEvent listOrg listPerson listPlace list-Wit] model.oddDecl model.stageLike

11.2.29. *model.labelLike*

model.labelLike groups elements used to gloss or explain other parts of a document.	
Module	tei
Used by	event location model.inter org place surface
Members	desc label

11.2.30. *model.limitedPhrase*

model.limitedPhrase groups phrase-level elements excluding those elements primarily intended for transcription of existing sources. [1.3. The TEI Class System]	
Module	tei
Used by	creation macro.limitedContent macro.phraseSeq.limited witness

Members	model.emphLike[term title] model.hiLike[hi q] model.pPart.data[model.addressLike[address affiliation] model.dateLike[date] model.measureLike[geo] model.nameLike[model.nameLike.agent[name orgName persName] model.offsetLike model.persNamePart[forename surname] model.placeStateLike[model.placeNamePart[country placeName settlement] location] idno rs]] model.pPart.editorial[subst] model.pPart.msdesc[objectType stamp] model.phrase.xml model.ptrLike[ptr ref]
----------------	---

11.2.31. *model.listLike*

model.listLike groups list-like elements. [3.8. Lists]	
Module	tei
Used by	back model.inter sourceDesc
Members	listEvent listOrg listPerson listPlace listWit

11.2.32. *model.measureLike*

model.measureLike groups elements which denote a number, a quantity, a measurement, or similar piece of text that conveys some numerical meaning. [3.6.3. Numbers and Measures]	
Module	tei
Used by	location model.pPart.data
Members	geo

11.2.33. *model.milestoneLike*

model.milestoneLike groups milestone-style elements used to represent reference systems. [1.3. The TEI Class System 3.11.3. Milestone Elements]	
Module	tei
Used by	listBibl model.global org subst
Members	lb pb

11.2.34. *model.nameLike*

model.nameLike groups elements which name or refer to a person, place, or organization.	
Module	tei
Used by	model.addrPart model.correspActionPart model.pPart.data org
Members	model.nameLike.agent[name orgName persName] model.offsetLike model.persNamePart[forename surname] model.placeStateLike[model.placeNamePart[country placeName settlement] location] idno rs
Note	A superset of the naming elements that may appear in datelines, addresses, statements of responsibility, etc.

11.2.35. *model.nameLike.agent*

model.nameLike.agent groups elements which contain names of individuals or corporate bodies. [3.6. Names, Numbers, Dates, Abbreviations, and Addresses]	
Module	tei
Used by	model.nameLike setting
Members	name orgName persName
Note	This class is used in the content model of elements which reference names of people or organizations.

11.2.36. *model.noteLike*

model.noteLike groups globally-available note-like elements. [3.9. Notes, Annotation, and Indexing]	
Module	tei
Used by	app event location model.global org place
Members	note noteGrp

11.2.37. *model.orgPart*

model.orgPart groups elements which form part of the description of an organization.	
Module	tei
Used by	<u>org</u>
Members	<u>model.eventLike</u> [<u>event</u> <u>listEvent</u>] <u>listOrg</u> <u>listPerson</u> <u>listPlace</u>

11.2.38. *model.pLike*

model.pLike groups paragraph-like elements.	
Module	tei
Used by	<u>availability</u> <u>back</u> <u>correspAction</u> <u>correspDesc</u> <u>encodingDesc</u> <u>event</u> <u>langUsage</u> <u>model.divPart</u> <u>msDesc</u> <u>org</u> <u>particDesc</u> <u>person</u> <u>physDesc</u> <u>place</u> <u>publicationStmt</u> <u>seriesStmt</u> <u>setting</u> <u>settingDesc</u> <u>sourceDesc</u>
Members	<u>ab</u> <u>p</u>

11.2.39. *model.pPart.data*

model.pPart.data groups phrase-level elements containing names, dates, numbers, measures, and similar data. [3.6. Names, Numbers, Dates, Abbreviations, and Addresses]	
Module	tei
Used by	<u>bibl</u> <u>model.limitedPhrase</u> <u>model.phrase</u>
Members	<u>model.addressLike</u> [<u>address</u> <u>affiliation</u>] <u>model.dateLike</u> [<u>date</u>] <u>model.measureLike</u> [<u>geo</u>] <u>model.nameLike</u> [<u>model.nameLike.agent</u> [<u>name</u> <u>orgName</u> <u>persName</u>] <u>model.offsetLike</u> <u>model.persNamePart</u> [<u>forename</u> <u>surname</u>] <u>model.placeStateLike</u> [<u>model.placeNamePart</u> [<u>country</u> <u>placeName</u> <u>settlement</u>] <u>location</u>] <u>idno</u> <u>rs</u>]

11.2.40. *model.pPart.edit*

model.pPart.edit groups phrase-level elements for simple editorial correction and transcription. [3.5. Simple Editorial Changes]	
Module	tei
Used by	<u>bibl</u> <u>model.phrase</u> <u>pc</u> <u>w</u>
Members	<u>model.pPart.editorial</u> [<u>subst</u>] <u>model.pPart.transcriptional</u> [<u>add</u> <u>del</u> <u>restore</u>]

11.2.41. *model.pPart.editorial*

model.pPart.editorial groups phrase-level elements for simple editorial interventions that may be useful both in transcribing and in authoring. [3.5. Simple Editorial Changes]	
Module	tei
Used by	<u>model.limitedPhrase</u> <u>model.pPart.edit</u>
Members	<u>subst</u>

11.2.42. *model.pPart.msdesc*

model.pPart.msdesc groups phrase-level elements used in manuscript description. [10. Manuscript Description]	
Module	tei
Used by	<u>model.limitedPhrase</u> <u>model.phrase</u>
Members	<u>objectType</u> <u>stamp</u>

11.2.43. *model.pPart.transcriptional*

model.pPart.transcriptional groups phrase-level elements used for editorial transcription of pre-existing source materials. [3.5. Simple Editorial Changes]	
Module	tei
Used by	<u>model.pPart.edit</u>

Members	add del restore
---------	---

11.2.44. *model.persNamePart*

model.persNamePart groups elements which form part of a personal name. [13.2.1. Personal Names]	
Module	namesdates
Used by	model.nameLike
Members	forename surname

11.2.45. *model.persStateLike*

model.persStateLike groups elements describing changeable characteristics of a person which have a definite duration, for example occupation, residence, or name.	
Module	tei
Used by	model.personPart
Members	affiliation occupation persName sex
Note	These characteristics of an individual are typically a consequence of their own action or that of others.

11.2.46. *model.personLike*

model.personLike groups elements which provide information about people and their relationships.	
Module	tei
Used by	listPerson org particDesc
Members	org person

11.2.47. *model.personPart*

model.personPart groups elements which form part of the description of a person. [15.2.2. The Participant Description]	
Module	tei
Used by	person
Members	model.biblLike[bibl listBibl msDesc] model.eventLike[event listEvent] model.persStateLike[affiliation occupation persName sex] birth death idno name

11.2.48. *model.phrase*

model.phrase groups elements which can occur at the level of individual words or phrases. [1.3. The TEI Class System]	
Module	tei
Used by	date lem macro.paraContent macro.phraseSeq macro.specialPara rdg
Members	model.graphicLike[graphic] model.highlighted[model.emphLike[term title] model.hiLike[hi q]] model.lPart model.pPart.data[model.addressLike[address affiliation] model.dateLike[date] model.measureLike[geo] model.nameLike[model.nameLike.agent[name orgName persName] model.offsetLike model.persNamePart[forename surname] model.placeStateLike[model.placeNamePart[country placeName settlement] location] idno rs]] model.pPart.edit[model.pPart.editorial[subst] model.pPart.transcriptional[add del restore]] model.pPart.msdesc[objectType stamp] model.phrase.xml model.ptrLike[ptr ref] model.segLike[c cl m pc phr s seg w] model.specDescLike
Note	This class of elements can occur within paragraphs, list items, lines of verse, etc.

11.2.49. *model.physDescPart*

model.physDescPart groups specialized elements forming part of the physical description of a manuscript or similar written source.	
Module	msdescription
Used by	physDesc
Members	accMat

11.2.50. model.placeLike

model.placeLike groups elements used to provide information about places and their relationships.	
Module	tei
Used by	listPlace org place settingDesc
Members	place

11.2.51. model.placeNamePart

model.placeNamePart groups elements which form part of a place name. [13.2.3. Place Names]	
Module	tei
Used by	location model.placeStateLike
Members	country placeName settlement

11.2.52. model.placeStateLike

model.placeStateLike groups elements which describe changing states of a place.	
Module	tei
Used by	model.nameLike place
Members	model.placeNamePart[country placeName settlement] location

11.2.53. model.profileDescPart

model.profileDescPart groups elements which may be used inside <profileDesc> and appear multiple times.	
Module	tei
Used by	profileDesc
Members	correspDesc creation handNotes langUsage listTranspose particDesc settingDesc textClass textDesc

11.2.54. model.ptrLike

model.ptrLike groups elements used for purposes of location and reference. [3.7. Simple Links and Cross-References]	
Module	tei
Used by	bibl model.limitedPhrase model.phrase model.publicationStmtPart.detail
Members	ptr ref

11.2.55. model.publicationStmtPart.agency

model.publicationStmtPart.agency groups the child elements of a <publicationStmt> element of the TEI header that indicate an authorising agent. [2.2.4. Publication, Distribution, Licensing, etc.]	
Module	tei
Used by	publicationStmt
Members	publisher
Note	The ‘agency’ child elements, while not required, are required if one of the ‘detail’ child elements is to be used. It is not valid to have a ‘detail’ child element without a preceding ‘agency’ child element. See also model.publicationStmtPart.detail .

11.2.56. model.publicationStmtPart.detail

model.publicationStmtPart.detail groups the agency-specific child elements of the <publicationStmt> element of the TEI header. [2.2.4. Publication, Distribution, Licensing, etc.]	
Module	tei
Used by	publicationStmt
Members	model.ptrLike[ptr ref] address availability date idno pubPlace
Note	A ‘detail’ child element may not occur unless an ‘agency’ child element precedes it.

See also `model.publicationStmtPart.agency`.

11.2.57. *model.quoteLike*

model.quoteLike groups elements used to directly contain quotations.	
Module	tei
Used by	<code>model.attributable</code>
Members	<code>quote</code>

11.2.58. *model.rdgLike*

model.rdgLike groups elements which contain a single reading, other than the lemma, within a textual variation. [12.1. The Apparatus Entry, Readings, and Witnesses]	
Module	textcrit
Used by	<code>app</code>
Members	<code>rdg</code>
Note	This class allows for variants of the <code><rdg></code> element to be easily created via TEI customizations.

11.2.59. *model.resource*

model.resource groups separate elements which constitute the content of a digital resource, as opposed to its metadata. [1.3. The TEI Class System]	
Module	tei
Used by	TEI
Members	<code>facsimile</code> <code>text</code>

11.2.60. *model.respLike*

model.respLike groups elements which are used to indicate intellectual or other significant responsibility, for example within a bibliographic element.	
Module	tei
Used by	<code>model.biblPart</code> <code>titleStmt</code>
Members	<code>author</code> <code>editor</code>

11.2.61. *model.segLike*

model.segLike groups elements used for arbitrary segmentation. [16.3. Blocks, Segments, and Anchors 17.1. Linguistic Segment Categories]	
Module	tei
Used by	<code>bibl</code> <code>model.phrase</code>
Members	<code>c</code> <code>cl</code> <code>m</code> <code>pc</code> <code>phr</code> <code>s</code> <code>seg</code> <code>w</code>
Note	The principles on which segmentation is carried out, and any special codes or attribute values used, should be defined explicitly in the <code><segmentation></code> element of the <code><encodingDesc></code> within the associated TEI header.

11.2.62. *model.settingPart*

model.settingPart groups elements used to describe the setting of a linguistic interaction.	
Module	tei
Used by	<code>setting</code>
Members	<code>activity</code> <code>locale</code> <code>placeName</code>

11.2.63. *model.teiHeaderPart*

model.teiHeaderPart groups high level elements which may appear more than once in a TEI header.	
Module	tei

Used by	teiHeader
Members	encodingDesc profileDesc

11.2.64. *model.textDescPart*

model.textDescPart groups elements used to categorize a text for example in terms of its situational parameters.	
Module	tei
Used by	textDesc
Members	channel constitution derivation domain factuality interaction preparedness

11.3. Attribute classes

11.3.1. *att.anchoring*

att.anchoring (anchoring) provides attributes for use on annotations, e.g. notes and groups of notes describing the existence and position of an anchor for annotations.	
Module	tei
Members	note noteGrp
Attributes	<p>Attributes</p> <p>anchored (anchored) indicates whether the copy text shows the exact place of reference for the note.</p> <p>Status Optional</p> <p>Datatype teidata.truthValue</p> <p>Default true</p> <p>Note In modern texts, notes are usually anchored by means of explicit footnote or endnote symbols. An explicit indication of the phrase or line annotated may however be used instead (e.g. ‘page 218, lines 3–4’). The <i>anchored</i> attribute indicates whether any explicit location is given, whether by symbol or by prose cross-reference. The value true indicates that such an explicit location is indicated in the copy text; the value false indicates that the copy text does not indicate a specific place of attachment for the note. If the specific symbols used in the copy text at the location the note is anchored are to be recorded, use the <i>n</i> attribute.</p> <p>targetEnd (target end) points to the end of the span to which the note is attached, if the note is not embedded in the text at that point.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of teidata.pointer separated by white-space</p> <p>Note This attribute is retained for backwards compatibility; it may be removed at a subsequent release of the Guidelines. The recommended way of pointing to a span of elements is by means of the range function of XPointer, as further described in 16.2.4.6. range().</p>
Example	<pre><p>(…) tamen reuerendos dominos archiepiscopum et canonicos Leopolienses necnon episcopum in duplicibus Quatuortemporibus<anchor xml:id="A55234"/> totaliter expeditui...</p> <!-- elsewhere in the document --> <noteGrp targetEnd="#A55234"> <note xml:lang="en"> Quatuor Tempora, so called dry fast days. </note> <note xml:lang="pl"> Quatuor Tempora, tzw. Suche dni postne. </note> </noteGrp></pre>

11.3.2. *att.ascribed*

att.ascribed provides attributes for elements representing speech or action that can be ascribed to a specific individual. [3.3.3. Quotation 8.3. Elements Unique to Spoken Texts]	
Module	tei

Members	att.ascribed.directed[q] change setting
Attributes	<p>Attributes</p> <p>who indicates the person, or group of people, to whom the element content is ascribed.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of teidata.pointer separated by white-space</p> <p>In the following example from Hamlet, speeches (<sp>) in the body of the play are linked to <castItem> elements in the <castList> using the <i>who</i> attribute.</p> <pre><castItem type="role"> <role xml:id="Barnardo">Barnardo</role> </castItem> <castItem type="role"> <role xml:id="Francisco">Francisco</role> <roleDesc>a soldier</roleDesc> </castItem> <!-- ... --> <sp who="#Barnardo"> <speaker>Barnardo</speaker> <l n="1">Who's there?</l> </sp> <sp who="#Francisco"> <speaker>Francisco</speaker> <l n="2">Nay, answer me: stand, and unfold yourself.</l> </sp></pre> <p>Note For transcribed speech, this will typically identify a participant or participant group; in other contexts, it will point to any identified person element.</p>

11.3.3. *att.ascribed.directed*

att.ascribed.directed provides attributes for elements representing speech or action that can be directed at a group or individual. [3.3.3. Quotation 8.3. Elements Unique to Spoken Texts]

Module	tei
Members	q
Attributes	<p>Attributes att.ascribed (@who)</p> <p>toWhom indicates the person, or group of people, to whom a speech act or action is directed.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of teidata.pointer separated by white-space</p> <p>In the following example from Mary Pix's The False Friend, speeches (<sp>) in the body of the play are linked to <castItem> elements in the <castList> using the <i>toWhom</i> attribute, which is used to specify who the speech is directed to. Additionally, the <stage> includes <i>toWhom</i> to indicate the directionality of the action.</p> <pre><castItem type="role"> <role xml:id="emil">Emilius.</role> </castItem> <castItem type="role"> <role xml:id="lov">Lovisa</role> </castItem> <castItem type="role"> <role xml:id="serv">A servant</role> </castItem> <!-- ... --> <sp who="#emil" toWhom="#lov"> <speaker>Emil.</speaker> <l n="1">My love!</l> </sp> <sp who="#lov" toWhom="#emil"> <speaker>Lov.</speaker> <l n="2">I have no Witness of my Noble Birth</l> <stage who="emil" toWhom="#serv">Pointing to her Woman.</stage></pre>

	<pre><l>But that poor helpless wretch—</l> </sp></pre>
Note	To indicate the recipient of written correspondence, use the elements used in section 2.4.6. Correspondence Description, rather than a <i>toWhom</i> attribute.

11.3.4. att.breaking

att.breaking provides attributes to indicate whether or not the element concerned is considered to mark the end of an orthographic token in the same way as whitespace. [3.11.3. Milestone Elements]	
Module	tei
Members	<u>lb</u> <u>pb</u>
Attributes	<p>Attributes</p> <p>break indicates whether or not the element bearing this attribute should be considered to mark the end of an orthographic token in the same way as whitespace.</p> <p>Status Recommended</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Sample values include</p> <p>yes the element bearing this attribute is considered to mark the end of any adjacent orthographic token irrespective of the presence of any adjacent whitespace</p> <p>no the element bearing this attribute is considered not to mark the end of any adjacent orthographic token irrespective of the presence of any adjacent whitespace</p> <p>maybe the encoding does not take any position on this issue.</p> <p>In the following lines from the ‘Dream of the Rood’, linebreaks occur in the middle of the words <i>l#ðost</i> and <i>reord-berendum</i>.</p> <pre><ab> ...e#esa tome iu ic#as #e#orden #ita heardo#t . leodum la<lb break="no"/> ðost ærpan ichim lifes #e# rihtne #erymde reord be<lb break="no"/> rendum h#æt me þa#e#eorðode #uldres ealdor ofer... </ab></pre>

11.3.5. att.cReferencing

att.cReferencing provides attributes that may be used to supply a <i>canonical reference</i> as a means of identifying the target of a pointer.	
Module	tei
Members	<u>ptr</u> <u>ref</u> <u>term</u>
Attributes	<p>Attributes</p> <p>cRef (canonical reference) specifies the destination of the pointer by supplying a canonical reference expressed using the scheme defined in a <code><refsDecl></code> element in the TEI header</p> <p>Status Optional</p> <p>Datatype <u>teidata.text</u></p> <p>Note The value of <i>cRef</i> should be constructed so that when the algorithm for the resolution of canonical references (described in section 16.2.5. Canonical References) is applied to it the result is a valid URI reference to the intended target.</p> <p>The <code><refsDecl></code> to use may be indicated with the <i>decls</i> attribute.</p>

Currently these Guidelines only provide for a single canonical reference to be encoded on any given `<ptr>` element.

11.3.6. *att.canonical*

att.canonical provides attributes that can be used to associate a representation such as a name or title with canonical information about the object being named or referenced. [13.1.1. Linking Names and Their Referents]

Module	tei
Members	att.naming [att.personal [forename name orgName persName placeName surname] affiliation author birth country death editor event occupation pubPlace rs settlement] correspDesc date objectType publisher term title
Attributes	<p>Attributes</p> <p>key provides an externally-defined means of identifying the entity (or entities) being named, using a coded value of some kind.</p> <p>Status Optional</p> <p>Datatype teidata.text</p> <pre><author> <name key="name 427308" type="organisation">[New Zealand Parliament, Legislative Council]</name> </author> <author> <name key="Hugo, Victor (1802-1885)" ref="http://www.idref.fr/026927608">Victor Hugo</name> </author></pre> <p>Note The value may be a unique identifier from a database, or any other externally-defined string identifying the referent.</p> <p>No particular syntax is proposed for the values of the <i>key</i> attribute, since its form will depend entirely on practice within a given project. For the same reason, this attribute is not recommended in data interchange, since there is no way of ensuring that the values used by one project are distinct from those used by another. In such a situation, a preferable approach for magic tokens which follows standard practice on the Web is to use a <i>ref</i> attribute whose value is a tag URI as defined in RFC 4151.</p> <p>ref (reference) provides an explicit means of locating a full definition or identity for the entity being named by means of one or more URIs.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of teidata.pointer separated by whitespace</p> <pre><name ref="http://viaf.org/viaf/109557338" type="person">Seamus Heaney</name></pre> <p>Note The value must point directly to one or more XML elements or other resources by means of one or more URIs, separated by whitespace. If more than one is supplied the implication is that the name identifies several distinct entities.</p>

11.3.7. *att.coordinated*

att.coordinated provides attributes that can be used to position their parent element within a two dimensional coordinate system.

Module	transcr
Members	surface
Attributes	<p>Attributes</p> <p>start indicates the element within a transcription of the text containing at least the start of the writing represented by this zone or surface.</p> <p>Status Optional</p>

		Datatype <u>teidata.pointer</u> gives the x coordinate value for the upper left corner of a rectangular space. Status Optional Datatype <u>teidata.numeric</u>
	ulx	
		Datatype <u>teidata.numeric</u> gives the y coordinate value for the upper left corner of a rectangular space. Status Optional Datatype <u>teidata.numeric</u>
	uly	
		Datatype <u>teidata.numeric</u> gives the x coordinate value for the lower right corner of a rectangular space. Status Optional Datatype <u>teidata.numeric</u>
	lrx	
		Datatype <u>teidata.numeric</u> gives the y coordinate value for the lower right corner of a rectangular space. Status Optional Datatype <u>teidata.numeric</u>
	lry	
		Datatype <u>teidata.numeric</u> identifies a two dimensional area by means of a series of pairs of numbers, each of which gives the x,y coordinates of a point on a line enclosing the area. Status Optional Datatype 3-# occurrences of <u>teidata.point</u> separated by whitespace
	points	

11.3.8. att.dateable

att.dateable provides attributes for normalization of elements that contain dates, times, or dateable events. [3.6.4. Dates and Times 13.4. Dates]	
Module	tei
Members	affiliation author birth change country creation date death editor event idno licence location name occupation orgName persName placeName settlement sex stamp title
Attributes	<p>Attributes <u>att.dateable.w3c</u> (@when, @notBefore, @notAfter, @from, @to) <u>att.dateable.iso</u> (@when-iso, @notBefore-iso, @notAfter-iso, @from-iso, @to-iso) <u>att.dateable.custom</u> (@when-custom, @notBefore-custom, @notAfter-custom, @from-custom, @to-custom, @datingPoint, @datingMethod)</p> <p>calendar indicates one or more systems or calendars to which the date represented by the content of this element belongs. Status Optional Datatype 1-# occurrences of <u>teidata.pointer</u> separated by white-space Schematron <sch:rule context="tei:*[@calendar]"> <sch:assert test="string-length(.) gt 0"> @calendar indicates one or more systems or calendars to which the date represented by the content of this element belongs, but this <sch:name/> element has no textual content.</sch:assert> </sch:rule></p> <div> He was born on <date calendar="#gregorian">Feb. 22, 1732</date> (<date when="1732-02-22">Feb. 11, 1731/32, O.S.</date>). </div> <div> He was born on <date calendar="#gregorian #julian" when="1732-02-22">Feb. 22, 1732 (Feb. 11, 1731/32, O.S.)</date>. </div> <p>Note Note that the <i>calendar</i> attribute (unlike <i>datingMethod</i> defined in <u>att.dateable.custom</u>) defines the calendar sys-</p>

	<p>tem of the date in the original material defined by the parent element, <i>not</i> the calendar to which the date is normalized.</p> <p>period supplies pointers to one or more definitions of named periods of time (typically <category>s or <calendar>s) within which the datable item is understood to have occurred.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by whitespace</p>
Note	<p>This ‘superclass’ provides attributes that can be used to provide normalized values of temporal information. By default, the attributes from the att.datable.w3c class are provided. If the module for names & dates is loaded, this class also provides attributes from the att.datable.iso and att.datable.custom classes. In general, the possible values of attributes restricted to the W3C datatypes form a subset of those values available via the ISO 8601 standard. However, the greater expressiveness of the ISO datatypes may not be needed, and there exists much greater software support for the W3C datatypes.</p>

11.3.9. att.datable.custom

att.datable.custom provides attributes for normalization of elements that contain datable events to a custom dating system (i.e. other than the Gregorian used by W3 and ISO). [13.4. Dates]	
Module	namesdates
Members	<u>att.datable</u> [<u>affiliation</u> <u>author</u> <u>birth</u> <u>change</u> <u>country</u> <u>creation</u> <u>date</u> <u>death</u> <u>editor</u> <u>event</u> <u>idno</u> <u>licence</u> <u>location</u> <u>name</u> <u>occupation</u> <u>orgName</u> <u>persName</u> <u>placeName</u> <u>settlement</u> <u>sex</u> <u>stamp</u> <u>title</u>]
Attributes	<p>Attributes</p> <p>when-custom supplies the value of a date or time in some custom standard form.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.word</u> separated by whitespace</p> <p>The following are examples of custom date or time formats that are <i>not</i> valid ISO or W3C format normalizations, normalized to a different dating system</p> <pre><p>Alhazen died in Cairo on the <date when="1040-03-06" when-custom="431-06-12"> 12th day of Jumada t-Tania, 430 AH </date>.</p> <p>The current world will end at the <date when="2012-12-21" when-custom="13.0.0.0">end of B'ak'tun 13</date>.</p> <p>The Battle of Meggidu (<date when-custom="Thutmose_III:23">23rd year of reign of Thutmose III</date>).</p> <p>Esidorus bixit in pace annos LXX plus minus sub <date when-custom="Ind:4-10-11">die XI mensis Octobris indictione IIII</date> </p></pre> <p>Not all custom date formulations will have Gregorian equivalents. The <i>when-custom</i> attribute and other custom dating are not constrained to a datatype by the TEI, but individual projects are recommended to regularize and document their dating formats.</p> <p>notBefore-custom specifies the earliest possible date for the event in some custom standard form.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.word</u> separated by whitespace</p> <p>notAfter-custom specifies the latest possible date for the event in some custom standard form.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.word</u> separated by whitespace</p> <p>from-custom indicates the starting point of the period in some custom standard form.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.word</u> separated by whitespace</p>

	<pre> <event xml:id="FIRE1" datingMethod="#julian" from-custom="1666-09-02" to-custom="1666-09-05"> <head>The Great Fire of London</head> <p>The Great Fire of London burned through a large part of the city of London.</p> </event> </pre> <p>to-custom indicates the ending point of the period in some custom standard form.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of teidata.word separated by whitespace</p> <p>datingPoint supplies a pointer to some location defining a named point in time with reference to which the datable item is understood to have occurred</p> <p>Status Optional</p> <p>Datatype teidata.pointer</p> <p>datingMethod supplies a pointer to a <code><calendar></code> element or other means of interpreting the values of the custom dating attributes.</p> <p>Status Optional</p> <p>Datatype teidata.pointer</p> <pre> Contayning the Originall, Antiquity, Increa#e, Moderne e#tate, and de#cription of that Citie, written in the yeare <date when-custom="1598" calendar="#julian" datingMethod="#julian">1598</date>. by Iohn Stow Citizen of London. </pre> <p>In this example, the <i>calendar</i> attribute points to a <code><calendar></code> element for the Julian calendar, specifying that the text content of the <code><date></code> element is a Julian date, and the <i>datingMethod</i> attribute also points to the Julian calendar to indicate that the content of the <i>when-custom</i> attribute value is Julian too.</p> <pre> <date when="1382-06-28" when-custom="6890-06-20" datingMethod="#creationOfWorld"> u### ##### ### <num>#</num> ##### <num>###</num> </date> </pre> <p>In this example, a date is given in a Mediaeval text measured "from the creation of the world", which is normalised (in <i>when</i>) to the Gregorian date, but is also normalized (in <i>when-custom</i>) to a machine-actionable, numeric version of the date from the Creation.</p> <p>Note Note that the <i>datingMethod</i> attribute (unlike <i>calendar</i> defined in att.datable) defines the calendar or dating system to which the date described by the parent element is normalized (i.e. in the <i>when-custom</i> or other <i>X-custom</i> attributes), <i>not</i> the calendar of the original date in the element.</p>
--	--

11.3.10. att.datable.iso

att.datable.iso provides attributes for normalization of elements that contain datable events using the ISO 8601 standard. [3.6.4. Dates and Times 13.4. Dates]	
Module	namesdates
Members	att.datable [affiliation author birth change country creation date death editor event idno licence location name occupation orgName persName placeName settlement sex stamp title]
Attributes	<p>Attributes</p> <p>when-iso supplies the value of a date or time in a standard form.</p> <p>Status Optional</p> <p>Datatype teidata.temporal.iso</p> <p>The following are examples of ISO date, time, and date & time formats that are <i>not</i> valid W3C format normalizations.</p> <pre> <date when-iso="1996-09-24T07:25+00">Sept. 24th, 1996 at 3:25 in the morning</date> <date when-iso="1996-09-24T03:25-04">Sept. 24th, 1996 at 3:25 in the morning</date> </pre>

	<pre> <time when-iso="1999-01-04T20:42-05">4 Jan 1999 at 8:42 pm</time> <time when-iso="1999-W01-1T20,70-05">4 Jan 1999 at 8:42 pm</time> <date when-iso="2006-05-18T10:03">a few minutes after ten in the morning on Thu 18 May</date> <time when-iso="03:00">3 A.M.</time> <time when-iso="14">around two</time> <time when-iso="15,5">half past three</time> </pre> <p>All of the examples of the <i>when</i> attribute in the <i>att.dataable.w3c</i> class are also valid with respect to this attribute.</p> <pre> He likes to be punctual. I said <q> <time when-iso="12">around noon</time> </q>, and he showed up at <time when-iso="12:00:00">12 O'clock</time> </pre> <p>The second occurrence of <code><time></code> could have been encoded with the <i>when</i> attribute, as 12:00:00 is a valid time with respect to the W3C <i>XML Schema Part 2: Datatypes Second Edition</i> specification. The first occurrence could not.</p> <p>notBefore-iso specifies the earliest possible date for the event in standard form, e.g. yyyy-mm-dd. Status Optional Datatype teidata.temporal.iso</p> <p>notAfter-iso specifies the latest possible date for the event in standard form, e.g. yyyy-mm-dd. Status Optional Datatype teidata.temporal.iso</p> <p>from-iso indicates the starting point of the period in standard form. Status Optional Datatype teidata.temporal.iso</p> <p>to-iso indicates the ending point of the period in standard form. Status Optional Datatype teidata.temporal.iso</p>
Note	<p>The value of these attributes should be a normalized representation of the date, time, or combined date & time intended, in any of the standard formats specified by ISO 8601, using the Gregorian calendar.</p> <p>If both <i>when-iso</i> and <i>dur-iso</i> are specified, the values should be interpreted as indicating a span of time by its starting time (or date) and duration. That is,</p> <pre> <date when-iso="2007-06-01" dur-iso="P8D"/> </pre> <p>indicates the same time period as</p> <pre> <date when-iso="2007-06-01/P8D"/> </pre> <p>In providing a 'regularized' form, no claim is made that the form in the source text is incorrect; the regularized form is simply that chosen as the main form for purposes of unifying variant forms under a single heading.</p>

11.3.11. att.dataable.w3c

att.dataable.w3c provides attributes for normalization of elements that contain datable events conforming to the W3C <i>XML Schema Part 2: Datatypes Second Edition</i> . [3.6.4. Dates and Times 13.4. Dates]	
Module	tei
Members	att.dataable [affiliation author birth change country creation date death editor event idno licence location name occupation orgName persName placeName settlement sex stamp title]
Attributes	<p>Attributes</p> <p>when supplies the value of the date or time in a standard form, e.g. yyyy-mm-dd. Status Optional Datatype teidata.temporal.w3c</p> <p>Examples of W3C date, time, and date & time formats.</p> <pre> <p> <date when="1945-10-24">24 Oct 45</date> </pre>

	<pre> <date when="1996-09-24T07:25:00Z">September 24th, 1996 at 3:25 in the morning</date> <time when="1999-01-04T20:42:00-05:00">Jan 4 1999 at 8 pm</time> <time when="14:12:38">fourteen twelve and 38 seconds</time> <date when="1962-10">October of 1962</date> <date when="--06-12">June 12th</date> <date when="---01">the first of the month</date> <date when="--08">August</date> <date when="2006">MMVI</date> <date when="0056">AD 56</date> <date when="-0056">56 BC</date> </p> This list begins in the year 1632, more precisely on Trinity Sunday, i.e. the Sunday after Pentecost, in that year the <date calendar="#julian" when="1632-06-06">27th of May (old style)</date>. <opener> <dateline> <placeName>Dorchester, Village,</placeName> <date when="1828-03-02">March 2d. 1828.</date> </dateline> <salute>To Mrs. Cornell,</salute> Sunday <time when="12:00:00">noon.</time> </opener> </pre>
notBefore	<p>specifies the earliest possible date for the event in standard form, e.g. yyyy-mm-dd.</p> <p>Status Optional</p> <p>Datatype teidata.temporal.w3c</p>
notAfter	<p>specifies the latest possible date for the event in standard form, e.g. yyyy-mm-dd.</p> <p>Status Optional</p> <p>Datatype teidata.temporal.w3c</p>
from	<p>indicates the starting point of the period in standard form, e.g. yyyy-mm-dd.</p> <p>Status Optional</p> <p>Datatype teidata.temporal.w3c</p>
to	<p>indicates the ending point of the period in standard form, e.g. yyyy-mm-dd.</p> <p>Status Optional</p> <p>Datatype teidata.temporal.w3c</p>
Schematron	<pre> <sch:rule context="tei:*[@when]"> <sch:report test="@notBefore @notAfter @from @to" role="nonfatal">The @when attribute cannot be used with any other att.dataable.w3c attrib- utes.</sch:report> </sch:rule> </pre>
Schematron	<pre> <sch:rule context="tei:*[@from]"> <sch:report test="@notBefore" role="nonfatal">The @from and @notBefore attributes cannot be used together.</sch:report> </sch:rule> </pre>
Schematron	<pre> <sch:rule context="tei:*[@to]"> <sch:report test="@notAfter" role="nonfatal">The @to and @notAfter attributes cannot be used together.</sch:report> </sch:rule> </pre>
Example	<pre> <date from="1863-05-28" to="1863-06-01">28 May through 1 June 1863</date> </pre>
Note	<p>The value of these attributes should be a normalized representation of the date, time, or combined date & time intended, in any of the standard formats specified by <i>XML Schema Part 2: Datatypes Second Edition</i>, using the Gregorian calendar.</p> <p>The most commonly-encountered format for the date portion of a temporal attribute is yyyy-mm-dd, but yyyy, --mm, ---dd, yyyy-mm, or --mm-dd may also be used. For the time part, the form hh:mm:ss is used.</p> <p>Note that this format does not currently permit use of the value 0000 to represent the year 1 BCE; instead the value -0001 should be used.</p>

11.3.12. att.datcat

att.datcat provides attributes that are used to align XML elements or attributes with the appropriate Data Categories (DCs) defined by the ISO 12620:2009 standard and stored in the Web repository called ISOCat at <http://www.isocat.org/>. [9.5.2. Lexical View 18.3. Other Atomic Feature Values]

Module	tei
Members	att.segLike [c cl m pc phr s seg w]
Attributes	<p>Attributes</p> <p>datcat contains a PID (persistent identifier) that aligns the given element with the appropriate Data Category (or categories) in ISOcat. Status Optional Datatype 1-# occurrences of teidata.pointer separated by white-space</p> <p>valueDatcat contains a PID (persistent identifier) that aligns the content of the given element or the value of the given attribute with the appropriate simple Data Category (or categories) in ISOcat. Status Optional Datatype 1-# occurrences of teidata.pointer separated by white-space</p>
Example	<p>In this example <i>dcr:datcat</i> relates the feature name to the data category "partOfSpeech" and <i>dcr:valueDatcat</i> the feature value to the data category "commonNoun". Both these data categories reside in the ISOcat DCR at www.isocat.org, which is the DCR used by ISO TC37 and hosted by its registration authority, the MPI for Psycholinguistics in Nijmegen.</p> <pre><fs xmlns:dcr="http://www.isocat.org/ns/dcr"> <f name="POS" dcr:datcat="http://www.isocat.org/datcat/DC-1345" fVal="#commonNoun" dcr:valueDatcat="http://www.isocat.org/datcat/DC-1256"/> </fs></pre>
Note	ISO 12620:2009 is a standard describing the data model and procedures for a Data Category Registry (DCR). Data categories are defined as elementary descriptors in a linguistic structure. In the DCR data model each data category gets assigned a unique Persistent Identifier (PID), i.e., an URI. Linguistic resources or preferably their schemas that make use of data categories from a DCR should refer to them using this PID. For XML-based resources, like TEI documents, ISO 12620:2009 normative Annex A gives a small Data Category Reference XML vocabulary (also available online at http://www.isocat.org/12620/), which provides two attributes, <i>dcr:datcat</i> and <i>dcr:valueDatcat</i> .

11.3.13. *att.declarable*

att.declarable provides attributes for those elements in the TEI header which may be independently selected by means of the special purpose <i>decls</i> attribute. [15.3. Associating Contextual Information with a Text]	
Module	tei
Members	availability bibl correspDesc langUsage listBibl listEvent listOrg listPerson listPlace particDesc seriesStmnt settingDesc sourceDesc textClass textDesc
Attributes	<p>Attributes</p> <p>default indicates whether or not this element is selected by default when its parent is selected. Status Optional Datatype teidata.truthValue Legal values true are: This element is selected if its parent is selected false This element can only be selected explicitly, unless it is the only one of its kind, in which case it is selected if its parent is selected.[Default]</p>
Note	The rules governing the association of declarable elements with individual parts of a TEI text are fully defined in chapter 15.3. Associating Contextual Information with a Text. Only one element of a particular type may have a <i>default</i> attribute with a value of true.

11.3.14. att.declaring

att.declaring provides attributes for elements which may be independently associated with a particular declarable element within the header, thus overriding the inherited default for that element. [15.3. Associating Contextual Information with a Text]	
Module	tei
Members	ab back body div facsimile geo graphic msDesc p ptr ref surface surfaceGrp term text
Attributes	<p>Attributes</p> <p>decls identifies one or more <i>declarable elements</i> within the header, which are understood to apply to the element bearing this attribute and its content.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of teidata.pointer separated by white-space</p>
Note	The rules governing the association of declarable elements with individual parts of a TEI text are fully defined in chapter 15.3. Associating Contextual Information with a Text.

11.3.15. att.dimensions

att.dimensions provides attributes for describing the size of physical objects.	
Module	tei
Members	add birth date death del gap restore subst
Attributes	<p>Attributes att.ranging (@atLeast, @atMost, @min, @max, @confidence)</p> <p>unit names the unit used for the measurement</p> <p>Status Optional</p> <p>Datatype teidata.enumerated</p> <p>Suggested values include:</p> <p>cm (centimetres)</p> <p>mm (millimetres)</p> <p>in (inches)</p> <p>line lines of text</p> <p>char (characters) characters of text</p> <p>quantity specifies the length in the units specified</p> <p>Status Optional</p> <p>Datatype teidata.numeric</p> <p>extent indicates the size of the object concerned using a project-specific vocabulary combining quantity and units in a single string of words.</p> <p>Status Optional</p> <p>Datatype teidata.text</p> <p><code><gap extent="5 words"/></code></p> <p><code><height extent="half the page"/></code></p> <p>precision characterizes the precision of the values specified by the other attributes.</p> <p>Status Optional</p> <p>Datatype teidata.certainty</p> <p>scope where the measurement summarizes more than one observation, specifies the applicability of this measurement.</p> <p>Status Optional</p>

	Datatype teidata.enumerated Sample values include: all measurement applies to all instances. most measurement applies to most of the instances inspected. range measurement applies to only the specified range of instances.
--	---

11.3.16. att.divLike

att.divLike provides attributes common to all elements which behave in the same way as divisions. [4. Default Text Structure]	
Module	tei
Members	div
Attributes	<p>Attributes att.fragmentable (@part)</p> <p>org (organization) specifies how the content of the division is organized. Status Optional Datatype teidata.enumerated Legal values are: com- no claim is made about the sequence in which the immediate contents of this division are to be processed, or their inter-relationships. ite the immediate contents of this element are regarded as forming a logical unit, to be processed in sequence.[Default] uni- the immediate contents of this element are regarded as forming a logical unit, to be processed in sequence.[Default]</p> <p>sample indicates whether this division is a sample of the original source and if so, from which part. Status Optional Datatype teidata.enumerated Legal values are: ini- division lacks material present at end in source. me- division lacks material at start and end. di- division lacks material at start and end. al division lacks material at start and end. fi- division lacks material at start. nal division lacks material at start. un- position of sampled material within original unknown. known position of sampled material within original unknown. com- division is not a sample.[Default] pleted division is not a sample.[Default]</p>

11.3.17. att.docStatus

att.docStatus provides attributes for use on metadata elements describing the status of a document.	
Module	tei
Members	bibl change msDesc revisionDesc
Attributes	Attributes

	<p>status describes the status of a document either currently or, when associated with a dated element, at the time indicated.</p> <p>Status Optional</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Sample values include: ap-proved can-di-date cleared dep-re-cat-ed draft [Default] em-bar-goed ex-pired frozen gal-ley pro-posed pub-lished rec-om-men-da-tion sub-mit-ted un-fin-ished with-drawn</p>
Example	<pre><revisionDesc status="published"> <change when="2010-10-21" status="published"/> <change when="2010-10-02" status="cleared"/> <change when="2010-08-02" status="embargoed"/> <change when="2010-05-01" status="frozen" who="#MSM"/> <change when="2010-03-01" status="draft" who="#LB"/> </revisionDesc></pre>

11.3.18. *att.editLike*

att.editLike provides attributes describing the nature of an encoded scholarly intervention or interpretation of any kind. [3.5. Simple Editorial Changes 10.3.1. Origination 13.3.2. The Person Element 11.3.1.1. Core Elements for Transcriptional Work]	
Module	tei
Members	att.transcriptional [add del restore subst] affiliation birth date death event gap location name occupation org orgName persName person place placeName sex
Attributes	<p>Attributes</p> <p>evidence indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of teidata.enumerated separated by whitespace</p> <p>Suggested values include: in- there is internal evidence to support the intervention. ex- there is external evidence to support the intervention. con- the intervention or interpretation has been made by the editor, cataloguer, or scholar on the basis of their expertise.</p> <p>instant indicates whether this is an instant revision or not.</p> <p>Status Optional</p> <p>Datatype teidata.xTruthValue</p> <p>Default false</p>
Note	<p>The members of this attribute class are typically used to represent any kind of editorial intervention in a text, for example a correction or interpretation, or to date or localize manuscripts etc.</p> <p>Each pointer on the <i>source</i> (if present) corresponding to a witness or witness group should reference a bibliographic citation such as a witness, msDesc, or bibl element, or another external bibliographic citation, documenting the source concerned.</p>

11.3.19. *att.edition*

att.edition provides attributes identifying the source edition from which some encoded feature derives.	
Module	tei
Members	lb pb
Attributes	<p>Attributes</p> <p>ed (edition) supplies a sigil or other arbitrary identifier for the source edition in which the associated feature (for example, a page, column, or line break) occurs at this point in the text.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of teidata.word separated by whitespace</p> <p>edRef (edition reference) provides a pointer to the source edition in which the associated feature (for example, a page, column, or line break) occurs at this point in the text.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of teidata.pointer separated by whitespace</p>

Example	<pre><l>Of Mans First Disobedience,<lb ed="1674"/> and<lb ed="1667"/> the Fruit</l> <l>Of that Forbidden Tree, whose<lb ed="1667 1674"/> mortal tast</l> <l>Brought Death into the World,<lb ed="1667"/> and all<lb ed="1674"/> our woe,</l></pre>
Example	<pre><listBibl> <bibl xml:id="stapledon1937"> <author>Olaf Stapledon</author>, <title>Starmaker</title>, <publisher>Methuen</publisher>, <date>1937</date> </bibl> <bibl xml:id="stapledon1968"> <author>Olaf Stapledon</author>, <title>Starmaker</title>, <publisher>Dover</publisher>, <date>1968</date> </bibl> </listBibl> <!-- ... --> <p>Looking into the future aeons from the supreme moment of the cosmos, I saw the populations still with all their strength maintaining the<pb n="411" edRef="#stapledon1968"/>essentials of their ancient culture, still living their personal lives in zest and endless novelty of action, ... I saw myself still preserving, though with increasing difficulty, my lucid con-<pb n="291" edRef="#stapledon1937"/>sciousness;</p></pre>

11.3.20. att.fragmentable

att.fragmentable provides attributes for representing fragmentation of a structural element, typically as a consequence of some overlapping hierarchy.

Module	tei
Members	att.divLike[div] att.segLike[c cl m pc phr s seg w] ab p
Attributes	<p>Attributes</p> <p>part specifies whether or not its parent element is fragmented in some way, typically by some other overlapping structure: for example a speech which is divided between two or more verse stanzas, a paragraph which is split across a page division, a verse line which is divided between two speakers.</p> <p>Status Optional</p> <p>Datatype teidata.enumerated</p> <p>Legal values Y are: (yes) the element is fragmented in some (unspecified) respect</p> <p>N (no) the element is not fragmented, or no claim is made as to its completeness[Default]</p> <p>I (initial) this is the initial part of a fragmented element</p> <p>M (medial) this is a medial part of a fragmented element</p> <p>F (final) this is the final part of a fragmented element</p> <p>Note The values I, M, or F should be used only where it is clear how the element may be reconstituted.</p>

11.3.21. att.global

att.global provides attributes common to all elements in the TEI encoding scheme. [1.3.1.1. Global Attributes]

Attributes	<p> Attributes att.global.rendition (@rend, @style, @rendition) att.global.link (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select) att.global.analytic (@ana) att.global.facs (@facs) att.global.change (@change) att.global.responsibility (@cert, @resp) att.global.source (@source) </p> <p> xml:id (identifier) provides a unique identifier for the element bearing the attribute. </p> <p> Status Optional </p> <p> Datatype ID </p> <p> Note The <i>xml:id</i> attribute may be used to specify a canonical reference for an element; see section 3.11. Reference Systems. </p> <p> n (number) gives a number (or other label) for an element, which is not necessarily unique within the document. </p> <p> Status Optional </p> <p> Datatype teidata.text </p> <p> Note The value of this attribute is always understood to be a single token, even if it contains space or other punctuation characters, and need not be composed of numbers only. It is typically used to specify the numbering of chapters, sections, list items, etc.; it may also be used in the specification of a standard reference system for the text. </p> <p> xml:lang (language) indicates the language of the element content using a 'tag' generated according to BCP 47. </p> <p> Status Optional </p> <p> Datatype teidata.language </p> <pre> <p> ... The consequences of this rapid depopulation were the loss of the last <foreign xml:lang="rap">ariki</foreign> or chief (Routledge 1920:205,210) and their connections to ancestral territorial organization.</p> </pre> <p> Note The <i>xml:lang</i> value will be inherited from the immediately enclosing element, or from its parent, and so on up the document hierarchy. It is generally good practice to specify <i>xml:lang</i> at the highest appropriate level, noticing that a different default may be needed for the <teiHeader> from that needed for the associated resource element or elements, and that a single TEI document may contain texts in many languages. </p> <p> Only attributes with free text values (rare in these guidelines) will be in the scope of <i>xml:lang</i>. </p> <p> The authoritative list of registered language subtags is maintained by IANA and is available at http://www.iana.org/assignments/language-subtag-registry. For a good general overview of the construction of language tags, see http://www.w3.org/International/articles/language-tags/, and for a practical step-by-step guide, see https://www.w3.org/International/questions/qa-choosing-language-tags.en.php. </p> <p> The value used must conform with BCP 47. If the value is a private use code (i.e., starts with x- or contains x-), a <language> element with a matching value for its <i>ident</i> attribute should be supplied in the TEI header to document this value. Such documentation may also optionally be supplied for non-private-use codes, though </p>

	<p>these must remain consistent with their IETF Internet Engineering Task Force definitions.</p>
xml:base	<p>provides a base URI reference with which applications can resolve relative URI references into absolute URI references.</p> <p>Status Optional</p> <p>Datatype teidata.pointer</p> <pre><div type="bibl"> <head>Bibliography</head> <listBibl xml:base="http://www.lib.ucdavis.edu/BWRP/Works/"> <bibl> <author> <name>London, Letitia Elizabeth</name> </author> <ref target="LandLVowOf.sgm"> <title>The Vow of the Peacock</title> </ref> </bibl> <bibl> <author> <name>Compton, Margaret Clephane</name> </author> <ref target="NortMIrene.sgm"> <title>Irene, a Poem in Six Cantos</title> </ref> </bibl> <bibl> <author> <name>Taylor, Jane</name> </author> <ref target="TaylJEssay.sgm"> <title>Essays in Rhyme on Morals and Manners</title> </ref> </bibl> </listBibl> </div></pre>
xml:space	<p>signals an intention about how white space should be managed by applications.</p> <p>Status Optional</p> <p>Datatype teidata.enumerated</p> <p>Legal values are:</p> <ul style="list-style-type: none"> default signals that the application's default white-space processing modes are acceptable preserve indicates the intent that applications preserve all white space <p>Note The XML specification provides further guidance on the use of this attribute. Note that many parsers may not handle xml:space correctly.</p>

11.3.22. *att.global.analytic*

att.global.analytic provides additional global attributes for associating specific analyses or interpretations with appropriate portions of a text. [17.2. Global Attributes for Simple Analyses 17.3. Spans and Interpretations]	
Module	analysis
Members	att.global TEI ab accMat activity add address affiliation app author availability back bibl birth body c change channel cl classCode constitution correspAction correspDesc country creation date death del derivation desc div domain editor encodingDesc event facsimile factuality fileDesc forename gap geo graphic handNote handNotes hi idno interaction interp interpGrp keywords label langUsage language lb lem licence link linkGrp listBibl listEvent listOrg listPerson listPlace listTranspose listWit locale location m metamark msDesc name note noteGrp objectType occupation org orgName p particDesc pb pc persName person phr physDesc place placeName postCode preparedness profileDesc ptr pubPlace publicationStmt publisher purpose q quote rdg ref restore revisionDesc rs s seg seriesStmt setting settingDesc settlement sex sourceDesc span spanGrp stamp street subst surface surfaceGrp surname teiHeader term text textClass textDesc title titleStmt transpose variantEncoding w witness

Attributes	<p>Attributes</p> <p>ana (analysis) indicates one or more elements containing interpretations of the element on which the <i>ana</i> attribute appears.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of <u>teidata.pointer</u> separated by white-space</p> <p>Note When multiple values are given, they may reflect either multiple divergent interpretations of an ambiguous text, or multiple mutually consistent interpretations of the same passage in different contexts.</p>
------------	---

11.3.23. att.global.change

att.global.change provides attributes allowing its member elements to specify one or more states or revision campaigns with which they are associated.	
Module	transcr
Members	<p><u>att.global</u>[<u>TEI</u> <u>ab</u> <u>accMat</u> <u>activity</u> <u>add</u> <u>address</u> <u>affiliation</u> <u>app</u> <u>author</u> <u>availability</u> <u>back</u> <u>bibl</u> <u>birth</u> <u>body</u> <u>c</u> <u>change</u> <u>channel</u> <u>cl</u> <u>classCode</u> <u>constitution</u> <u>correspAction</u> <u>correspDesc</u> <u>country</u> <u>creation</u> <u>date</u> <u>death</u> <u>del</u> <u>derivation</u> <u>desc</u> <u>div</u> <u>domain</u> <u>editor</u> <u>encodingDesc</u> <u>event</u> <u>facsimile</u> <u>factuality</u> <u>fileDesc</u> <u>forename</u> <u>gap</u> <u>geo</u> <u>graphic</u> <u>handNote</u> <u>handNotes</u> <u>hi</u> <u>idno</u> <u>interaction</u> <u>interp</u> <u>interpGrp</u> <u>keywords</u> <u>label</u> <u>langUsage</u> <u>language</u> <u>lb</u> <u>lem</u> <u>licence</u> <u>link</u> <u>linkGrp</u> <u>listBibl</u> <u>listEvent</u> <u>listOrg</u> <u>listPerson</u> <u>listPlace</u> <u>listTranspose</u> <u>listWit</u> <u>locale</u> <u>location</u> <u>m</u> <u>metamark</u> <u>msDesc</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>objectType</u> <u>occupation</u> <u>org</u> <u>orgName</u> <u>p</u> <u>particDesc</u> <u>pb</u> <u>pc</u> <u>persName</u> <u>person</u> <u>phr</u> <u>physDesc</u> <u>place</u> <u>placeName</u> <u>postCode</u> <u>preparedness</u> <u>profileDesc</u> <u>ptr</u> <u>pubPlace</u> <u>publicationStmt</u> <u>publisher</u> <u>purpose</u> <u>q</u> <u>quote</u> <u>rdg</u> <u>ref</u> <u>restore</u> <u>revisionDesc</u> <u>rs</u> <u>s</u> <u>seg</u> <u>seriesStmt</u> <u>setting</u> <u>settingDesc</u> <u>settlement</u> <u>sex</u> <u>sourceDesc</u> <u>span</u> <u>spanGrp</u> <u>stamp</u> <u>street</u> <u>subst</u> <u>surface</u> <u>surfaceGrp</u> <u>surname</u> <u>teiHeader</u> <u>term</u> <u>text</u> <u>textClass</u> <u>textDesc</u> <u>title</u> <u>titleStmt</u> <u>transpose</u> <u>variantEncoding</u> <u>w</u> <u>witness</u>]</p>
Attributes	<p>Attributes</p> <p>change points to one or more <u><change></u> elements documenting a state or revision campaign to which the element bearing this attribute and its children have been assigned by the encoder.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of <u>teidata.pointer</u> separated by white-space</p>

11.3.24. att.global.facs

att.global.facs provides attributes used to express correspondence between an element and all or part of a facsimile image or surface. [11.1. Digital Facsimiles]	
Module	transcr
Members	<p><u>att.global</u>[<u>TEI</u> <u>ab</u> <u>accMat</u> <u>activity</u> <u>add</u> <u>address</u> <u>affiliation</u> <u>app</u> <u>author</u> <u>availability</u> <u>back</u> <u>bibl</u> <u>birth</u> <u>body</u> <u>c</u> <u>change</u> <u>channel</u> <u>cl</u> <u>classCode</u> <u>constitution</u> <u>correspAction</u> <u>correspDesc</u> <u>country</u> <u>creation</u> <u>date</u> <u>death</u> <u>del</u> <u>derivation</u> <u>desc</u> <u>div</u> <u>domain</u> <u>editor</u> <u>encodingDesc</u> <u>event</u> <u>facsimile</u> <u>factuality</u> <u>fileDesc</u> <u>forename</u> <u>gap</u> <u>geo</u> <u>graphic</u> <u>handNote</u> <u>handNotes</u> <u>hi</u> <u>idno</u> <u>interaction</u> <u>interp</u> <u>interpGrp</u> <u>keywords</u> <u>label</u> <u>langUsage</u> <u>language</u> <u>lb</u> <u>lem</u> <u>licence</u> <u>link</u> <u>linkGrp</u> <u>listBibl</u> <u>listEvent</u> <u>listOrg</u> <u>listPerson</u> <u>listPlace</u> <u>listTranspose</u> <u>listWit</u> <u>locale</u> <u>location</u> <u>m</u> <u>metamark</u> <u>msDesc</u> <u>name</u> <u>note</u> <u>noteGrp</u> <u>objectType</u> <u>occupation</u> <u>org</u> <u>orgName</u> <u>p</u> <u>particDesc</u> <u>pb</u> <u>pc</u> <u>persName</u> <u>person</u> <u>phr</u> <u>physDesc</u> <u>place</u> <u>placeName</u> <u>postCode</u> <u>preparedness</u> <u>profileDesc</u> <u>ptr</u> <u>pubPlace</u> <u>publicationStmt</u> <u>publisher</u> <u>purpose</u> <u>q</u> <u>quote</u> <u>rdg</u> <u>ref</u> <u>restore</u> <u>revisionDesc</u> <u>rs</u> <u>s</u> <u>seg</u> <u>seriesStmt</u> <u>setting</u> <u>settingDesc</u> <u>settlement</u> <u>sex</u> <u>sourceDesc</u> <u>span</u> <u>spanGrp</u> <u>stamp</u> <u>street</u> <u>subst</u> <u>surface</u> <u>surfaceGrp</u> <u>surname</u> <u>teiHeader</u> <u>term</u> <u>text</u> <u>textClass</u> <u>textDesc</u> <u>title</u> <u>titleStmt</u> <u>transpose</u> <u>variantEncoding</u> <u>w</u> <u>witness</u>]</p>
Attributes	<p>Attributes</p> <p>facs (facsimile) points to one or more images, portions of an image, or surfaces which correspond to the current element.</p>

	Status	Optional
	Datatype	1-# occurrences of <code>teidata.pointer</code> separated by white-space

11.3.25. att.global.linking

att.global.linking provides a set of attributes for hypertextual linking. [16. Linking, Segmentation, and Alignment]		
Module	linking	
Members	att.global [TEI ab accMat activity add address affiliation app author availability back bibl birth body c change channel cl classCode constitution correspAction correspDesc country creation date death del derivation desc div domain editor encodingDesc event facsimile factuality fileDesc forename gap geo graphic handNote handNotes hi idno interaction interp interpGrp keywords label langUsage language lb lem licence link linkGrp listBibl listEvent listOrg listPerson listPlace listTranspose listWit locale location m metamark msDesc name note noteGrp objectType occupation org orgName p particDesc pb pc persName person phr physDesc place placeName postCode preparedness profileDesc ptr pubPlace publicationStmnt publisher purpose q quote rdg ref restore revisionDesc rs s seg seriesStmnt setting settingDesc settlement sex sourceDesc span spanGrp stamp street subst surface surfaceGrp surname teiHeader term text textClass textDesc title titleStmnt transpose variantEncoding w witness]	
Attributes	<div>Attributes</div> <div><div>corresp</div><div>(corresponds) points to elements that correspond to the current element in some way.</div><div>StatusOptional</div><div>Datatype1-# occurrences of <code>teidata.pointer</code> separated by white-space</div><div><pre><group> <text xml:id="t1-gl-t1" xml:lang="mi"> <body xml:id="t1-gl-t1-body1"> <div type="chapter"> <head>He Whakamaramatanga mo te Ture Hoko, Riihi hoki, i nga Whenua Maori, 1876.</head> <p>...</p> </div> </body> </text> <text xml:id="t1-gl-t2" xml:lang="en"> <body xml:id="t1-gl-t2-body1" corresp="#t1-gl-t1-body1"> <div type="chapter"> <head>An Act to regulate the Sale, Letting, and Disposal of Native Lands, 1876.</head> <p>...</p> </div> </body> </text> </group></pre></div><div>In this example a <code><group></code> contains two <code><text></code>s, each containing the same document in a different language. The correspondence is indicated using <i>corresp</i>. The language is indicated using <i>xml:lang</i>, whose value is inherited; both the tag with the <i>corresp</i> and the tag pointed to by the <i>corresp</i> inherit the value from their immediate parent.</div><div><pre><!-- In a placeography called "places.xml" --><place xml:id="LOND1" corresp="people.xml#LOND2 people.xml#GENI1"> <placeName>London</placeName> <desc>The city of London...</desc> </place> <!-- In a literary personography called "people.xml" --> <person xml:id="LOND2" corresp="places.xml#LOND1 #GENI1"> <persName type="lit">London</persName> <note> <p>Allegorical character representing the city of <placeName ref="places.xml#LOND1">London</placeName> </note> </person> <person xml:id="GENI1" corresp="places.xml#LOND1 #LOND2"> <persName type="lit">London's Genius</persName> <note></pre></div></div>	

```
<p>Personification of London's genius. Appears as an
allegorical character in mayoral shows.
</p>
</note>
</person>
```

In this example, a `<place>` element containing information about the city of London is linked with two `<person>` elements in a literary personography. This correspondence represents a slightly looser relationship than the one in the preceding example; there is no sense in which an allegorical character could be substituted for the physical city, or vice versa, but there is obviously a correspondence between them.

synch	<p>(synchronous) points to elements that are synchronous with the current element.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of <code>teidata.pointer</code> separated by white-space</p>
sameAs	<p>points to an element that is the same as the current element.</p> <p>Status Optional</p> <p>Datatype <code>teidata.pointer</code></p>
copyOf	<p>points to an element of which the current element is a copy.</p> <p>Status Optional</p> <p>Datatype <code>teidata.pointer</code></p> <p>Note Any content of the current element should be ignored. Its true content is that of the element being pointed at.</p>
next	<p>points to the next element of a virtual aggregate of which the current element is part.</p> <p>Status Optional</p> <p>Datatype <code>teidata.pointer</code></p> <p>Note It is recommended that the element indicated be of the same type as the element bearing this attribute.</p>
prev	<p>(previous) points to the previous element of a virtual aggregate of which the current element is part.</p> <p>Status Optional</p> <p>Datatype <code>teidata.pointer</code></p> <p>Note It is recommended that the element indicated be of the same type as the element bearing this attribute.</p>
exclude	<p>points to elements that are in exclusive alternation with the current element.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of <code>teidata.pointer</code> separated by white-space</p>
select	<p>selects one or more alternants; if one alternant is selected, the ambiguity or uncertainty is marked as resolved. If more than one alternant is selected, the degree of ambiguity or uncertainty is marked as reduced by the number of alternants not selected.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of <code>teidata.pointer</code> separated by white-space</p> <p>Note This attribute should be placed on an element which is superordinate to all of the alternants from which the selection is being made.</p>

11.3.26. att.global.rendition

att.global.rendition provides rendering attributes common to all elements in the TEI encoding scheme. [1.3.1.1.3. Rendition Indicators]	
Module	tei
Members	att.global [TEI ab accMat activity add address affiliation app author availability back bibl birth body c change channel cl classCode constitution correspAction correspDesc country creation date death del derivation desc div domain editor encodingDesc event facsimile factuality fileDesc forename gap geo graphic handNote handNotes hi idno interaction interp interpGrp keywords label langUsage language lb lem licence link linkGrp listBibl listEvent listOrg listPerson listPlace listTranspose listWit locale location m metamark msDesc name note noteGrp objectType occupation org orgName p particDesc pb pc persName person phr physDesc place placeName postCode preparedness profileDesc ptr pubPlace publicationStmnt publisher purpose q quote rdg ref restore revisionDesc rs s seg seriesStmnt setting settingDesc settlement sex sourceDesc span spanGrp stamp street subst surface surfaceGrp surname teiHeader term text textClass textDesc title titleStmnt transpose variantEncoding w witness]
Attributes	<p>Attributes</p> <p>rend (rendition) indicates how the element in question was rendered or presented in the source text.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of teidata.word separated by whitespace</p> <pre><head rend="align(center) case(allcaps)"> <lb/>To The <lb/>Duchesse <lb/>of <lb/>Newcastle, <lb/>On Her <lb/> <hi rend="case(mixed)">New Blazing-World</hi>. </head></pre> <p>Note These Guidelines make no binding recommendations for the values of the <i>rend</i> attribute; the characteristics of visual presentation vary too much from text to text and the decision to record or ignore individual characteristics varies too much from project to project. Some potentially useful conventions are noted from time to time at appropriate points in the Guidelines. The values of the <i>rend</i> attribute are a set of sequence-indeterminate individual tokens separated by whitespace.</p> <p>style contains an expression in some formal style definition language which defines the rendering or presentation used for this element in the source text</p> <p>Status Optional</p> <p>Datatype teidata.text</p> <pre><head style="text-align: center; font-variant: small-caps"> <lb/>To The <lb/>Duchesse <lb/>of <lb/>Newcastle, <lb/>On Her <lb/> <hi style="font-variant: normal">New Blazing-World</hi>. </head></pre> <p>Note Unlike the attribute values of <i>rend</i>, which uses whitespace as a separator, the <i>style</i> attribute may contain inline stylistic information concerning the source, not any particular output.</p> <p>The formal language in which values for this attribute are expressed may be specified using the <code><styleDefDecl></code> element in the TEI header.</p> <p>If <i>style</i> and <i>rendition</i> are both present on an element, then <i>style</i> overrides or complements <i>rendition</i>. <i>style</i> should not be used in conjunction with <i>rend</i>, because the latter does not employ a formal style definition language.</p> <p>rendition points to a description of the rendering or presentation used for this element in the source text.</p> <p>Status Optional</p>

	<p>Datatype 1–# occurrences of <code>teidata.pointer</code> separated by white-space</p> <pre><head rendition="#ac #sc"> <lb/>To The <lb/>Duchesse <lb/>of <lb/>Newcastle, <lb/>On Her <lb/> <hi rendition="#normal">New Blazing-World</hi>. </head> <!-- elsewhere... --> <rendition xml:id="sc" scheme="css">font-variant: small-caps</rendition> <rendition xml:id="normal" scheme="css">font-variant: normal</rendition> <rendition xml:id="ac" scheme="css">text-align: center</rendition></pre> <p>Note The <i>rendition</i> attribute is used in a very similar way to the <i>class</i> attribute defined for XHTML but with the important distinction that its function is to describe the appearance of the source text, not necessarily to determine how that text should be presented on screen or paper.</p> <p>If <i>rendition</i> is used to refer to a style definition in a formal language like CSS, it is recommended that it not be used in conjunction with <i>rend</i>. Where both <i>rendition</i> and <i>rend</i> are supplied, the latter is understood to override or complement the former.</p> <p>Each URI provided should indicate a <code><rendition></code> element defining the intended rendition in terms of some appropriate style language, as indicated by the <i>scheme</i> attribute.</p>
--	---

11.3.27. att.global.responsibility

att.global.responsibility provides attributes indicating the agent responsible for some aspect of the text, the markup or something asserted by the markup, and the degree of certainty associated with it. [1.3.1.1.4. Sources, certainty, and responsibility 3.5. Simple Editorial Changes 11.3.2.2. Hand, Responsibility, and Certainty Attributes 17.3. Spans and Interpretations 13.1.1. Linking Names and Their Referents]	
Module	tei
Members	att.global [TEI ab accMat activity add address affiliation app author availability back bibl birth body c change channel cl classCode constitution correspAction correspDesc country creation date death del derivation desc div domain editor encodingDesc event facsimile factuality fileDesc forename gap geo graphic handNote handNotes hi idno interaction interp interpGrp keywords label langUsage language lb lem licence link linkGrp listBibl listEvent listOrg listPerson listPlace listTranspose listWit locale location m metamark msDesc name note noteGrp objectType occupation org orgName p particDesc pb pc persName person phr physDesc place placeName postCode preparedness profileDesc ptr pubPlace publicationStmnt publisher purpose q quote rdg ref restore revisionDesc rs s seg seriesStmnt setting settingDesc settlement sex sourceDesc span spanGrp stamp street subst surface surfaceGrp surname teiHeader term text textClass textDesc title titleStmnt transpose variantEncoding w witness]
Attributes	<div>Attributes</div> <div><div>cert</div><div>(certainty) signifies the degree of certainty associated with the intervention or interpretation. Status Optional Datatype teidata.probCert</div></div> <div><div>resp</div><div>(responsible party) indicates the agency responsible for the intervention or interpretation, for example an editor or transcriber. Status Optional Datatype 1–# occurrences of teidata.pointer separated by white-space Note To reduce the ambiguity of a <i>resp</i> pointing directly to a person or organization, we recommend that <i>resp</i> be used to point not to an agent (<person> or <org>) but to a <respStmnt>, <author>, <editor> or similar element which clarifies the exact role played by the agent. Point-</div></div>

	ing to multiple <respStmt>s allows the encoder to specify clearly each of the roles played in part of a TEI file (creating, transcribing, encoding, editing, proofing etc.).
Example	<pre>Blessed are the <choice> <sic>cheesemakers</sic> <corr resp="#editor" cert="high">peacemakers</corr> </choice>: for they shall be called the children of God.</pre>
Example	<pre><!-- in the <text> ... --><lg> <!-- ... --> <l>Punkes, Panders, ba#e extortionizing sla<choice> <sic>n</sic> <corr resp="#JENSI_transcriber">u</corr> </choice>es,</l> </lg> <!-- in the <teiHeader> ... --> <!-- ... --> <respStmt xml:id="JENSI_transcriber"> <resp when="2014">Transcriber</resp> <name>Janelle Jenstad</name> </respStmt></pre>

11.3.28. att.global.source

att.global.source provides attributes used by elements to point to an external source. [1.3.1.1.4. Sources, certainty, and responsibility 3.3.3. Quotation 8.3.4. Writing]

Module	tei
Members	att.global[TEI ab accMat activity add address affiliation app author availability back bibl birth body c change channel cl classCode constitution correspAction correspDesc country creation date death del derivation desc div domain editor encodingDesc event facsimile factuality fileDesc forename gap geo graphic handNote handNotes hi idno interaction in-terp interpGrp keywords label langUsage language lb lem licence link linkGrp listBibl listEvent listOrg listPerson listPlace listTranspose listWit locale location m metamark msDesc name note noteGrp objectType occupation org orgName p particDesc pb pc persName person phr physDesc place placeName postCode preparedness profileDesc ptr pubPlace publicationStmt publisher purpose q quote rdg ref restore revisionDesc rs s seg seriesStmt setting settingDesc settlement sex sourceDesc span spanGrp stamp street subst surface surfaceGrp surname teiHeader term text textClass textDesc title titleStmt transpose variantEncoding w witness]
Attributes	<p>Attributes</p> <p>source specifies the source from which some aspect of this element is drawn.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of teidata.pointer separated by white-space</p> <p>Note The <i>source</i> attribute points to an external source. When used on elements describing schema components such as <schemaSpec> or <moduleRef> it identifies the source from which declarations for the components of the object being defined may be obtained.</p> <p>On other elements it provides a pointer to the bibliographical source from which a quotation or citation is drawn.</p> <p>In either case, the location may be provided using any form of URI, for example an absolute URI, a relative URI, or private scheme URI that is expanded to an absolute URI as documented in a <prefixDef>.</p> <p>If more than one location is specified, the default assumption is that the required source should be obtained by combining the resources indicated.</p>
Example	<pre><p> <!-- ... --> As Willard McCarty (<bibl xml:id="mcc_2012">2012, p.2</bibl>) tells us, <quote term.</quote> <!-- ... --> </p></pre>

Example	<pre> <p> <!-- ... --> <quote source="#chicago_15_ed">Grammatical theories are in flux, and the more we learn, the less we seem to know.</quote> <!-- ... --> </p> <!-- ... --> <bibl xml:id="chicago_15_ed"> <title level="m">The Chicago Manual of Style</title>, <edition>15th edition</edition>, <pubPlace>Chicago</pubPlace>: <publisher>University of Chicago Press</publisher> (<date>2003</date>), <biblScope unit="page">p.147</biblScope> </bibl> </pre>
Example	<pre><elementRef key="p" source="tei:2.0.1"/></pre> <p>Include in the schema an element named <code><p></code> available from the TEI P5 2.0.1 release.</p>
Example	<pre> <schemaSpec ident="myODD" source="mycompiledODD.xml"> <!-- further declarations specifying the components required --> </schemaSpec> </pre> <p>Create a schema using components taken from the file mycompiledODD.xml.</p>

11.3.29. att.handFeatures

att.handFeatures provides attributes describing aspects of the hand in which a manuscript is written. [11.3.2.1. Document Hands]

Module	tei												
Members	<u>handNote</u>												
Attributes	<p>Attributes</p> <table> <tr> <td>scribe</td><td> <p>gives a name or other identifier for the scribe believed to be responsible for this hand.</p> <p>Status Optional</p> <p>Datatype <u>teidata.name</u></p> </td></tr> <tr> <td>scribeRef</td><td> <p>points to a full description of the scribe concerned, typically supplied by a <u><person></u> element elsewhere in the description.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p> </td></tr> <tr> <td>script</td><td> <p>characterizes the particular script or writing style used by this hand, for example <i>secretary</i>, <i>copperplate</i>, <i>Chancery</i>, <i>Italian</i>, etc.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.name</u> separated by whitespace</p> </td></tr> <tr> <td>scriptRef</td><td> <p>points to a full description of the script or writing style used by this hand, typically supplied by a <u><scriptNote></u> element elsewhere in the description.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p> </td></tr> <tr> <td>medium</td><td> <p>describes the tint or type of ink, e.g. <i>brown</i>, or other writing medium, e.g. <i>pencil</i></p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.enumerated</u> separated by whitespace</p> </td></tr> <tr> <td>scope</td><td> <p>specifies how widely this hand is used in the manuscript.</p> <p>Status Optional</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Legal values sole</p> <p>are: only this hand is used throughout the manuscript</p> </td></tr> </table>	scribe	<p>gives a name or other identifier for the scribe believed to be responsible for this hand.</p> <p>Status Optional</p> <p>Datatype <u>teidata.name</u></p>	scribeRef	<p>points to a full description of the scribe concerned, typically supplied by a <u><person></u> element elsewhere in the description.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p>	script	<p>characterizes the particular script or writing style used by this hand, for example <i>secretary</i>, <i>copperplate</i>, <i>Chancery</i>, <i>Italian</i>, etc.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.name</u> separated by whitespace</p>	scriptRef	<p>points to a full description of the script or writing style used by this hand, typically supplied by a <u><scriptNote></u> element elsewhere in the description.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p>	medium	<p>describes the tint or type of ink, e.g. <i>brown</i>, or other writing medium, e.g. <i>pencil</i></p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.enumerated</u> separated by whitespace</p>	scope	<p>specifies how widely this hand is used in the manuscript.</p> <p>Status Optional</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Legal values sole</p> <p>are: only this hand is used throughout the manuscript</p>
scribe	<p>gives a name or other identifier for the scribe believed to be responsible for this hand.</p> <p>Status Optional</p> <p>Datatype <u>teidata.name</u></p>												
scribeRef	<p>points to a full description of the scribe concerned, typically supplied by a <u><person></u> element elsewhere in the description.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p>												
script	<p>characterizes the particular script or writing style used by this hand, for example <i>secretary</i>, <i>copperplate</i>, <i>Chancery</i>, <i>Italian</i>, etc.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.name</u> separated by whitespace</p>												
scriptRef	<p>points to a full description of the script or writing style used by this hand, typically supplied by a <u><scriptNote></u> element elsewhere in the description.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p>												
medium	<p>describes the tint or type of ink, e.g. <i>brown</i>, or other writing medium, e.g. <i>pencil</i></p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.enumerated</u> separated by whitespace</p>												
scope	<p>specifies how widely this hand is used in the manuscript.</p> <p>Status Optional</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Legal values sole</p> <p>are: only this hand is used throughout the manuscript</p>												

	ma- for this hand is used through most of the manuscript mi- nor this hand is used occasionally in the manuscript
Note	Usually either <i>script</i> or <i>scriptRef</i> , and similarly, either <i>scribe</i> or <i>scribeRef</i> , will be supplied.

11.3.30. *att.internetMedia*

att.internetMedia provides attributes for specifying the type of a computer resource using a standard taxonomy.	
Module	tei
Members	att.media[graphic] ptr ref
Attributes	<p>Attributes</p> <p>mimeType (MIME media type) specifies the applicable multimedia internet mail extension (MIME) media type</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of teidata.word separated by whitespace</p>
Example	<p>In this example <i>mimeType</i> is used to indicate that the URL points to a TEI XML file encoded in UTF-8.</p> <pre><ref mimeType="application/tei+xml; charset=UTF-8" target="http://sourceforge.net/p/tei/code/HEAD/tree/trunk/P5/Source/guidelines-en.xml"/></pre>
Note	This attribute class provides an attribute for describing a computer resource, typically available over the internet, using a value taken from a standard taxonomy. At present only a single taxonomy is supported, the Multipurpose Internet Mail Extensions (MIME) Media Type system. This typology of media types is defined by the Internet Engineering Task Force in RFC 2046. The list of types is maintained by the Internet Assigned Numbers Authority (IANA). The <i>mimeType</i> attribute must have a value taken from this list.

11.3.31. *att.lexicographic.normalized*

att.lexicographic.normalized provides attributes for usage within word-level elements in the analysis module and within lexicographic microstructure in the dictionaries module.	
Module	analysis
Members	att.linguistic[pc w]
Attributes	<p>Attributes</p> <p>norm (normalized) provides the normalized/standardized form of information present in the source text in a non-normalized form</p> <p>Status Optional</p> <p>Datatype teidata.text</p> <p>Normalization of part-of-speech information within a dictionary entry.</p> <pre><gramGrp> <pos norm="noun">n</pos> </gramGrp></pre> <p>Normalization of a source form in a tokenized historical corpus.</p> <pre><s> <w>for</w> <w norm="virtue's">vertues</w> <w>sake</w> </s> <s> <w norm="persuasion">perswasion</w> <w>of</w> <w norm="Unity">Vnitie</w> </s></pre> <p>Example of normalization from Aviso. Relation oder Zeitung. Wolfenbüttel, 1609. In: Deutsches Textarchiv.</p> <pre><s> <w norm="freiwillig">freywillig</w> <pc norm=","> <join="left"></pc> <w norm="unbedrängt">vnbedra#ngt</w></pre>

	<pre> <w norm="und">vnd</w> <w norm="unverhindert">vnuerhindert</w> </s> <w norm="Teil">Theyll</w> <w norm="Freude">Frewde</w> </pre> <p>orig (original) gives the original string or is the empty string when the element does not appear in the source text.</p> <p>Status Optional</p> <p>Datatype teidata.text</p> <p>Example from a language documentation project of the Mixtepec-Mixtec language (ISO 639-3: 'mix'). This is a use case where speakers spell something incorrectly but we would like to preserve it for any number of reasons, the use of <i>orig</i> is essential and could have uses for both the speaker to see past mistakes, researchers to get insight into how untrained speakers write their language instinctually (in contrast to prescribed convention), etc.:</p> <pre> <w orig="ntsa sia'i">ntsasia'i</w> </pre> <p>Example from the EarlyPrint project. Fragment of text where obvious errors have been corrected but the original forms remain recorded:</p> <pre> <w lemma="he" pos="pns" xml:id="blafj-003-a-0950">he</w> <w lemma="have" pos="vvz" xml:id="blafj-003-a-0960">hath</w> <w lemma="bring" pos="vvn" xml:id="blafj-003-a-0970">brought</w> <w lemma="forth" pos="av" xml:id="blafj-003-a-0980" orig="sorth">forth</w> </pre> <p>An example from the EarlyPrint project showing the use of both <i>norm</i> and <i>orig</i>. The <i>orig</i> attribute preserves the original version (sometimes with spelling errors, often with printer abbreviations), the element content resolves printer abbreviations but retains the original orthography, and the <i>norm</i> attribute holds normalized values:</p> <pre> <w lemma="commandment" pos="nl" norm="commandment" xml:id="b9avr-018-a-7720" orig="commandeme#t">commandement</w> </pre>
Note	It needs to be stressed that the two attributes in this class are meant for strictly lexicographic and linguistic uses, and not for editorial interventions. For the latter, the mechanism based on <code><choice></code> , <code><orig></code> , and <code><reg></code> needs to be employed.

11.3.32. *att.linguistic*

att.linguistic provides a set of attributes concerning linguistic features of tokens, for usage within token-level elements, specifically <code><w></code> and <code><pc></code> in the analysis module. [17.4.2. Lightweight Linguistic Annotation]	
Module	analysis
Members	<code>pc</code> <code>w</code>
Attributes	<p>Attributes att.lexicographic.normalized (<code>@norm</code>, <code>@orig</code>)</p> <p>lemma provides a lemma (base form) for the word, typically uninflected and serving both as an identifier (e.g. in dictionary contexts, as a headword), and as a basis for potential inflections.</p> <p>Status Optional</p> <p>Datatype teidata.text</p> <pre> <w lemma="wife">wives</w> <w lemma="Arznei">Artzeneyen</w> </pre> <p>lemmaRef provides a pointer to a definition of the lemma for the word, for example in an online lexicon.</p>

	<div><div>StatusOptional</div><div>Datatype<u>teidata.pointer</u></div><div><pre><w type="verb" lemma="hit" lemmaRef="http://www.example.com/lexicon/hitvb.xml">hitt<m type="suffix">ing</m> </w></pre></div></div>
pos	<div><p>(part of speech) indicates the part of speech assigned to a token (i.e. information on whether it is a noun, adjective, or verb), usually according to some official reference vocabulary (e.g. for German: STTS, for English: CLAWS, for Polish: NKJP, etc.).</p><div><div>StatusOptional</div><div>Datatype<u>teidata.text</u></div><div>The German sentence ‘Wir fahren in den Urlaub.’ tagged with the Stuttgart-Tuebingen-Tagset (STTS).</div><div><pre><s> <w pos="PPER">Wir</w> <w pos="VVFIN">fahren</w> <w pos="APPR">in</w> <w pos="ART">den</w> <w pos="NN">Urlaub</w> <w pos="\$. ">.</w> </s></pre></div><div>The English sentence ‘We’re going to Brazil.’ tagged with the CLAWS-5 tagset, arranged inline (with significant whitespace).</div><div><pre><p><w pos="PNP">We</w><w pos="VBB">'re</w> <w pos="VVG">going</w> <w pos="PRP">to</w> <w po</pre></div><div>The English sentence ‘We’re going on vacation to Brazil for a month!’ tagged with the CLAWS-7 tagset and arranged sequentially.</div><div><pre><p> <w pos="PPIS2">We</w> <w pos="VBR">'re</w> <w pos="VVG">going</w> <w pos="II">on</w> <w pos="NN1">vacation</w> <w pos="II">to</w> <w pos="NPl">Brazil</w> <w pos="IF">for</w> <w pos="ATl">a</w> <w pos="NNTl">month</w> <pc pos="!">!</pc> </p></pre></div></div></div>
msd	<div><p>(morphosyntactic description) supplies morphosyntactic information for a token, usually according to some official reference vocabulary (e.g. for German: STTS-large tagset; for a feature description system designed as (pragmatically) universal, see Universal Features).</p><div><div>StatusOptional</div><div>Datatype<u>teidata.text</u></div><div><pre><ab> <w pos="PPER" msd="1.Pl.*.Nom">Wir</w> <w pos="VVFIN" msd="1.Pl.Pres.Ind">fahren</w> <w pos="APPR" msd="--">in</w> <w pos="ART" msd="Def.Masc.Akk.Sg">den</w> <w pos="NN" msd="Masc.Akk.Sg">Urlaub</w> <pc pos="\$. ">.</pc> msd="--">.</pc> </ab></pre></div></div></div>
join	<div><p>when present, it provides information on whether the token in question is adjacent to another, and if so, on which side. The definition of this attribute is adapted from ISO MAF (Morpho-syntactic Annotation Framework), ISO 24611:2012.</p><div><div>StatusOptional</div></div></div>

	<p>Datatype <u>teidata.text</u></p> <p>Legal values no</p> <p>are: (the token is not adjacent to another)</p> <p>left (there is no whitespace on the left side of the token)</p> <p>right (there is no whitespace on the right side of the token)</p> <p>both (there is no whitespace on either side of the token)</p> <p>overlap (the token overlaps with another; other devices (specifying the extent and the area of overlap) are needed to more precisely locate this token in the character stream)</p> <p>The example below assumes that the lack of whitespace is marked redundantly, by using the appropriate values of <i>join</i>.</p> <pre><s> <pc join="right">"</pc> <w join="left">Friends</w> <w>will</w> <w>be</w> <w join="right">friends</w> <pc join="both">.</pc> <pc join="left">"</pc> </s></pre> <p>Note that a project may make a decision to only indicate lack of whitespace in one direction, or do that non-redundantly. The existing proposal is the broadest possible, on the assumption that we adopt the "streamable view", where all the information on the current element needs to be represented locally.</p> <p>The English sentence 'We're going on vacation.' tagged with the CLAWS-5 tagset, arranged sequentially, tagged on the assumption that only the lack of the preceding whitespace is indicated.</p> <pre><p> <w pos="PNP">We</w> <w pos="VBB" join="left">'re</w> <w pos="VVG">going</w> <w pos="PRP">on</w> <w pos="NN1">vacation</w> <pc pos="PUN" join="left">.</pc> </p></pre>
Note	These attributes make it possible to encode simple language corpora and to add a layer of linguistic information to any tokenized resource. See section 17.4.2. Lightweight Linguistic Annotation for discussion.

11.3.33. *att.locatable*

att.locatable provides attributes for referencing locations by pointing to entries in a canonical list of places. [2.3.9. The Unit Declaration 13.3.4.3. States, Traits, and Events]	
Module	<u>tei</u>
Members	<u>event</u>
Attributes	<p>Attributes</p> <p>where indicates one or more locations by pointing to a <u><place></u> element or other canonical description.</p> <p>Status Optional</p>

	Datatype 1–# occurrences of <u>teidata.pointer</u> separated by white-space
--	--

11.3.34. *att.media*

att.media provides attributes for specifying display and related properties of external media.	
Module	tei
Members	<u>graphic</u>
Attributes	<p>Attributes <u>att.internetMedia</u> (@mimeType)</p> <p>width Where the media are displayed, indicates the display width Status Optional Datatype <u>teidata.outputMeasurement</u></p> <p>height Where the media are displayed, indicates the display height Status Optional Datatype <u>teidata.outputMeasurement</u></p> <p>scale Where the media are displayed, indicates a scale factor to be applied when generating the desired display size Status Optional Datatype <u>teidata.numeric</u></p>

11.3.35. *att.msExcerpt*

att.msExcerpt (manuscript excerpt) provides attributes used to describe excerpts from a manuscript placed in a description thereof. [10.6. Intellectual Content]	
Module	msdescription
Members	<u>quote</u>
Attributes	<p>Attributes</p> <p>defective indicates whether the passage being quoted is defective, i.e. incomplete through loss or damage. Status Optional Datatype <u>teidata.xTruthValue</u></p>
Note	In the case of an incipit, indicates whether the incipit as given is defective, i.e. the first words of the text as preserved, as opposed to the first words of the work itself. In the case of an explicit, indicates whether the explicit as given is defective, i.e. the final words of the text as preserved, as opposed to what the closing words would have been had the text of the work been whole.

11.3.36. *att.naming*

att.naming provides attributes common to elements which refer to named persons, places, organizations etc. [3.6.1. Referring Strings 13.3.6. Names and Nyms]	
Module	tei
Members	<u>att.personal</u> [<u>forename</u> <u>name</u> <u>orgName</u> <u>persName</u> <u>placeName</u> <u>surname</u>] <u>affiliation</u> <u>author</u> <u>birth</u> <u>country</u> <u>death</u> <u>editor</u> <u>event</u> <u>occupation</u> <u>pubPlace</u> <u>rs</u> <u>settlement</u>
Attributes	<p>Attributes <u>att.canonical</u> (@key, @ref)</p> <p>role may be used to specify further information about the entity referenced by this name in the form of a set of whitespace-separated values, for example the occupation of a person, or the status of a place. Status Optional Datatype 1–# occurrences of <u>teidata.enumerated</u> separated by whitespace</p>

	<p>nymRef (reference to the canonical name) provides a means of locating the canonical form (<i>nym</i>) of the names associated with the object named by the element bearing it.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of teidata.pointer separated by whitespace</p> <p>Note The value must point directly to one or more XML elements by means of one or more URIs, separated by whitespace. If more than one is supplied, the implication is that the name is associated with several distinct canonical names.</p>
--	--

11.3.37. *att.notated*

att.notated provides attributes to indicate any specialised notation used for element content.	
Module	tei
Members	c cl m phr quote s seg w
Attributes	<p>Attributes</p> <p>notation names the notation used for the content of the element.</p> <p>Status Optional</p> <p>Datatype teidata.enumerated</p>

11.3.38. *att.personal*

att.personal (attributes for components of names usually, but not necessarily, personal names) common attributes for those elements which form part of a name usually, but not necessarily, a personal name. [13.2.1. Personal Names]	
Module	tei
Members	forename name orgName persName placeName surname
Attributes	<p>Attributes att.naming (@role, @nymRef) (att.canonical (@key, @ref))</p> <p>full indicates whether the name component is given in full, as an abbreviation or simply as an initial.</p> <p>Status Optional</p> <p>Datatype teidata.enumerated</p> <p>Legal values yes</p> <p>are: (yes) the name component is spelled out in full. [Default]</p> <p>abb (abbreviated) the name component is given in an abbreviated form.</p> <p>init (initial letter) the name component is indicated only by one initial.</p> <p>sort (sort) specifies the sort order of the name component in relation to others within the name.</p> <p>Status Optional</p> <p>Datatype teidata.count</p>

11.3.39. *att.placement*

att.placement provides attributes for describing where on the source page or object a textual element appears. [3.5.3. Additions, Deletions, and Omissions 11.3.1.4. Additions and Deletions]	
Module	tei
Members	add label metamark note noteGrp

Attributes	<p>Attributes</p> <p>place specifies where this item is placed.</p> <p>Status Recommended</p> <p>Datatype 1–# occurrences of <code>teidata.enumerated</code> separated by whitespace</p> <p>Suggested values include:</p> <ul style="list-style-type: none"> top at the top of the page bottom at the foot of the page margin in the margin (left, right, or both) opposite on the opposite, i.e. facing, page overleaf on the other side of the leaf above above the line right to the right, e.g. to the right of a vertical line of text, or to the right of a figure below below the line left to the left, e.g. to the left of a vertical line of text, or to the left of a figure end at the end of e.g. chapter or volume. in-line within the body of the text. in-space a predefined space, for example left by an earlier scribe. <pre><add place="margin">[An addition written in the margin]</add> <add place="bottom opposite">[An addition written at the foot of the current page and also on the facing page]</add> <note place="bottom">Ibid, p.7</note></pre>
------------	--

11.3.40. att.pointing

att.pointing provides a set of attributes used by all elements which point to other elements by means of one or more URI references. [1.3.1.1.2. Language Indicators 3.7. Simple Links and Cross-References]	
Module	tei
Members	<code>att.pointing.group</code> <code>linkGrp</code> <code>licence</code> <code>link</code> <code>note</code> <code>noteGrp</code> <code>ptr</code> <code>ref</code> <code>span</code> <code>term</code>
Attributes	<p>Attributes</p> <p>targetLang specifies the language of the content to be found at the destination referenced by <i>target</i>, using a ‘language tag’ generated according to BCP 47.</p> <p>Status Optional</p> <p>Datatype <code>teidata.language</code></p> <p>Schematron <code><sch:rule context="tei:*[not(self::tei:schemaSpec)][@targetLang]"></code> <code><sch:assert test="@target">@targetLang should only</code></p>

	<p>be used on <code><sch:name/></code> if <code>@target</code> is specified.<code></sch:assert></code> <code></sch:rule></code></p> <pre><linkGrp xml:id="pol-swh_aln_2.1-linkGrp"> <ptr xml:id="pol-swh_aln_2.1.1-ptr" target="pol/UDHR/text.xml#pol_txt_1-head" type="tuv" targetLang="pl"/> <ptr xml:id="pol-swh_aln_2.1.2-ptr" target="swh/UDHR/text.xml#swh_txt_1-head" type="tuv" targetLang="sw"/> </linkGrp></pre> <p>In the example above, the <code><linkGrp></code> combines pointers at parallel fragments of the <i>Universal Declaration of Human Rights</i>: one of them is in Polish, the other in Swahili.</p> <p>Note The value must conform to BCP 47. If the value is a private use code (i.e., starts with x- or contains -x-), a <code><language></code> element with a matching value for its <i>ident</i> attribute should be supplied in the TEI header to document this value. Such documentation may also optionally be supplied for non-private-use codes, though these must remain consistent with their IETF Internet Engineering Task Force definitions.</p>
target	<p>specifies the destination of the reference by supplying one or more URI References</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of <code>teidata.pointer</code> separated by whitespace</p> <p>Note One or more syntactically valid URI references, separated by whitespace. Because whitespace is used to separate URIs, no whitespace is permitted inside a single URI. If a whitespace character is required in a URI, it should be escaped with the normal mechanism, e.g. <code>TEI%20Consortium</code>.</p>
evaluate	<p>(evaluate) specifies the intended meaning when the target of a pointer is itself a pointer.</p> <p>Status Optional</p> <p>Datatype <code>teidata.enumerated</code></p> <p>Legal values all are:</p> <ul style="list-style-type: none"> one if the element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer. one if the element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer. none no further evaluation of targets is carried out beyond that needed to find the element specified in the pointer's target. <p>Note If no value is given, the application program is responsible for deciding (possibly on the basis of user input) how far to trace a chain of pointers.</p>

11.3.41. att.pointing.group

att.pointing.group provides a set of attributes common to all elements which enclose groups of pointer elements. [16. Linking, Segmentation, and Alignment]

Module	tei
Members	<code>linkGrp</code>

Attributes	<p>Attributes <u>att.pointing</u> (@targetLang, @target, @evaluate) <u>att.typed</u> (@type, @subtype)</p> <p>domains optionally specifies the identifiers of the elements within which all elements indicated by the contents of this element lie.</p> <p>Status Optional</p> <p>Datatype 2-# occurrences of <u>teidata.pointer</u> separated by whitespace</p> <p>Note If this attribute is supplied every element specified as a target must be contained within the element or elements named by it. An application may choose whether or not to report failures to satisfy this constraint as errors, but may not access an element of the right identifier but in the wrong context. If this attribute is not supplied, then target elements may appear anywhere within the target document.</p> <p>targFunc (target function) describes the function of each of the values of the <i>target</i> attribute of the enclosed <u><link></u>, <u><join></u>, or <u><alt></u> tags.</p> <p>Status Optional</p> <p>Datatype 2-# occurrences of <u>teidata.word</u> separated by whitespace</p> <p>Note The number of separate values must match the number of values in the <i>target</i> attribute in the enclosed <u><link></u>, <u><join></u>, or <u><alt></u> tags (an intermediate <u><ptr></u> element may be needed to accomplish this). It should also match the number of values in the <i>domains</i> attribute, of the current element, if one has been specified.</p>
-------------------	---

11.3.42. att.ranging

att.ranging provides attributes for describing numerical ranges.	
Module	tei
Members	<u>att.dimensions</u> [<u>add</u> <u>birth</u> <u>date</u> <u>death</u> <u>del</u> <u>gap</u> <u>restore</u> <u>subst</u>]
Attributes	<p>Attributes</p> <p>atLeast gives a minimum estimated value for the approximate measurement.</p> <p>Status Optional</p> <p>Datatype <u>teidata.numeric</u></p> <p>atMost gives a maximum estimated value for the approximate measurement.</p> <p>Status Optional</p> <p>Datatype <u>teidata.numeric</u></p> <p>min where the measurement summarizes more than one observation or a range, supplies the minimum value observed.</p> <p>Status Optional</p> <p>Datatype <u>teidata.numeric</u></p> <p>max where the measurement summarizes more than one observation or a range, supplies the maximum value observed.</p> <p>Status Optional</p> <p>Datatype <u>teidata.numeric</u></p> <p>confidence specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by <i>min</i> and <i>max</i>, or the proportion of observed values that fall within that range.</p> <p>Status Optional</p> <p>Datatype <u>teidata.probability</u></p>
Example	<pre>The MS. was lost in transmission by mail from <del rend="overstrike"> <gap reason="illegible" extent="one or two letters" atLeast="1" atMost="2" unit="chars"/> Philadelphia to the Graphic office, New York.</pre>

11.3.43. att.resourced

att.resourced provides attributes by which a resource (such as an externally held media file) may be located.	
Module	tei
Members	<u>graphic</u>
Attributes	<p>Attributes</p> <p>url (uniform resource locator) specifies the URL from which the media concerned may be obtained.</p> <p>Status Required</p> <p>Datatype <u>teidata.pointer</u></p>

11.3.44. att.segLike

att.segLike provides attributes for elements used for arbitrary segmentation. [16.3. Blocks, Segments, and Anchors 17.1. Linguistic Segment Categories]	
Module	tei
Members	<u>c</u> <u>cl</u> <u>m</u> <u>pc</u> <u>phr</u> <u>s</u> <u>seg</u> <u>w</u>
Attributes	<p>Attributes <u>att.datcat</u> (@datcat, @valueDatcat) <u>att.fragmentable</u> (@part)</p> <p>function (function) characterizes the function of the segment.</p> <p>Status Optional</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Note Attribute values will often vary depending on the type of element to which they are attached. For example, a <u><cl></u>, may take values such as coordinate, subject, adverbial etc. For a <u><phr></u>, such values as subject, predicate etc. may be more appropriate. Such constraints will typically be implemented by a project-defined customization.</p>

11.3.45. att.sortable

att.sortable provides attributes for elements in lists or groups that are sortable, but whose sorting key cannot be derived mechanically from the element content. [9.1. Dictionary Body and Overall Structure]	
Module	tei
Members	<u>bibl</u> <u>corresp</u> <u>Action</u> <u>event</u> <u>idno</u> <u>listBibl</u> <u>listEvent</u> <u>listOrg</u> <u>listPerson</u> <u>listPlace</u> <u>listWit</u> <u>msDesc</u> <u>org</u> <u>person</u> <u>place</u> <u>term</u> <u>witness</u>
Attributes	<p>Attributes</p> <p>sortKey supplies the sort key for this element in an index, list or group which contains it.</p> <p>Status Optional</p> <p>Datatype <u>teidata.word</u></p> <div data-bbox="716 1550 1385 1648" data-label="Text"> <pre>David's other principal backer, Josiah ha-Kohen <index indexName="NAMES"> <term sortKey="Azarya_Josiah_Kohen">Josiah ha-Kohen b. Azarya</term> </index> b. Azarya, son of one of the last gaons of Sura was David's own first cousin.</pre> </div> <p>Note The sort key is used to determine the sequence and grouping of entries in an index. It provides a sequence of characters which, when sorted with the other values, will produced the desired order; specifics of sort key construction are application-dependent</p> <p>Dictionary order often differs from the collation sequence of machine-readable character sets; in English-language dictionaries, an entry for <i>4-H</i> will often appear alphabetized under 'fourh', and <i>McCoy</i> may be alphabetized under 'maccoy', while <i>A1</i>, <i>A4</i>, and <i>A5</i> may all appear in numeric order 'alphabetized' between 'a' and 'AA'. The sort key is required if the orthography of</p>

the dictionary entry does not suffice to determine its location.

11.3.46. *att.spanning*

att.spanning provides attributes for elements which delimit a span of text by pointing mechanisms rather than by enclosing it. [11.3.1.4. Additions and Deletions 1.3.1. Attribute Classes]

Module	tei
Members	<u>lb</u> <u>metamark</u> <u>pb</u>
Attributes	<p>Attributes</p> <p>spanTo indicates the end of a span initiated by the element bearing this attribute.</p> <p>Status Optional</p> <p>Datatype <u>teidata.pointer</u></p> <p>Schematron The @spanTo attribute must point to an element following the current element <sch:rule context="tei:*[@spanTo]"> <sch:assert test="id(substring(@spanTo,2)) and following::*[@xml:id=substring(current()/@spanTo,2)]">The element indicated by @spanTo (<sch:value-of select="@spanTo"/>) must follow the current element <sch:name/> </sch:assert> </sch:rule></p>
Note	The span is defined as running in document order from the start of the content of the pointing element to the end of the content of the element pointed to by the <i>spanTo</i> attribute (if any). If no value is supplied for the attribute, the assumption is that the span is coextensive with the pointing element. If no content is present, the assumption is that the starting point of the span is immediately following the element itself.

11.3.47. *att.textCritical*

att.textCritical defines a set of attributes common to all elements representing variant readings in text critical work. [12.1. The Apparatus Entry, Readings, and Witnesses]

Module	textcrit
Members	<u>lem</u> <u>rdg</u>
Attributes	<p>Attributes <u>att.written</u> (@hand) <u>att.typed</u> (type, @subtype)</p> <p>type classifies the reading according to some useful typology.</p> <p>Status Optional</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Sample values include: sub- stan-(substantive) the reading offers a substantive variant.</p> <p>or- tho- (orthographic) the reading differs only orthographically, not in substance, from other readings.</p> <p>cause classifies the cause for the variant reading, according to any appropriate typology of possible origins.</p> <p>Status Optional</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Sample values include: homeoteleuton homeoarchy</p>

	<p>pa- le- o- graph- ic- Confu- sion</p> <p>hap- log- ra- phy</p> <p>dit- tog- ra- phy</p> <p>falseEmen- da- tion</p>
	<p>varSeq (variant sequence) provides a number indicating the position of this reading in a sequence, when there is reason to presume a sequence to the variants.</p> <p>Status Optional</p> <p>Datatype <u>teidata.count</u></p> <p>Note Different variant sequences could be coded with distinct number trails: 1-2-3 for one sequence, 5-6-7 for another. More complex variant sequences, with (for example) multiple branchings from single readings, may be expressed through the <join> element.</p> <p>require points to other readings that are required when adopting the current reading or lemma.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by white-space</p>
Note	This element class defines attributes inherited by <rdg>, <lem>, and <rdgGrp>.

11.3.48. att.timed

att.timed provides attributes common to those elements which have a duration in time, expressed either absolutely or by reference to an alignment map. [8.3.5. Temporal Information]	
Module	tei
Members	<u>gap</u>
Attributes	<p>Attributes</p> <p>start indicates the location within a temporal alignment at which this element begins.</p> <p>Status Optional</p> <p>Datatype <u>teidata.pointer</u></p> <p>Note If no value is supplied, the element is assumed to follow the immediately preceding element at the same hierarchic level.</p> <p>end indicates the location within a temporal alignment at which this element ends.</p> <p>Status Optional</p> <p>Datatype <u>teidata.pointer</u></p>

	Note	If no value is supplied, the element is assumed to precede the immediately following element at the same hierarchic level.
--	-------------	--

11.3.49. *att.transcriptional*

att.transcriptional provides attributes specific to elements encoding authorial or scribal intervention in a text when transcribing manuscript or similar sources. [11.3.1.4. Additions and Deletions]		
Module	tei	
Members	add del restore subst	
Attributes	<p>Attributes <u>att.editLike</u> (@evidence, @instant) <u>att.written</u> (@hand)</p> <p>status indicates the effect of the intervention, for example in the case of a deletion, strikeouts which include too much or too little text, or in the case of an addition, an insertion which duplicates some of the text already present.</p> <p>Status Optional</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Sample values include:</p> <p>duplicate all of the text indicated as an addition duplicates some text that is in the original, whether the duplication is word-for-word or less exact.</p> <p>duplicate-part part of the text indicated as an addition duplicates some text that is in the original</p> <p>excess Some text at the beginning of the deletion is marked as deleted even though it clearly should not be deleted.</p> <p>excess-end The text at the end of the deletion is marked as deleted even though it clearly should not be deleted.</p> <p>short-start some text at the beginning of the deletion is not marked as deleted even though it clearly should be.</p> <p>short-end some text at the end of the deletion is not marked as deleted even though it clearly should be.</p> <p>partial some text in the deletion is not marked as deleted even though it clearly should be.</p> <p>unremarkable the deletion is not faulty.[Default]</p> <p>Note Status information on each deletion is needed rather rarely except in critical editions from authorial manuscripts; status information on additions is even less common.</p> <p>Marking a deletion or addition as faulty is inescapably an interpretive act; the usual test applied in practice is the linguistic acceptability of the text with and without the letters or words in question.</p>	
	cause	documents the presumed cause for the intervention.

	Status Optional Datatype <u>teidata.enumerated</u> (sequence) assigns a sequence number related to the order in which the encoded features carrying this attribute are believed to have occurred. Status Optional Datatype <u>teidata.count</u>
--	---

11.3.50. *att.typed*

att.typed provides attributes that can be used to classify or subclassify elements in any way. [1.3.1. Attribute Classes 17.1.1. Words and Above 3.6.1. Referring Strings 3.7. Simple Links and Cross-References 3.6.5. Abbreviations and Their Expansions 3.13.1. Core Tags for Verse 7.2.5. Speech Contents 4.1.1. Un-numbered Divisions 4.1.2. Numbered Divisions 4.2.1. Headings and Trailers 4.4. Virtual Divisions 13.3.2.3. Personal Relationships 11.3.1.1. Core Elements for Transcriptional Work 16.1.1. Pointers and Links 16.3. Blocks, Segments, and Anchors 12.2. Linking the Apparatus to the Text 22.5.1.2. Defining Content Models: RELAX NG 8.3. Elements Unique to Spoken Texts 23.3.1.3. Modification of Attribute and Attribute Value Lists]

Attributes	<p>Attributes</p> <p>type characterizes the element in some sense, using any convenient classification scheme or typology. Status Optional Datatype <u>teidata.enumerated</u></p> <pre><div type="verse"> <head>Night in Tarras</head> <lg type="stanza"> <l>At evening tramping on the hot white road</l> <l>...</l> </lg> <lg type="stanza"> <l>A wind sprang up from nowhere as the sky</l> <l>...</l> </lg> </div></pre> <p>Note The <i>type</i> attribute is present on a number of elements, not all of which are members of att.typed, usually because these elements restrict the possible values for the attribute in a specific way.</p> <p>subtype (subtype) provides a sub-categorization of the element, if needed Status Optional Datatype <u>teidata.enumerated</u></p> <p>Note The <i>subtype</i> attribute may be used to provide any sub-classification for the element additional to that provided by its <i>type</i> attribute.</p>
Schematron	<sch:rule context="tei:*[@subtype]"> <sch:assert test="@type">The <sch:name/> element should not be categorized in detail with @subtype unless also categorized in general with @type</sch:assert> </sch:rule>
Note	When appropriate, values from an established typology should be used. Alternatively a typology may be defined in the associated TEI header. If values are to be taken from a project-specific list, this should be defined using the <valList> element in the project-specific schema description, as described in 23.3.1.3. Modification of Attribute and Attribute Value Lists .

11.3.51. *att.witnessed*

att.witnessed provides attributes used to identify the witnesses supporting a particular reading in a critical apparatus. [12.1. The Apparatus Entry, Readings, and Witnesses]	
Module	textcrit
Members	lem rdg
Attributes	<p>Attributes</p> <p>wit (witness or witnesses) contains a space-delimited list of one or more pointers indicating the witnesses which attest to a given reading.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of teidata.pointer separated by white-space</p> <p>Note If the apparatus contains readings only for a single witness, this attribute may be consistently omitted. This attribute may occur both within an apparatus gathering variant readings in the transcription of an individual witness and within an apparatus gathering readings from different witnesses. Additional descriptions or alternative versions of the sigla referenced may be supplied as the content of a child <code><wit></code> element.</p>

11.3.52. *att.written*

att.written provides attributes to indicate the hand in which the content of an element was written in the source being transcribed. [1.3.1. Attribute Classes]	
Module	tei
Members	att.textCritical [lem rdg] att.transcriptional [add del restore subst] ab div hi label note noteGrp p seg text
Attributes	<p>Attributes</p> <p>hand points to a <code><handNote></code> element describing the hand considered responsible for the content of the element concerned.</p> <p>Status Optional</p> <p>Datatype teidata.pointer</p>

11.4. Macros

11.4.1. *macro.limitedContent*

macro.limitedContent (paragraph content) defines the content of prose elements that are not used for transcription of extant materials. [1.3. The TEI Class System]	
Module	tei
Used by	desc
Content model	<pre><content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.limitedPhrase"/> <classRef key="model.inter"/> </alternate> </content></pre>
Declaration	<pre>macro.limitedContent = (text model.limitedPhrase model.inter)*</pre>

11.4.2. *macro.paraContent*

macro.paraContent (paragraph content) defines the content of paragraphs and similar elements. [1.3. The TEI Class System]	
Module	tei

Used by	ab add del hi p ref restore seg title
Content model	<pre> <content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.gLike"/> <classRef key="model.phrase"/> <classRef key="model.inter"/> <classRef key="model.global"/> <elementRef key="lg"/> <classRef key="model.lLike"/> </alternate> </content> </pre>
Declaration	<pre> macro.paraContent = (text model.gLike model.phrase model.inter model.global lg model.lLike)* </pre>

11.4.3. *macro.phraseSeq*

macro.phraseSeq (phrase sequence) defines a sequence of character data and phrase-level elements. [1.4.1. Standard Content Models]	
Module	tei
Used by	affiliation author birth cl country death editor forename label name objectType orgName persName phr placeName pubPlace publisher rs s settlement sex stamp street surname term
Content model	<pre> <content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.gLike"/> <classRef key="model.attributable"/> <classRef key="model.phrase"/> <classRef key="model.global"/> </alternate> </content> </pre>
Declaration	<pre> macro.phraseSeq = (text model.gLike model.attributable model.phrase model.global) * </pre>

11.4.4. *macro.phraseSeq.limited*

macro.phraseSeq.limited (limited phrase sequence) defines a sequence of character data and those phrase-level elements that are not typically used for transcribing extant documents. [1.4.1. Standard Content Models]	
Module	tei
Used by	activity channel classCode constitution derivation domain factuality interaction language local preparedness purpose span
Content model	<pre> <content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.limitedPhrase"/> <classRef key="model.global"/> </alternate> </content> </pre>
Declaration	<pre> macro.phraseSeq.limited = (text model.limitedPhrase model.global) * </pre>

11.4.5. *macro.specialPara*

macro.specialPara ('special' paragraph content) defines the content model of elements such as notes or list items, which either contain a series of component-level elements or else have the same structure as a paragraph, containing a series of phrase-level and inter-level elements. [1.3. The TEI Class System]

Module	tei
Used by	accMat change handNote licence metamark note occupation q quote
Content model	<pre> <content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.gLike"/> <classRef key="model.phrase"/> <classRef key="model.inter"/> <classRef key="model.divPart"/> <classRef key="model.global"/> </alternate> </content> </pre>
Declaration	<pre> macro.specialPara = (text model.gLike model.phrase model.inter model.divPart model.global)* </pre>

11.4.6. *macro.xtext*

macro.xtext (extended text) defines a sequence of character data and gaiji elements.	
Module	tei
Used by	c
Content model	<pre> <content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.gLike"/> </alternate> </content> </pre>
Declaration	<pre> macro.xtext = (text model.gLike) * </pre>

11.5. Datatypes

11.5.1. *teidata.certainty*

teidata.certainty defines the range of attribute values expressing a degree of certainty.	
Module	tei
Used by	teidata.probCertElement : <ul style="list-style-type: none"> purpose/@degree
Content model	<pre> <content> <valList type="closed"> <valItem ident="high"/> <valItem ident="medium"/> <valItem ident="low"/> <valItem ident="unknown"/> </valList> </content> </pre>
Declaration	<pre> teidata.certainty = "high" "medium" "low" "unknown" </pre>
Note	Certainty may be expressed by one of the predefined symbolic values high, medium, or low. The value unknown should be used in cases where the encoder does not wish to assert an opinion about the matter.

11.5.2. *teidata.count*

teidata.count defines the range of attribute values used for a non-negative integer value used as a count.	
Module	tei

Used by	
Content model	<pre><content> <dataRef name="nonNegativeInteger"/> </content></pre>
Declaration	<pre>teidata.count = xsd:nonNegativeInteger</pre>
Note	Any positive integer value or zero is permitted

11.5.3. *teidata.duration.iso*

teidata.duration.iso defines the range of attribute values available for representation of a duration in time using ISO 8601 standard formats	
Module	tei
Used by	
Content model	<pre><content> <dataRef name="token" restriction="[0-9.,DHMPRSTWYZ/;+ -]+"/> </content></pre>
Declaration	<pre>teidata.duration.iso = token { pattern = "[0-9.,DHMPRSTWYZ/;+ -]+" }</pre>
Example	<pre><time dur-iso="PT0,75H">three-quarters of an hour</time></pre>
Example	<pre><date dur-iso="P1,5D">a day and a half</date></pre>
Example	<pre><date dur-iso="P14D">a fortnight</date></pre>
Example	<pre><time dur-iso="PT0.02S">20 ms</time></pre>
Note	<p>A duration is expressed as a sequence of number-letter pairs, preceded by the letter P; the letter gives the unit and may be Y (year), M (month), D (day), H (hour), M (minute), or S (second), in that order. The numbers are all unsigned integers, except for the last, which may have a decimal component (using either . or , as the decimal point; the latter is preferred). If any number is 0, then that number-letter pair may be omitted. If any of the H (hour), M (minute), or S (second) number-letter pairs are present, then the separator T must precede the first 'time' number-letter pair.</p> <p>For complete details, see ISO 8601 <i>Data elements and interchange formats — Information interchange — Representation of dates and times</i>.</p>

11.5.4. *teidata.duration.w3c*

teidata.duration.w3c defines the range of attribute values available for representation of a duration in time using W3C datatypes.	
Module	tei
Used by	
Content model	<pre><content> <dataRef name="duration"/> </content></pre>
Declaration	<pre>teidata.duration.w3c = xsd:duration</pre>
Example	<pre><time dur="PT45M">forty-five minutes</time></pre>
Example	<pre><date dur="P1DT12H">a day and a half</date></pre>
Example	<pre><date dur="P7D">a week</date></pre>
Example	<pre><time dur="PT0.02S">20 ms</time></pre>
Note	<p>A duration is expressed as a sequence of number-letter pairs, preceded by the letter P; the letter gives the unit and may be Y (year), M (month), D (day), H (hour), M (minute), or S (second), in that order. The numbers are all unsigned integers, except for the S number, which may have a decimal component (using . as the decimal point). If any number is 0, then that number-letter pair may be omitted. If any of the H (hour), M (minute), or S (second) number-letter pairs are present, then the separator T must precede the first 'time' number-letter pair.</p>

For complete details, see the W3C specification.

11.5.5. *teidata.enumerated*

teidata.enumerated defines the range of attribute values expressed as a single XML name taken from a list of documented possibilities.

Module	tei
Used by	<p>Element:</p> <ul style="list-style-type: none"> • <u>affiliation</u>/<u>@type</u> • <u>app</u>/<u>@type</u> • <u>availability</u>/<u>@status</u> • <u>birth</u>/<u>@type</u> • <u>channel</u>/<u>@mode</u> • <u>constitution</u>/<u>@type</u> • <u>correspAction</u>/<u>@type</u> • <u>death</u>/<u>@type</u> • <u>derivation</u>/<u>@type</u> • <u>desc</u>/<u>@type</u> • <u>domain</u>/<u>@type</u> • <u>factuality</u>/<u>@type</u> • <u>gap</u>/<u>@reason</u> • <u>gap</u>/<u>@agent</u> • <u>idno</u>/<u>@type</u> • <u>interaction</u>/<u>@type</u> • <u>interaction</u>/<u>@active</u> • <u>interaction</u>/<u>@passive</u> • <u>interp</u>/<u>@type</u> • <u>interpGrp</u>/<u>@type</u> • <u>occupation</u>/<u>@type</u> • <u>org</u>/<u>@role</u> • <u>pc</u>/<u>@force</u> • <u>pc</u>/<u>@unit</u> • <u>person</u>/<u>@role</u> • <u>person</u>/<u>@age</u> • <u>preparedness</u>/<u>@type</u> • <u>purpose</u>/<u>@type</u> • <u>q</u>/<u>@type</u> • <u>sex</u>/<u>@type</u> • <u>span</u>/<u>@type</u> • <u>spanGrp</u>/<u>@type</u> • <u>surface</u>/<u>@attachment</u> • <u>title</u>/<u>@type</u> • <u>title</u>/<u>@level</u> • <u>variantEncoding</u>/<u>@method</u> • <u>variantEncoding</u>/<u>@location</u>
Content model	

	<pre><content> <dataRef key="teidata.word"/> </content></pre>
Declaration	<pre>teidata.enumerated = teidata.word</pre>
Note	<p>Attributes using this datatype must contain a single 'word' which contains only letters, digits, punctuation characters, or symbols: thus it cannot include whitespace.</p> <p>Typically, the list of documented possibilities will be provided (or exemplified) by a value list in the associated attribute specification, expressed with a <valList> element.</p>

11.5.6. teidata.language

teidata.language defines the range of attribute values used to identify a particular combination of human language and writing system. [6.1. Language Identification]	
Module	tei
Used by	<p>Element:</p> <ul style="list-style-type: none"> • language/@ident
Content model	<pre><content> <alternate> <dataRef name="language"/> <valList> <valItem ident=""/> </valList> </alternate> </content></pre>
Declaration	<pre>teidata.language = xsd:language (" ")</pre>
Note	<p>The values for this attribute are language 'tags' as defined in BCP 47. Currently BCP 47 comprises RFC 5646 and RFC 4647; over time, other IETF documents may succeed these as the best current practice.</p> <p>A 'language tag', per BCP 47, is assembled from a sequence of components or <i>subtags</i> separated by the hyphen character (-, U+002D). The tag is made of the following subtags, in the following order. Every subtag except the first is optional. If present, each occurs only once, except the fourth and fifth components (variant and extension), which are repeatable.</p> <p>language</p> <p>The IANA-registered code for the language. This is almost always the same as the ISO 639 2-letter language code if there is one. The list of available registered language subtags can be found at http://www.iana.org/assignments/language-subtag-registry. It is recommended that this code be written in lower case.</p> <p>script</p> <p>The ISO 15924 code for the script. These codes consist of 4 letters, and it is recommended they be written with an initial capital, the other three letters in lower case. The canonical list of codes is maintained by the Unicode Consortium, and is available at http://unicode.org/iso15924/iso15924-codes.html. The IETF recommends this code be omitted unless it is necessary to make a distinction you need.</p> <p>region</p> <p>Either an ISO 3166 country code or a UN M.49 region code that is registered with IANA (not all such codes are registered, e.g. UN codes for economic groupings or codes for countries for which there is already an ISO 3166 2-letter code are not registered). The former consist of 2 letters, and it is recommended they be written in upper case; the list of codes can be searched or browsed at https://www.iso.org/obp/ui/#search/code/. The latter consist of 3 digits; the list of codes can be found at http://unstats.un.org/unsd/methods/m49/m49.htm.</p> <p>variant</p> <p>An IANA-registered variation. These codes are used to indicate additional, well-recognized variations that define a language or its dialects that are not covered by other available subtags.</p> <p>extension</p> <p>An extension has the format of a single letter followed by a hyphen followed by additional subtags. These exist to allow for future extension to BCP 47, but as of this writing no such extensions are in use.</p>

private use	<p>An extension that uses the initial subtag of the single letter <i>x</i> (i.e., starts with <i>x-</i>) has no meaning except as negotiated among the parties involved. These should be used with great care, since they interfere with the interoperability that use of RFC 4646 is intended to promote. In order for a document that makes use of these subtags to be TEI-conformant, a corresponding <code><language></code> element must be present in the TEI header.</p> <p>There are two exceptions to the above format. First, there are language tags in the IANA registry that do not match the above syntax, but are present because they have been 'grandfathered' from previous specifications.</p> <p>Second, an entire language tag can consist of only a private use subtag. These tags start with <i>x-</i>, and do not need to follow any further rules established by the IETF and endorsed by these Guidelines. Like all language tags that make use of private use subtags, the language in question must be documented in a corresponding <code><language></code> element in the TEI header.</p> <p>Examples include</p> <p>sn Shona</p> <p>zh-TW Taiwanese</p> <p>zh-Hant-HK Chinese written in traditional script as used in Hong Kong</p> <p>en-SL English as spoken in Sierra Leone</p> <p>pl Polish</p> <p>es-MX Spanish as spoken in Mexico</p> <p>es-419 Spanish as spoken in Latin America</p> <p>The W3C Internationalization Activity has published a useful introduction to BCP 47, Language tags in HTML and XML.</p>
--------------------	---

11.5.7. *teidata.name*

teidata.name defines the range of attribute values expressed as an XML Name.	
Module	tei
Used by	
Content model	<pre><content> <dataRef name="Name" /> </content></pre>
Declaration	<pre>teidata.name = xsd:Name</pre>
Note	Attributes using this datatype must contain a single word which follows the rules defining a legal XML name (see http://www.w3.org/TR/REC-xml/#dt-name); for example they cannot include whitespace or begin with digits.

11.5.8. *teidata.numeric*

teidata.numeric defines the range of attribute values used for numeric values.	
Module	tei
Used by	
Content model	<pre><content> <alternate> <dataRef name="double" /> <dataRef name="token" restriction="(\-?[0-9]+\-?[0-9]+)" /> <dataRef name="decimal" /> </alternate> </content></pre>
Declaration	

	<pre>teidata.numeric = xsd:double token { pattern = "(\\-?[\\d]+/\\-?[\\d]+)" } xsd:decimal</pre>
Note	<p>Any numeric value, represented as a decimal number, in floating point format, or as a ratio. To represent a floating point number, expressed in scientific notation, 'E notation', a variant of 'exponential notation', may be used. In this format, the value is expressed as two numbers separated by the letter E. The first number, the significand (sometimes called the mantissa) is given in decimal format, while the second is an integer. The value is obtained by multiplying the mantissa by 10 the number of times indicated by the integer. Thus the value represented in decimal notation as 1000.0 might be represented in scientific notation as 10E3.</p> <p>A value expressed as a ratio is represented by two integer values separated by a solidus (/) character. Thus, the value represented in decimal notation as 0.5 might be represented as a ratio by the string 1/2.</p>

11.5.9. teidata.outputMeasurement

teidata.outputMeasurement defines a range of values for use in specifying the size of an object that is intended for display.	
Module	tei
Used by	
Content model	<pre><content> <dataRef name="token" restriction="([\\-+]?\\d+(\\.\\d+)?(% cm mm in pt pc px em ex gd rem vw vh vm)"/> </content></pre>
Declaration	<pre>teidata.outputMeasurement = token { pattern = "[\\-+]?\\d+(\\.\\d+)?(% cm mm in pt pc px em ex gd rem vw vh vm)" }</pre>
Example	<pre><figure> <head>The TEI Logo</head> <figDesc>Stylized yellow angle brackets with the letters <mentioned>TEI</mentioned> in between and <mentioned>text encoding initiative</mentioned> underneath, all on a white background.</figDesc> <graphic height="600px" width="600px" url="http://www.tei-c.org/logos/TEI-600.jpg"/> </figure></pre>
Note	These values map directly onto the values used by XSL-FO and CSS. For definitions of the units see those specifications; at the time of this writing the most complete list is in the CSS3 working draft.

11.5.10. teidata.pattern

teidata.pattern defines attribute values which are expressed as a regular expression.	
Module	tei
Used by	
Content model	<pre><content> <dataRef name="token"/> </content></pre>
Declaration	<pre>teidata.pattern = token</pre>
Note	<p>A regular expression, often called a <i>pattern</i>, is an expression that describes a set of strings. They are usually used to give a concise description of a set, without having to list all elements. For example, the set containing the three strings <i>Handel</i>, <i>Händel</i>, and <i>Haendel</i> can be described by the pattern <code>H(ä ae?)ndel</code> (or alternatively, it is said that the pattern <code>H(ä ae?)ndel</code> <i>matches</i> each of the three strings)</p> <p>Wikipedia This TEI datatype is mapped to the XSD token datatype, and may therefore contain any string of characters. However, it is recommended that the value used conform to the particular flavour of regular expression syntax supported by XSD Schema.</p>

11.5.11. teidata.point

teidata.point defines the data type used to express a point in cartesian space.
--

Module	tei
Used by	
Content model	<pre><content> <dataRef name="token" restriction="(-?[0-9]+(\.[0-9]+)?,-?[0-9]+(\.[0-9]+)?)" /> </content></pre>
Declaration	<pre>teidata.point = token { pattern = "(-?[0-9]+(\.[0-9]+)?,-?[0-9]+(\.[0-9]+)?)" }</pre>
Example	<pre><facsimile> <surface ulx="0" uly="0" lrx="400" lry="280"> <zone points="220,100 300,210 170,250 123,234"> <graphic url="handwriting.png" /> </zone> </surface> </facsimile></pre>
Note	A point is defined by two numeric values, which should be expressed as decimal numbers. Neither number can end in a decimal point. E.g., both 0.0,84.2 and 0,84 are allowed, but 0.,84. is not.

11.5.12. *teidata.pointer*

teidata.pointer defines the range of attribute values used to provide a single URI, absolute or relative, pointing to some other resource, either within the current document or elsewhere.	
Module	tei
Used by	<p>Element:</p> <ul style="list-style-type: none"> • app/@from • app/@to • change/@target • classCode/@scheme • keywords/@scheme • metamark/@target • occupation/@scheme • occupation/@code • span/@from • span/@to
Content model	<pre><content> <dataRef name="anyURI" /> </content></pre>
Declaration	<pre>teidata.pointer = xsd:anyURI</pre>
Note	The range of syntactically valid values is defined by RFC 3986 <i>Uniform Resource Identifier (URI): Generic Syntax</i> . Note that the values themselves are encoded using RFC 3987 <i>Internationalized Resource Identifiers (IRIs) mapping to URIs</i> . For example, https://secure.wikimedia.org/wikipedia/en/wiki/% is encoded as https://secure.wikimedia.org/wikipedia/en/wiki/%25 while http://-mr----nx.mirbg4--n###.#####-#####.####/ is encoded as http://ckbbajlc6dj7bxne2c.xn--wgbh1c/

11.5.13. *teidata.probCert*

teidata.probCert defines a range of attribute values which can be expressed either as a numeric probability or as a coded certainty value.	
Module	tei
Used by	
Content model	<pre><content> <alternate> <dataRef key="teidata.probability" /> </alternate> </content></pre>

	<pre><dataRef key="teidata.certainty" /> </alternate> </content></pre>
Declaration	<pre>teidata.probCert = teidata.probability teidata.certainty</pre>

11.5.14. *teidata.probability*

teidata.probability defines the range of attribute values expressing a probability.	
Module	tei
Used by	teidata.probCert
Content model	<pre><content> <dataRef name="double" /> </content></pre>
Declaration	<pre>teidata.probability = xsd:double</pre>
Note	Probability is expressed as a real number between 0 and 1; 0 representing <i>certainly false</i> and 1 representing <i>certainly true</i> .

11.5.15. *teidata.replacement*

teidata.replacement defines attribute values which contain a replacement template.	
Module	tei
Used by	
Content model	<pre><content> <textNode/> </content></pre>
Declaration	<pre>teidata.replacement = text</pre>

11.5.16. *teidata.sex*

teidata.sex defines the range of attribute values used to identify human or animal sex.	
Module	tei
Used by	Element: <ul style="list-style-type: none"> • person/@sex • sex/@value
Content model	<pre><content> <dataRef key="teidata.word" /> </content></pre>
Declaration	<pre>teidata.sex = teidata.word</pre>
Note	Values for attributes using this datatype may be locally defined by a project, or may refer to an external standard, such as vCard's sex property http://microformats.org/wiki/gender-formats (in which M indicates male, F female, O other, N none or not applicable, U unknown), or the often used ISO 5218:2004 <i>Representation of Human Sexes</i> http://standards.iso.org/it-tf/PubliclyAvailableStandards/c036266_ISO_IEC_5218_2004(E_F).zip (in which 0 indicates unknown; 1 male; 2 female; and 9 not applicable, although the ISO standard is widely considered inadequate); cf. CETH's <i>Recommendations for Inclusive Data Collection of Trans People</i> http://transhealth.ucsf.edu/trans?page=lib-data-collection .

11.5.17. *teidata.temporal.iso*

teidata.temporal.iso defines the range of attribute values expressing a temporal expression such as a date, a time, or a combination of them, that conform to the international standard <i>Data elements and interchange formats – Information interchange – Representation of dates and times</i> .	
Module	tei
Used by	

Content model	<pre> <content> <alternate> <dataRef name="date"/> <dataRef name="gYear"/> <dataRef name="gMonth"/> <dataRef name="gDay"/> <dataRef name="gYearMonth"/> <dataRef name="gMonthDay"/> <dataRef name="time"/> <dataRef name="dateTime"/> <dataRef name="token" restriction="[0-9.,DHMPRSTWYZ/:\-]+" /> </alternate> </content> </pre>
Declaration	<pre> teidata.temporal.iso = xsd:date xsd:gYear xsd:gMonth xsd:gDay xsd:gYearMonth xsd:gMonthDay xsd:time xsd:dateTime token { pattern = "[0-9.,DHMPRSTWYZ/:\-]+" } </pre>
Note	<p>If it is likely that the value used is to be compared with another, then a time zone indicator should always be included, and only the <code>dateTime</code> representation should be used.</p> <p>For all representations for which ISO 8601 describes both a <i>basic</i> and an <i>extended</i> format, these Guidelines recommend use of the extended format.</p> <p>While ISO 8601 permits the use of both 00:00 and 24:00 to represent midnight, these Guidelines strongly recommend against the use of 24:00.</p>

11.5.18. teidata.temporal.w3c

teidata.temporal.w3c defines the range of attribute values expressing a temporal expression such as a date, a time, or a combination of them, that conform to the W3C XML Schema Part 2: Datatypes Second Edition specification.	
Module	tei
Used by	
Content model	<pre> <content> <alternate> <dataRef name="date"/> <dataRef name="gYear"/> <dataRef name="gMonth"/> <dataRef name="gDay"/> <dataRef name="gYearMonth"/> <dataRef name="gMonthDay"/> <dataRef name="time"/> <dataRef name="dateTime"/> </alternate> </content> </pre>
Declaration	<pre> teidata.temporal.w3c = xsd:date xsd:gYear xsd:gMonth xsd:gDay xsd:gYearMonth xsd:gMonthDay xsd:time xsd:dateTime </pre>
Note	<p>If it is likely that the value used is to be compared with another, then a time zone indicator should always be included, and only the <code>dateTime</code> representation should be used.</p>

11.5.19. teidata.text

teidata.text defines the range of attribute values used to express some kind of identifying string as a single sequence of Unicode characters possibly including whitespace.	
Module	tei
Used by	
Content model	<pre> <content> <dataRef name="string"/> </pre>

	<code></content></code>
Declaration	<code>teidata.text = string</code>
Note	Attributes using this datatype must contain a single 'token' in which whitespace and other punctuation characters are permitted.

11.5.20. *teidata.truthValue*

teidata.truthValue defines the range of attribute values used to express a truth value.	
Module	tei
Used by	Element: <ul style="list-style-type: none"> • <code>pc/@pre</code> • <code>surface/@flipping</code>
Content model	<pre><content> <dataRef name="boolean"/> </content></pre>
Declaration	<code>teidata.truthValue = xsd:boolean</code>
Note	The possible values of this datatype are 1 or true, or 0 or false. This datatype applies only for cases where uncertainty is inappropriate; if the attribute concerned may have a value other than true or false, e.g. unknown, or inapplicable, it should have the extended version of this datatype: <code>teidata.xTruthValue</code> .

11.5.21. *teidata.version*

teidata.version defines the range of attribute values which may be used to specify a TEI or Unicode version number.	
Module	tei
Used by	Element: <ul style="list-style-type: none"> • <code>TEI/@version</code>
Content model	<pre><content> <dataRef name="token" restriction="[\d]+(\.[\d]+){0,2}" /> </content></pre>
Declaration	<code>teidata.version = token { pattern = "[\d]+(\.[\d]+){0,2}" }</code>
Note	The value of this attribute follows the pattern specified by the Unicode consortium for its version number (http://unicode.org/versions/). A version number contains digits and fullstop characters only. The first number supplied identifies the major version number. A second and third number, for minor and sub-minor version numbers, may also be supplied.

11.5.22. *teidata.versionNumber*

teidata.versionNumber defines the range of attribute values used for version numbers.	
Module	tei
Used by	
Content model	<pre><content> <dataRef name="token" restriction="[\d]+[a-z]*[\d]*(\.[\d]+[a-z]*[\d]*){0,3}" /> </content></pre>
Declaration	<code>teidata.versionNumber = token { pattern = "[\d]+[a-z]*[\d]*(\.[\d]+[a-z]*[\d]*){0,3}" }</code>

11.5.23. *teidata.word*

teidata.word defines the range of attribute values expressed as a single word or token.	
Module	tei
Used by	<code>teidata.enumerated</code> <code>teidata.sexElement</code> :

	<ul style="list-style-type: none"> • <u>app</u>/<u>@loc</u> • <u>m</u>/<u>@baseForm</u> • <u>metamark</u>/<u>@function</u>
Content model	<pre><content> <dataRef name="token" restriction="^[^p{C}\p{Z}]+"/> </content></pre>
Declaration	<pre>teidata.word = token { pattern = "^[^p{C}\p{Z}]+ " }</pre>
Note	Attributes using this datatype must contain a single ‘word’ which contains only letters, digits, punctuation characters, or symbols: thus it cannot include whitespace.

11.5.24. *teidata.xTruthValue*

teidata.xTruthValue (extended truth value) defines the range of attribute values used to express a truth value which may be unknown.	
Module	tei
Used by	
Content model	<pre><content> <alternate> <dataRef name="boolean"/> <valList> <valItem ident="unknown"/> <valItem ident="inapplicable"/> </valList> </alternate> </content></pre>
Declaration	<pre>teidata.xTruthValue = xsd:boolean ("unknown" "inapplicable")</pre>
Note	In cases where where uncertainty is inappropriate, use the datatype teidata.TruthValue.

11.5.25. *teidata.xpath*

teidata.xpath defines attribute values which contain an XPath expression.	
Module	tei
Used by	
Content model	<pre><content> <textNode/> </content></pre>
Declaration	<pre>teidata.xpath = text</pre>
Note	<p>Any XPath expression using the syntax defined in 6.2..</p> <p>When writing programs that evaluate XPath expressions, programmers should be mindful of the possibility of malicious code injection attacks. For further information about XPath injection attacks, see the article at OWASP.</p>
