

Karl Kraus Rechtsakten
Kodierrichtlinien

Ingo Börner
Vanessa Hannesschläger
Juni 2020

1. Intro

In diesem Dokument werden die Kodierrichtlinien für TEI xml Dokumente beschrieben, die im Projekt *Intertextuality in the Legal Papers of Karl Kraus. A Scholarly Digital Edition* (FWF Projektnr. P 31138-G30, PI DDr.in Katharina Prager) zur Anwendung kommen.

Dieses Projekt wird vom Ludwig Boltzmann Institut für Digital History (<https://geschichte.lbg.ac.at>) in Zusammenarbeit mit dem Austrian Centre for Digital Humanities and Cultural Heritage (ACDH-CH) der Österreichischen Akademie der Wissenschaften (<https://acdh.oeaw.ac.at>) und der Wienbibliothek im Rathaus (<https://www.wienbibliothek.at>) umgesetzt. Ziel des Projekts ist es, eine digitale Edition der Kanzleiakten aus der Kanzlei Oskar Samek zu erstellen, die die Fälle dokumentieren, in die Karl Kraus involviert war. Diese digitale Edition soll es ihren Nutzer*innen ermöglichen, den unterschiedlichen intertextuellen Bezügen in diesen Akten nachzuforschen.

Als Grundlage dient dabei einerseits das Vorgängerprojekt *Karl Kraus Online* (<https://www.kraus.wienbibliothek.at>), andererseits die digitalisierte Fassung der Kanzleiakten in der digitalen Wienbibliothek (<https://www.digital.wienbibliothek.at>). Diese beiden Quellen bauen auf der von Katharina Prager erstellten Ordnung der Bestandsliste des Kraus-Archivs der Wienbibliothek im Rathaus auf und orientieren sich an den Signaturen dieser Liste. Diese Ordnungslogik wird auch im vorliegenden Projekt als Ausgangsbasis übernommen. Ebenfalls eine wichtige Grundlage für die Editionsarbeit stellt die von Hermann Böhm erstellte, heute vergriffene Lese-Edition der Akten in vier Bänden dar (*Karl Kraus contra ...: die Prozeßakten der Kanzlei Oskar Samek in der Wiener Stadt- und Landesbibliothek, bearb. und kommentiert von Hermann Böhm, Wien, Wiener Stadt- u. Landesbibliothek, Bd. 1–4, 1995–1997*).

Im Rahmen des vorliegenden Projekts wird auf Basis der genannten Quellen für jedes erhaltene Einzeldokument im Archiv ein korrespondierendes TEI xml Dokument erstellt, in dem sich eine annotierte Transkription des Volltexts sowie alle relevanten Metadaten und Verweise auf Digitalisate des Archivdokuments befinden. (Darüberhinaus wird pro Fall ein weiteres TEI xml Dokument angelegt, in dem die entsprechenden Metadaten festgehalten und eine Liste der zum Fall gehörigen Einzeldokumente angelegt wird.) Wie genau diese TEI xml Dokumente entstehen und strukturiert sind, ist im Folgenden beschrieben.

2. Workflow

Der Workflow zur Erstellung eines Dokuments umfasst folgende Schritte:

- Auswahl des zu transkribierenden Dokuments
- Transkribus - Upload, Erstellen der Transkription
- Bildzuordnung
- Erstellen des TEI Dokuments
- Bearbeiten des TEI Dokuments

3. Metadaten - des TEI Dokuments

Das Element `<fileDesc>` enthält die Metadaten zum elektronischen Dokument.

3.1. Titel, VerfasserIn, HerausgeberIn und weitere Beteiligte

`<titleStmnt>` enthält Informationen zu Titel `<title>` und Verfasser `<author>`, sowie den Namen der/des verantwortlichen Herausgeber/in `<editor>`. Innerhalb von `<respStmnt>` werden weitere Angaben zu an der Erstellung des Dokuments beteiligten Personen hinterlegt, bspw. dazu, wer das Dokument transkribiert und kodiert hat.

Ein Beispiel für ein `<titleStmnt>`:

```
<titleStmnt>
  <title>Brief Samek an Reichspost (verantw. Red. Karl Schiffleitner)</title>
  <author ref="https://pmb.acdh.oeaw.ac.at/entity/38909">Oskar Samek</author>
  <editor ref="#IL">Isabell Langkabel</editor>
  <respStmnt>
    <resp ref="http://id.loc.gov/vocabulary/relators/trc">Transkription</resp>
    <name ref="#IL">Isabell Langkabel</name>
  </respStmnt>
  <respStmnt>
    <resp ref="http://id.loc.gov/vocabulary/relators/mrk">TEI-Encoding</resp>
    <name ref="#IB">Ingo Börner</name>
    <name ref="#VH">Vanessa Hanneschläger</name>
  </respStmnt>
</titleStmnt>
```

Das Dokument wurde von 'Oskar Samek' verfasst und wird von 'Isabell Langkabel' hauptverantwortlich herausgegeben. Das von ihr transkribierte Dokument wurde von 'Ingo Börner' und 'Vanessa Hanneschläger' entsprechend den Kodierrichtlinien kodiert.

Das *ref* dient zur Verknüpfung mit einem zentral verwalteten Datensatz. Bspw. wird der Verfasser des Briefes, 'Oskar Samek' mittels *ref* mit dem entsprechenden Datensatz (<https://pmb.acdh.oeaw.ac.at/entity/38909>) in der PMB verlinkt.

Die Beiträge weiterer Personen (Transkription, Kodierung usw.) werden in `<respStmt>` erfasst. Die Tätigkeit `<resp>` wird über ein Attribut *ref* mit einem MARC Relator-Code versehen.

3.2. Herausgeber (Institutionen)

Im Element `<publisher>` im `<publicationStmt>` findet sich die Information zum Herausgeber des Dokuments. Im folgenden Beispiel sind es drei Institutionen. Das Element `<availability>` enthält im Element `<licence>` einen Verweis `<ref>` auf die Creative Commons-Lizenz, unter der die Daten bereitgestellt werden. Die `<idno>` Elemente geben interne und externe Identifier an.

```
<publicationStmt>
  <publisher>
    <!-- das soll anders werden: Namen ausschreiben und Adressen ergänzen -->
    <name>ACDH-CH</name>
    <name>LBI-DH</name>
    <name>Wienbibliothek im Rathaus</name>
  </publisher>
  <availability>
    <licence target="http://creativecommons.org/licenses/by/4.0">Creative Commons
      Namensnennung 4.0 International Lizenz</licence>
  </availability>
  <idno type="URL" subtype="legalkraus">https://legalkraus.acdh.oeaw.ac.at/id/D_000002-002-000</idno>
  <idno type="URL" subtype="krausonline">http://www.kraus.wienbibliothek.at/node/1540</idno>
  <idno type="ID" subtype="transkribus">365566</idno>
</publicationStmt>
```

3.3. Status des Dokuments, Arbeitsstand

Der Status der Bearbeitung des Dokuments wird in der `<revisionDesc>` im Attribut *status* notiert. Folgende Werte stehen hierfür zur Verfügung:

- draft
- done
- checked

Wird ein Dokument neu angelegt, ist es im Status 'draft'. Sind die Arbeitsschritte (siehe XX) abgeschlossen, wird der Status 'done' vergeben. Korrektur gelesene Dokumente erhalten den Statuswert 'checked'.

4. Metadaten - des historischen Dokuments

Ebenfalls im `<teiHeader>` werden Metadaten zum historischen Dokument hinterlegt.

4.1. Quelle

Informationen zur Quelle finden sich im Element `<sourceDesc>`.

4.2. Textzeugen

Das Element `<listWit>` listet vorliegende Textzeugen auf.

4.3. Selektiver Apparat

...

4.4. Kontextinformationen

Im Element `<profileDesc>` lassen sich Kontextinformationen zum Dokument, etwa den beteiligten Personen, dem Entstehungsdatum, usw. hinterlegen.

4.4.1. Datierung

Zur Datierung (und als Grundlage für eine Sortierung) wird innerhalb von `<creation>` ein Datum im ISO-Format (JJJJ-MM-TT) im Attribut *when-iso* angegeben.

```
<creation>
  <date type="sortDate"
    when-iso="1922-11-30">30.11.1922</date>
</creation>
```

[Welches Datum wird hier notiert? Jenes, das am Dokument in einer Datumszeile angegeben ist?] Beispiele und Entscheidungshilfen...

4.4.2. Klassifizierung des Dokuments

`<textClass>`

[Verweis auf die Taxonomie auf <https://vocabs.acdh-dev.oeaw.ac.at/>].

Zur Klassifikation von Dokumenten steht eine Taxonomie bereit. Dazu wird die *URI* im Attribut *target* von `<catRef>` angegeben.

```
<textClass>
  <catRef target="https://vocabs.acdh.oeaw.ac.at/legalkraus-doctypes/v1.0/D.K.BRF"/>
</textClass>
```

Im obigen Beispiel klassifiziert <https://vocabs.acdh.oeaw.ac.at/legalkraus-doctypes/v1.0/D.K.BRF> das kodierte Dokument als Brief.

4.4.3. Beteiligte Personen und Institutionen

In der `<particDesc>` werden beteiligte Personen und Institutionen (im Unterschied zu rein namentlich genannten) in ihrer Rolle *role* verzeichnet.

(Für den Fall ergeben sich die Rollen aus den einzelnen Dokumenten.)

```
<particDesc>
  <person role="https://vocabs.acdh.oeaw.ac.at/legalkraus-roles/v1.0/plaintiff">
    <name>Karl Kraus</name>
  </person>
  <person role="https://vocabs.acdh.oeaw.ac.at/legalkraus-roles/v1.0/defendant">
    <name>Karl Schiffleitner</name>
  </person>
  <org role="https://vocabs.acdh.oeaw.ac.at/legalkraus-roles/v1.0/defendant">
    <name>Reichspost</name>
  </org>
</particDesc>
```

Achtung: Die Werte in *role* sind noch vorläufig. Idealerweise werden diese aus einer noch zu erstellenden Taxonomie entnommen.

Denkbar (und sinnvoll) wäre es auch Personen und Institutionen mittels *ref* mit einem Normdatensatz (oder der PMB) zu verknüpfen.

4.4.4. Brief-Metadaten

`<correspDesc>`

gibt es nur bei Korrespondenzstücken

```
<correspDesc>
  <correspAction type="sent">
    <rs type="person"
      ref="https://pmb.acdh.oeaw.ac.at/entity/38909">Oskar Samek</rs>
    <rs type="place"
      ref="https://pmb.acdh.oeaw.ac.at/entity/50">Wien</rs>
  <!-- hier nach (Post-)Stempel? -->
  <date when-iso="1922-11-30">30.11.1922</date>
  </correspAction>
  <correspAction type="received">
    <rs type="institution"
      ref="https://pmb.acdh.oeaw.ac.at/entity/29637">Reichspost</rs>
    <rs type="person"
      ref="https://pmb.acdh.oeaw.ac.at/entity/40703">Karl
      Schiffleitner
    <!-- zitat aus dem Text oder auflösen? -->
    </rs>
    <rs type="place"
      ref="https://pmb.acdh.oeaw.ac.at/entity/50">Wien</rs>
  </correspAction>
</correspDesc>
```

4.4.5. Schreiberhände

`<handNotes>`

Das Schreibmedium immer an eine Schreiberhand geknüpft. `<handNote>` mit *medium* (Bleistift,...) Kriterium für die Ansetzung einer Schreiberhand als `<handNote>` ist jedenfalls ein anderes Schreibmedium. Schreiberhände können, sofern sie Text beisteuern, identifiziert und per *scribeRef* mit dem Schreiber verknüpft werden (optional). Bei Anstreichungen ist dies in der Regel nicht möglich, dennoch sind bei materiell unterschiedlichen Anstreichungen auch die entsprechenden Hände anzulegen.

```
<handNotes>
  <handNote xml:id="D_000002-002-000-hand01"
    medium="pencil"/>
</handNotes>
```

5. Bilddaten

`<facsimile>`, `<surfaceGrp>`, `<surface>` und so weiter. Zuordnung von Bildern zu Blatt und Seite; ...

6. Transkription des Dokuments

Die Transkription erfolgt im Element `<body>` des Elements `<text>`.

6.1. Editorische Einrichtungsfragen

Folgende Prinzipien wurden bei der Erstellung der Transkriptionen mit Transkribus berücksichtigt:

Spalten zwischen Abkürzungen, 'Z.A.' oder 'Z. A.', 'St.P.O.', 'P.A.', 'Urh.Ges.' etc., 'Art. IX' oder 'Art.IX', bei Datumsangaben, Komposita wie 'Kronos-Verlag' ('Kronos - Verlag') werden grundsätzlich nicht gesetzt.

Paginierungen im Typoskript werden nicht transkribiert.

Der Umgang mit Aktenzeichen, tabeller. Darstellung, muss mit einem Editionsbeispiel geklärt und auch mit dem Staatsarchiv geklärt werden, 35.13. 4. Seite - Check Formatierung Tabelle / Zeilen

Vorgefertigte Briefköpfe (Adressen etc.) werden erst einmal nicht zeilengetreu transkribiert bzw. nicht wiedergegeben; Durchsuchbarkeit durch Angabe im TEI-Header möglich

Interpunktion erfolgt zunächst streng nach Typoskript (selbst wenn dort eine Struktur erkennbar ist, die nicht konsequent eingehalten wird [etwa bei Aufzählungen etc.]) und wird nicht korrigiert, Bsp: 27.5, S. 4: Dr. Josef Szekely Wien, IX. Canisiusgasse 8 (Stunde)

Falsche Apostrophierung wird ebenfalls nicht korrigiert: Bsp. Ely's in Elys -> Tippfehler werden allerdings korrigiert, ebenso Anführungszeichen nach typographischen Regeln übernommen (öffnende und schließende sowie normale und einfache entsprechend angleichen), hingegen wird Grammatik/Rechtschreibung übernommen, aber Durchsuchbarkeit sollte stets gewährleistet bleiben

Bei Hochstellung von Zahlen und Buchstaben wird verzichtet: bspw. Hochstellung bei Dr wird immer mit Dr. wiedergegeben, bei Uhrzeiten ebenfalls auf Hochstellung verzichten

Abkürzungen in hs. Protokollen werden aufgelöst: bspw. Zge -> Zeuge

Problem bei Korrektur der Rechtschreibung: nach zeitgenössischen Rechtschreibregeln -> wahrscheinlich brauchen wir einfach klare Regeln, wann man in Rechtschreibung u. Interpunktion eingreift, ansonsten greift man in Sprachgebrauch zu sehr ein oder man erstellt künstliche Texte, die es gar nicht gibt: Angenommenes Beispiel: Kraus beruft sich in einem Anschreiben auf fehlerhafte Schreibweise und gründet seine Thesen darauf, an der Stelle dürfte man natürlich nicht die fehlerhafte Schreibweise korrigieren, das Problem ist dann aber, dass wir dies konsequent tun, damit die Lesbarkeit bzw. Recherche nicht beeinträchtigt ist -> inkonsequente Vorgehensweise durch vernünftige Regeln möglichst vermeiden: sollte man bspw. den Rechtschreibfehler „dass“ nicht korrigieren, da an der Stelle eigentlich ein Relativsatz gemeint ist und kein konsekutiver oder „einer strengerer Behandlung unterliegen würde“ nicht in „einer strengeren Behandlung unterliegen würde“? Hier handelt es sich ja nicht um Tippfehler

Unterführungszeichen " werden aufgelöst, da wir Texte nicht standgenau wiedergeben

Bei Darstellung „Beschwerde S 4.-“ werden Punkte ebenfalls weggelassen

Datumsangaben bei Durchschlägen wie bspw. 11. November 7 sollten nicht unvollständig, also mimetisch, wiedergegeben, sondern vollständig, 11. November 1927 (nach dem wahrscheinlich nicht mehr vorhandenen Original), angegeben werden; in Edition als Hinzufügung wiedergeben?

Wie werden Dokumente mit Tabellen dargestellt? Bsp: 31.15: nicht tabellarisch, siehe 134.71: wieviele tabell. Dok. gibt es? Wiedergabe überlegen

Bei Verwendung von J anstelle des I wird der Buchstabe entsprechend angeglichen, Bsp.: Jch in Ich, ein entsprechender Hinweis und erläuternder Kommentar sollte aber im Header erfolgen. Interessanterweise tritt diese Schreibweise v.a. bei Botho Laserstein auf, der offenbar für Schriftfragen sensibilisiert zu sein schien. So benutzte Laserstein u.a. eine Schreibmaschine, die keine Monospace, sondern Schwabacher Schrift verwendete, zudem setzte er in seinen Briefen Kustoden, die eigentlich primär für den Buchdruck vorgesehen waren. Diese wenigen Merkmale weisen darauf hin, dass Laserstein auf die Lesbarkeit seiner Briefe achtete. Unter Umständen ist so auch die eigentümliche J-Schreibung zu erklären: In der Monospace ähnelt das Versal-I dem Minuskel-L; durch die J-Schreibung, die in Handschriften noch durchaus üblich war, da in der Kurrentschrift das versale J und versale I kaum zu unterscheiden waren sowie bis in das 17./18. Jahrhundert die Buchstaben äquivalent verwendet wurden, konnte deutlich zwischen Versal-I und dem kleinen I differenziert werden.

Sehr geehrter Herr Kollege ! wird zu Sehr geehrter Herr Kollege! Abstand wird nicht übernommen.

Deckblätter bei Anträgen, Urteilen etc. werden stets ediert

falsche Schreibweise von Eigennamen bleibt erhalten, wenn es sich um keine Tippfehler handelt bzw. nur bei eindeutigen Tippfehlern wie Buchstabendrehern wird in den Text eingegriffen

Stempel werden in Transkribus mit eigener Textregion (tag mit element stamp) erfasst: d.h. sie werden nicht transkribiert bzw. wichtige Informationen wie Eingangsdatum im Header erfasst; Stempel werden aber ausgeschnitten, so dass jede Stempelart der Akten einsehbar ist. Arbeit könnte von den nächsten Praktikantinnen übernommen werden?

auch Beschreibungen wie Blatt 2 werden. nicht gesetzt, weil Paginierungen nicht ediert werden

Umgang mit zweispaltigen Satz? Bsp.: 70.3, besonders schwierig: 70.5 mit: news-eye können mehrere Spalten mit Text aufgezogen werden

Kustoden werden im Header kommentiert bzw. erläutert, nicht aber in der Transkription aufgenommen

Umgang mit zwei Fassungen einer Seite in einem Schriftsatz, Bsp.: 68.62, Seite 8 und Seite 9 (einmal mit handschriftlichen Korrekturen, einmal ohne) – funktioniert das hier mit Editionsrichtlinien Punkt 5 (Varianten aus Vorstufen mitgeteilt): an der betreffenden Stelle ist die Grundlage die späte Fassung; aufgenommen wird aber auch die frühe Fassung mit den Änderungen, die als Streichungen und Hinzufügungen dargestellt werden; schließlich wird es so für die betreffenden Zeilen zwei mögliche Versionen geben: den Entwurf als frühe Fassung und die

Umsetzung des Entwurfs als späte Fassung; diese Lösung scheint besser als etwa die Darstellung der frühen Fassung in einem Variantenapparat, da so die Änderungen besser nachvollziehbar sind.

6.2. Textstruktur

Trennstriche usw. werden nicht kodiert, stattdessen, wenn möglich, Struktureinheiten ansetzen

6.2.1. Abschnitte

`<div>`

6.2.2. Absätze

`<p>`

6.2.3. Seitenwechsel

`<pb>`

Verknüpfung mit Bilddaten beschreiben

6.2.4. Zeilenfall

`<lb>`

6.2.5. Marginalien

Marginalien werden generell als `<note>` erfasst, ev. mit *place* o.ä. positioniert; sinnvoll wäre eine Klassifizierung mittels *type* von Marginalien, die auf eine Beilage verweisen; auf diese Weise lassen sich zumindest die Stellen im Dokument finden, in denen sich dann im Fließtext ein Verweis auf die Beilage findet

6.3. Typografische Hervorhebungen

`<hi>`

Unterstreichungen Sperrung Unterstreichungen + Sperrung [Böhm: Kursive und Fette] Tag `<hi>` mit Attributen (vermutlich *rend* mit Werteliste) »Hervorhebung« vs. »Markierung« Medium immer an Hand (Attribut *hand*) geknüpft (im Header) `<handNote>` mit *medium* (Bleistift,...) Kriterium für die Ansetzung einer Schreiberhand im Header ist jedenfalls ein anderes Schreibmedium Schreiberhände bei Text identifizieren, nicht notwendigerweise bei Anstreichungen bei materiell unterschiedlichen Anstreichungen im Header auch zwei Hände anlegen Argument: Unterstreichungen immer semantisch relevant, daher werden sie im Gegensatz zu Sofortkorrekturen immer ausgezeichnet

6.4. Eingriffe in den Text

Sofort- und Spätkorrekturen

kodiert werden ausschließlich »semantisch relevante« Änderungen (siehe Einrichtung?): Beispiele finden sehr sparsam einsetzen... ex negativo definieren: keine orthographischen Änderungen, keine auf Interpunktion bezogene Änderungen, nicht, wenn Buchstaben nachgezogen werden (Lesbarkeit) bei semantisch relevanten Änderungen in unterschiedlichen Schreibeinheiten: Hinzufügung `<add>`, `` ... `<subst>` `<gap>` Textverlust `<supplied>` Zeilenfall in Hinzufügungen `<add>` werden nicht kodiert (kein `<lb>` in `<add>`) Frage ist, wie das Randanmerkungen betrifft (soll man in der Marginalie `<add>` verwenden oder `@hand` auf die `<note>` setzen = bevorzugte Variante) # `<lb>` Spätkorrekturen nur dann erfasst, wenn inhaltlich relevant sind. Bsp. für inhaltlich nicht relevante Spätkorrektur aus 2.3 (Anklageschrift): "solliim"

7. Annotation und semantische Erschließung

7.1. Klassifizierung der Abschnitte

Beipielsweise im Urteil *type*.

7.2. Verweise auf Entitäten

`<rs>` mit *type*.

Schachtelungen von `<rs>` sollen gemacht werden, Beispiel:

```
<rs type="person">Regisseur des <rs type="institution">Volkstheaters</rs>
</rs>
```

eher großzügiger taggen, als zu wenig

Personal- und Possessivpronomen nicht taggen; Kriterium sind Namen bzw. Substantive, die Rollen bezeichnen

7.2.1. Personen

erwähnte Personen im Unterschied zu 'beteiligten' Personen, vgl. X

historische Personen werden ausgezeichnet

type person

Aufnahme von am Dokument beteiligten Personen in der `<particDesc>` mit *role* im `<teiHeader>` des Dokuments (für den Fall ergeben sich die Rollen aus den einzelnen Dokumenten).

keine literarischen Figuren auszeichnen; gegebenenfalls als Werke (Bsp. “Hamlet”, nicht Ophelia, Claudius, ...), aber Nero als historische Person soll getaggt werden; historische Personen in Zitaten werden getaggt

7.2.2. Institutionen

type institution

7.2.3. Orte

type place

7.2.4. Werke

type works

7.3. Gesetzestexte

`<rs>` *type* law

7.4. Zitate

`<q>` und `<quote>`

generell `<q>` für Text unter Anführungszeichen; `<quote>` für alles, was als Zitat identifiziert wurde; die Ausgabe kann man überlegen (Bsp. Doppelte und einfache Anführungszeichen). Anführungszeichen wurden bei der Transkription ohnehin schon normalisiert.

8. IDs

IDs, Identifier werden wie folgt vergeben...

9. TEI Modifikation

9.1. Elements

9.1.1. `<TEI>`

<code><TEI></code> (TEI document) contains a single TEI-conformant document, combining a single TEI header with one or more members of the <code>model.resourceLike</code> class. Multiple <code><TEI></code> elements may be combined to form a <code><teiCorpus></code> element. [4. Default Text Structure 15.1. Varieties of Composite Text]	
Module	textstructure
Attributes	Attributes xml:id (identifier) ID des Dokuments Derived from <code>att.global</code> Status Required Datatype ID
Contained by	—
May contain	header: <code>teiHeader</code> textstructure: <code>text</code> transcr: <code>facsimile</code>
Note	This element is required. It is customary to specify the TEI namespace <code>http://www.tei-c.org/ns/1.0</code> on it, using the <i>xmlns</i> attribute.
Example	<pre> <TEI xml:id="D_000002-002-000" xmlns="http://www.tei-c.org/ns/1.0"> <teiHeader> <fileDesc> <titleStmt> <title/> </titleStmt> <publicationStmt> <publisher>ACDH-CH</publisher> </publicationStmt> <sourceDesc> <p> <!-- Info zur Quelle --> </p> </sourceDesc> </fileDesc> <!-- weitere Metadaten --> </pre>

	<pre> </teiHeader> <facsimile> <!-- Bilddaten --> </facsimile> <text> <body> <!-- Transkription --> </body> </text> </TEI> </pre>
Schematron	<s:ns prefix="tei" uri="http://www.tei-c.org/ns/1.0"/> <s:ns prefix="xs" uri="http://www.w3.org/2001/XMLSchema"/>
Schematron	<s:ns prefix="rng" uri="http://relaxng.org/ns/structure/1.0"/>
Content model	<pre> <content> <sequence minOccurs="1" maxOccurs="1"> <elementRef key="teiHeader"/> <classRef key="model.resourceLike" minOccurs="1" maxOccurs="unbounded"/> </sequence> </content> </pre>
Schema Declaration	<pre> element TEI { attribute xml:id { text }, (teiHeader, model.resourceLike+) } </pre>

9.1.2. <add>

<p><add> (addition) contains letters, words, or phrases inserted in the source text by an author, scribe, or a previous annotator or corrector. [3.4.3. Additions, Deletions, and Omissions]</p>	
Module	core
Attributes	<p>Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.transcriptional (@status, @cause, @seq) (att.editLike (@evidence, @instant) (att.dimensions (@unit, @quantity, @extent, @precision, @scope) (att.ranging (@atLeast, @atMost, @min, @max, @confidence)))) (att.written (@hand)) att.placement (@place) att.typed (@type, @subtype)</p>
Member of	model.pPart.transcriptional
Contained by	<p>core: add author date del editor hi name note p publisher q quote ref rs title</p> <p>figures: cell</p> <p>header: change handNote licence</p> <p>textstructure: dateline opener</p> <p>transcr: subst supplied</p>
May contain	<p>core: add date del gap graphic hi lb name note pb q quote ref rs title</p> <p>figures: table</p> <p>header: idno</p> <p>textcrit: listWit</p> <p>transcr: subst supplied</p> <p>character data</p>
Note	<p>In a diplomatic edition attempting to represent an original source, the <add> element should not be used for additions to the current TEI electronic edition made by editors or encoders. In these cases, either the <corr> or <supplied> element are recommended.</p> <p>In a TEI edition of a historical text with previous editorial emendations in which such additions or reconstructions are considered part of the source text, the use of <add> may be appropriate, dependent on the editorial philosophy of the project.</p>
Example	<pre> The story I am going to relate is true as to its main facts, and as to the consequences <add place="above">of these facts</add> from which this tale takes its title. </pre>
Content model	<pre> <content> <macroRef key="macro.paraContent"/> </content> </pre>
Schema Declaration	<pre> element add { </pre>

	<pre> att.global.attributes, att.transcriptional.attributes, att.placement.attributes, att.typed.attributes, macro.paraContent } </pre>
--	---

9.1.3. <author>

<author> in a bibliographic reference, contains the name(s) of an author, personal or corporate, of a work; for example in the same form as that provided by a recognized bibliographic name authority. [3.11.2.2. Titles, Authors, and Editors 2.2.1. The Title Statement]

Module	core
Attributes	<p>Attributes</p> <p>ref (reference) Verweis auf Normdatensatz (Bsp. in der PMB)</p> <p>Derived from <u>att.canonical</u></p> <p>Status Required</p> <p>Datatype 1–# occurrences of <u>teidata.pointer</u> separated by whitespace</p>
Member of	<u>model.respLike</u>
Contained by	header: <u>titleStmt</u>
May contain	<p>core: <u>add</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>pb</u> <u>ref</u> <u>rs</u> <u>title</u></p> <p>header: <u>idno</u></p> <p>transcr: <u>subst</u> <u>supplied</u></p> <p>character data</p>
Note	<p>Particularly where cataloguing is likely to be based on the content of the header, it is advisable to use a generally recognized name authority file to supply the content for this element. The attributes <i>key</i> or <i>ref</i> may also be used to reference canonical information about the author(s) intended from any appropriate authority, such as a library catalogue or online resource.</p> <p>In the case of a broadcast, use this element for the name of the company or network responsible for making the broadcast.</p> <p>Where an author is unknown or unspecified, this element may contain text such as <i>Unknown</i> or <i>Anonymous</i>. When the appropriate TEI modules are in use, it may also contain detailed tagging of the names used for people, organizations or places, in particular where multiple names are given.</p>
Example	<pre> <titleStmt> <title>Brief Samek an Reichspost (verantw. Red. Karl Schiffleitner)</title> <author ref="https://pmb.acdh.oeaw.ac.at/entity/38909">Oskar Samek</author> <!-- ... --> </titleStmt> </pre>
Content model	<pre> <content> <macroRef key="macro.phraseSeq"/> </content> </pre>
Schema Declaration	<pre> element author { attribute ref { list { + } }, macro.phraseSeq } </pre>

9.1.4. <availability>

<availability> supplies information about the availability of a text, for example any restrictions on its use or distribution, its copyright status, any licence applying to it, etc. [2.2.4. Publication, Distribution, Licensing, etc.]

Module	header
Member of	<u>model.publicationStmtPart.detail</u>
Contained by	header: <u>publicationStmt</u>
May contain	<p>core: <u>p</u></p> <p>header: <u>licence</u></p>
Note	A consistent format should be adopted
Example	<pre> <availability> <licence target="http://creativecommons.org/licenses/by/4.0">Creative Commons </pre>

	Namensnennung 4.0 International Lizenz</licence> </availability>
Content model	<pre> <content> <alternate minOccurs="1" maxOccurs="unbounded"> <classRef key="model.availabilityPart"/> <classRef key="model.pLike"/> </alternate> </content> </pre>
Schema Declaration	<pre> element availability { (model.availabilityPart model.pLike)+ } </pre>

9.1.5. <body>

<body> (text body) contains the whole body of a single unitary text, excluding any front or back matter. [4. Default Text Structure]	
Module	textstructure
Contained by	textstructure: <u>text</u>
May contain	core: <u>gap lb note p pb q quote</u> figures: <u>table</u> textcrit: <u>listWit</u> textstructure: <u>dateline div opener</u>
Example	<pre> <body> <l>Nu scylun hergan hefaenricaes uard</l> <l>metudæs maecti end his modgidanc</l> <l>uerc uuldurfadur sue he uundra gihuaes</l> <l>eci dryctin or astelidæ</l> <l>he aerist scop aelda barnum</l> <l>heben til hrofe haleg scepen.</l> <l>tha middungeard moncynnæs uard</l> <l>eci dryctin æfter tiadæ</l> <l>firum foldu frea allmectig</l> <trailer>primo cantauit Cædmon istud carmen.</trailer> </body> </pre>

Schema Declaration	<pre> element body { model.global*, (model.divTop, (model.global model.divTop)*)?, (model.divGenLike, (model.global model.divGenLike)*)?, ((model.divLike, (model.global model.divGenLike)*)+ (model.divlLike, (model.global model.divGenLike)*)+ ((model.common, model.global*)+, ((model.divLike, (model.global model.divGenLike)*)+ (model.divlLike, (model.global model.divGenLike)*)+)?)), (model.divBottom, model.global*)* } </pre>

9.1.6. <catRef>

<catRef> (category reference) specifies one or more defined categories within some taxonomy or text typology. [2.4.3. The Text Classification]	
Module	header
Attributes	<p>Attributes</p> <p>target specifies the destination of the reference by supplying one or more URI References</p> <p>Derived from att.pointing</p> <p>Status Required</p> <p>Datatype 1-# occurrences of teidata.pointer separated by whitespace</p> <p>Note Werte müssen aus legalkraus-doctypes kommen!</p>
Contained by	header: textClass
May contain	Empty element
Note	The <i>scheme</i> attribute needs to be supplied only if more than one taxonomy has been declared.
Example	<code><catRef target="https://vocabs.acdh.oeaw.ac.at/legalkraus-doctypes/v1.0/D.K.BRF"/></code>
Example	<code><catRef target="https://vocabs.acdh.oeaw.ac.at/legalkraus-doctypes/v1.0/D.J.AKS"/></code>

Content model	<code><content/></code>
Schema Declaration	<code>element catRef { attribute target { list { + } }, empty }</code>

9.1.7. <cell>

<cell> contains one cell of a table. [14.1.1. TEI Tables]	
Module	figures
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.tableDecoration</u> (@role, @rows, @cols)
Contained by	figures: <u>row</u>
May contain	core: <u>add</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>p</u> <u>pb</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>title</u> figures: <u>table</u> header: <u>idno</u> textcrit: <u>listWit</u> transcr: <u>subst</u> <u>supplied</u> character data
Example	<pre> <row> <cell role="label">General conduct</cell> <cell role="data">Not satisfactory, on account of his great unpunctuality and inattention to duties</cell> </row> </pre>
Content model	<pre> <content> <macroRef key="macro.specialPara"/> </content> </pre>
Schema Declaration	<pre> element cell { att.global.attributes, att.tableDecoration.attributes, macro.specialPara } </pre>

9.1.8. <change>

<change> documents a change or set of changes made during the production of a source document, or during the revision of an electronic file. [2.6. The Revision Description 2.4.1. Creation 11.7. Identifying Changes and Revisions]	
Module	header
Attributes	<p>Attributes</p> <p>who indicates the person, or group of people, to whom the element content is ascribed.</p> <p>Derived from <u>att.ascribed</u></p> <p>Status Required</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by whitespace</p> <p>type Typ des Arbeitsschritts</p> <p>Derived from <u>att.typed</u></p> <p>Status Required</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Legal values tba</p> <p>are: wird noch ermittelt</p>
Contained by	header: <u>revisionDesc</u>

May contain	core: add date del gap graphic hi lb name note p pb q quote ref rs title figures: table header: idno textcrit: listWit transcr: subst supplied character data
Note	The <i>who</i> attribute may be used to point to any other element, but will typically specify a <respStmt> or <person> element elsewhere in the header, identifying the person responsible for the change and their role in making it. It is recommended that changes be recorded with the most recent first. The <i>status</i> attribute may be used to indicate the status of a document following the change documented.
Example	<pre><change when-iso="2020-04-23T07:44:20.525Z" who="#IB">Replaced Text with Transcription of Transkribus Document 365566.</change></pre>
Content model	<pre><content> <macroRef key="macro.specialPara"/> </content></pre>
Schema Declaration	<pre>element change { attribute who { list { + } }, attribute type { "tba" }, macro.specialPara }</pre>

9.1.9. [<correspAction>](#)

<correspAction> (correspondence action) contains a structured description of the place, the name of a person/organization and the date related to the sending/receiving of a message or any other action related to the correspondence. [2.4.6. Correspondence Description]	
Module	header
Attributes	<p>Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.sortable (@sortKey) att.typed (type, @subtype)</p> <p>type describes the nature of the action.</p> <p>Derived from att.typed</p> <p>Status Optional</p> <p>Datatype teidata.enumerated</p> <p>Suggested values include:</p> <p>sent information concerning the sending or dispatch of a message.</p> <p>received information concerning the receipt of a message.</p> <p>transmitted information concerning the transmission of a message, i.e. between the dispatch and the next receipt, redirect or forwarding.</p> <p>redirected information concerning the redirection of an unread message.</p> <p>forwarded information concerning the forwarding of a message.</p>
Member of	model.correspDescPart
Contained by	header: correspDesc

May contain	core: date name note p rs header: idno
Example	<pre><correspAction type="sent"> <persName>Adelbert von Chamisso</persName> <settlement>Vertus</settlement> <date when="1807-01-29"/> </correspAction></pre>
Content model	<pre><content> <alternate minOccurs="1" maxOccurs="1"> <classRef key="model.correspActionPart" minOccurs="1" maxOccurs="unbounded"/> <classRef key="model.pLike" minOccurs="1" maxOccurs="unbounded"/> </alternate> </content></pre>
Schema Declaration	<pre>element correspAction { att.global.attributes, att.typed.attribute.subtype, att.sortable.attributes, attribute type { "sent" "received" "transmitted" "redirected" "forwarded" }, (model.correspActionPart+ model.pLike+) }</pre>

9.1.10. <correspDesc>

<correspDesc> (correspondence description) contains a description of the actions related to one act of correspondence. [2.4.6. Correspondence Description]	
Module	header
Attributes	Attributes att.declarable (@default) att.canonical (@key, @ref) att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.typed (@type, @subtype)
Member of	model.profileDescPart
Contained by	header: profileDesc
May contain	core: note p header: correspAction
Example	<pre><correspDesc> <correspAction type="sent"> <persName>Carl Maria von Weber</persName> <settlement>Dresden</settlement> <date when="1817-06-23">23 June 1817</date> </correspAction> <correspAction type="received"> <persName>Caroline Brandt</persName> <settlement>Prag</settlement> </correspAction> <correspContext> <ref type="prev" target="http://www.weber-gesamtausgabe.de/A041209">Previous letter of <persName>Carl Maria von Weber</persName> to <persName>Caroline Brandt</persName>: <date from="1817-06-19" to="1817-06-20">June 19/20, 1817</date> </ref> <ref type="next" target="http://www.weber-gesamtausgabe.de/A041217">Next letter of <persName>Carl Maria von Weber</persName> to <persName>Caroline Brandt</persName>: <date when="1817-06-27">June 27, 1817</date> </ref> </correspContext> </correspDesc></pre>
Content model	<pre><content> <alternate minOccurs="1" maxOccurs="1"> <classRef key="model.correspDescPart" minOccurs="1" maxOccurs="unbounded"/> <classRef key="model.pLike" minOccurs="1" maxOccurs="unbounded"/> </alternate></pre>

	<code></content></code>
Schema Declaration	<pre> element correspDesc { att.declarable.attributes, att.canonical.attributes, att.global.attributes, att.typed.attributes, (model.correspDescPart+ model.pLike+) } </pre>

9.1.11. <creation>

<creation> contains information about the creation of a text. [2.4.1. Creation 2.4. The Profile Description]	
Module	header
Member of	<u>model.profileDescPart</u>
Contained by	header: <u>profileDesc</u>
May contain	core: <u>date</u> <u>hi</u> <u>name</u> <u>ref</u> <u>rs</u> <u>title</u> header: <u>idno</u> transcr: <u>subst</u> character data
Note	<p>The <u><creation></u> element may be used to record details of a text's creation, e.g. the date and place it was composed, if these are of interest.</p> <p>It may also contain a more structured account of the various stages or revisions associated with the evolution of a text; this should be encoded using the <u><listChange></u> element. It should not be confused with the <u><publicationStmt></u> element, which records date and place of publication.</p>
Example	<pre> <creation> <date type="sortDate" when-iso="1922-11-30">30.11.1922</date> </creation> </pre>
Content model	<pre> <content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.limitedPhrase"/> <elementRef key="listChange"/> </alternate> </content> </pre>
Schema Declaration	<pre> element creation { (text model.limitedPhrase listChange) * } </pre>

9.1.12. <date>

<date> contains a date in any format. [3.5.4. Dates and Times 2.2.4. Publication, Distribution, Licensing, etc. 2.6. The Revision Description 3.11.2.4. Imprint, Size of a Document, and Reprint Information 15.2.3. The Setting Description 13.3.6. Dates and Times]	
Module	core
Attributes	Attributes <u>att.typed</u> (@type, @subtype) <u>att.dateable.iso</u> (@when-iso, @notBefore-iso, @notAfter-iso, @from-iso, @to-iso)
Member of	<u>model.dateLike</u> <u>model.publicationStmtPart.detail</u>
Contained by	core: <u>add</u> <u>author</u> <u>date</u> <u>del</u> <u>editor</u> <u>hi</u> <u>name</u> <u>note</u> <u>p</u> <u>publisher</u> <u>q</u> <u>quote</u> <u>ref</u> <u>resp</u> <u>rs</u> <u>title</u> figures: <u>cell</u> header: <u>change</u> <u>correspAction</u> <u>creation</u> <u>handNote</u> <u>licence</u> <u>publicationStmt</u> textcrit: <u>witness</u> textstructure: <u>dateline</u> <u>opener</u> transcr: <u>supplied</u>
May contain	core: <u>add</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>pb</u> <u>ref</u> <u>rs</u> <u>title</u> header: <u>idno</u> transcr: <u>subst</u> <u>supplied</u> character data
Example	<pre> <date when-iso="1922-11-30">30.11.1922</date> </pre>

Content model	<pre> <content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.gLike"/> <classRef key="model.phrase"/> <classRef key="model.global"/> </alternate> </content> </pre>
Schema Declaration	<pre> element date { att.dataable.iso.attribute.when-iso, att.dataable.iso.attribute.notBefore-iso, att.dataable.iso.attribute.notAfter-iso, att.dataable.iso.attribute.from-iso, att.dataable.iso.attribute.to-iso, att.typed.attributes, (text model.gLike model.phrase model.global) * } </pre>

9.1.13. <dateline>

<dateline> contains a brief description of the place, date, time, etc. of production of a letter, newspaper story, or other work, prefixed or suffixed to it as a kind of heading or trailer. [4.2.2. Openers and Closers]

Module	textstructure
Attributes	<p>Attributes</p> <p>xml:id (identifier) provides a unique identifier for the element bearing the attribute.</p> <p>Derived from <u>att.global</u></p> <p>Status Required</p> <p>Datatype ID</p>
Member of	<u>model.divWrapper</u>
Contained by	figures: <u>table</u> textstructure: <u>body</u> <u>div</u> <u>opener</u>
May contain	core: <u>add</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>pb</u> <u>ref</u> <u>rs</u> <u>title</u> header: <u>idno</u> transcr: <u>subst</u> <u>supplied</u> character data
Example	<u><dateline>Walden, this 29. of August 1592</dateline></u>
Example	<pre> <div type="chapter"> <p> <!-- ... --> and his heart was going like mad and yes I said yes I will Yes.</p> <closer> <dateline> <name type="place">Trieste-Zürich-Paris,</name> <date>1914-1921</date> </dateline> </closer> </div> </pre>
Content model	<pre> <content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.gLike"/> <classRef key="model.phrase"/> <classRef key="model.global"/> <elementRef key="docDate"/> </alternate> </content> </pre>
Schema Declaration	<pre> element dateline { attribute xml:id { text }, (text model.gLike model.phrase model.global docDate) * } </pre>

9.1.14.

 (deletion) contains a letter, word, or passage deleted, marked as deleted, or otherwise indicated as superfluous or spurious in the copy text by an author, scribe, or a previous annotator or corrector. [3.4.3. Additions, Deletions, and Omissions]	
Module	core
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.transcriptional</u> (@status, @cause, @seq) (<u>att.editLike</u> (@evidence, @instant) (<u>att.dimensions</u> (@unit, @quantity, @extent, @precision, @scope) (<u>att.ranging</u> (@atLeast, @atMost, @min, @max, @confidence))))) (<u>att.written</u> (@hand)) <u>att.typed</u> (@type, @subtype)
Member of	<u>model.pPart.transcriptional</u>
Contained by	core: <u>add</u> <u>author</u> <u>date</u> <u>del</u> <u>editor</u> <u>hi</u> <u>name</u> <u>note</u> <u>p</u> <u>publisher</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>title</u> figures: <u>cell</u> header: <u>change</u> <u>handNote</u> <u>licence</u> textstructure: <u>dateline</u> <u>opener</u> transcr: <u>subst</u> <u>supplied</u>
May contain	core: <u>add</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>pb</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>title</u> figures: <u>table</u> header: <u>idno</u> textcrit: <u>listWit</u> transcr: <u>subst</u> <u>supplied</u> character data
Note	<p>This element should be used for deletion of shorter sequences of text, typically single words or phrases. The <delSpan> element should be used for longer sequences of text, for those containing structural subdivisions, and for those containing overlapping additions and deletions.</p> <p>The text deleted must be at least partially legible in order for the encoder to be able to transcribe it (unless it is restored in a <supplied> tag). Illegible or lost text within a deletion may be marked using the <gap> tag to signal that text is present but has not been transcribed, or is no longer visible. Attributes on the <gap> element may be used to indicate how much text is omitted, the reason for omitting it, etc. If text is not fully legible, the <unclear> element (available when using the additional tagset for transcription of primary sources) should be used to signal the areas of text which cannot be read with confidence in a similar way.</p> <p>Degrees of uncertainty over what can still be read, or whether a deletion was intended may be indicated by use of the <certainty> element (see 21. Certainty, Precision, and Responsibility).</p> <p>There is a clear distinction in the TEI between and <surplus> on the one hand and <gap> or <unclear> on the other. indicates a deletion present in the source being transcribed, which states the author's or a later scribe's intent to cancel or remove text. <surplus> indicates material present in the source being transcribed which should have been so deleted, but which is not in fact. <gap> or <unclear>, by contrast, signal an editor's or encoder's decision to omit something or their inability to read the source text. See sections 11.3.1.7. Text Omitted from or Supplied in the Transcription and 11.3.3.2. Use of the gap, del, damage, unclear, and supplied Elements in Combination for the relationship between these and other related elements used in detailed transcription.</p>
Example	<pre><1> <del rend="overtyped">Mein Frisch <del rend="overstrike" type="primary">schwebt weht der Wind </1></pre>
Example	<pre><del rend="overstrike"> <gap reason="illegible" quantity="5" unit="character"/> </pre>
Content model	<pre><content> <macroRef key="macro.paraContent"/> </content></pre>
Schema Declaration	<pre>element del {</pre>

	<pre> att.global.attributes, att.transcriptional.attributes, att.typed.attributes, macro.paraContent } </pre>
--	---

9.1.15. <div>

<div> (text division) contains a subdivision of the front, body, or back of a text. [4.1. Divisions of the Body]	
Module	textstructure
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.divLike</u> (@org, @sample) (<u>att.fragmentable</u> (@part)) <u>att.typed</u> (@type, @subtype) <u>att.declaring</u> (@decls) <u>att.written</u> (@hand)

Schema Declaration	<pre> element div { att.global.attributes, att.divLike.attributes, att.typed.attributes, att.declaring.attributes, att.written.attributes, ((model.divTop model.global)*, ((((model.divLike model.divGenLike), model.global*)+ ((model.common, model.global*)+, ((model.divLike model.divGenLike), model.global*)+)), (model.divBottom, model.global*)*)?) } </pre>

9.1.16. <editor>

<editor> contains a secondary statement of responsibility for a bibliographic item, for example the name of an individual, institution or organization, (or of several such) acting as editor, compiler, translator, etc. [3.11.2.2. Titles, Authors, and Editors]

Module	core
Attributes	<p>Attributes</p> <p>ref (reference) provides an explicit means of locating a full definition or identity for the entity being named by means of one or more URIs.</p> <p>Derived from <u>att.canonical</u></p> <p>Status Required</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by whitespace</p>
Member of	<u>model.respLike</u>
Contained by	header: <u>titleStmt</u>
May contain	<p>core: <u>add</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>pb</u> <u>ref</u> <u>rs</u> <u>title</u></p> <p>header: <u>idno</u></p> <p>transcr: <u>subst</u> <u>supplied</u></p> <p>character data</p>
Note	<p>A consistent format should be adopted.</p> <p>Particularly where cataloguing is likely to be based on the content of the header, it is advisable to use generally recognized authority lists for the exact form of personal names.</p>
Example	<pre> <titleStmt> <title>Brief Samek an Reichspost (verantw. Red. Karl Schifflleitner)</title> <author ref="https://pmb.acdh.oeaw.ac.at/entity/38909">Oskar Samek</author> <editor ref="#IL">Isabell Langkabel</editor> <respStmt> <resp ref="http://id.loc.gov/vocabulary/relators/trc">Transkription</resp> <name ref="#IL">Isabell Langkabel</name> </pre>

	<pre> </respStmt> <respStmt> <resp ref="http://id.loc.gov/vocabulary/relators/mrk">TEI-Encoding</resp> <name ref="#IB">Ingo Börner</name> <name ref="#VH">Vanessa Hanneschläger</name> </respStmt> </titleStmt> </pre>
Content model	<pre> <content> <macroRef key="macro.phraseSeq"/> </content> </pre>
Schema Declaration	<pre> element editor { attribute ref { list { + } }, macro.phraseSeq } </pre>

9.1.17. <facsimile>

<facsimile> contains a representation of some written source in the form of a set of images rather than as transcribed or encoded text. [11.1. Digital Facsimiles]	
Module	transcr
Attributes	<p>Attributes</p> <p>xml:id (identifier) provides a unique identifier for the element bearing the attribute.</p> <p>Derived from <u>att.global</u></p> <p>Status Required</p> <p>Datatype ID</p>
Member of	model.resourceLike
Contained by	textstructure: TEI
May contain	<p>core: <u>graphic</u></p> <p>transcr: <u>surface</u> <u>surfaceGrp</u></p>
Example	<pre> <facsimile> <graphic url="page1.png"/> <surface> <graphic url="page2-highRes.png"/> <graphic url="page2-lowRes.png"/> </surface> <graphic url="page3.png"/> <graphic url="page4.png"/> </facsimile> </pre>
Example	<pre> <facsimile> <surface ulx="0" uly="0" lrx="200" lry="300"> <graphic url="Bovelles-49r.png"/> </surface> </facsimile> </pre>
Content model	<pre> <content> <sequence minOccurs="1" maxOccurs="1"> <elementRef key="front" minOccurs="0"/> <alternate minOccurs="1" maxOccurs="unbounded"> <classRef key="model.graphicLike"/> <elementRef key="surface"/> <elementRef key="surfaceGrp"/> </alternate> <elementRef key="back" minOccurs="0"/> </sequence> </content> </pre>
Schema Declaration	<pre> element facsimile { attribute xml:id { text }, (front?, (model.graphicLike surface surfaceGrp)+, back?) } </pre>

9.1.18. <fileDesc>

<fileDesc> (file description) contains a full bibliographic description of an electronic file. [2.2. The File Description 2.1.1. The TEI Header and Its Components]

Module	header
Contained by	header: teiHeader
May contain	header: publicationStmt sourceDesc titleStmt
Note	The major source of information for those seeking to create a catalogue entry or bibliographic citation for an electronic file. As such, it provides a title and statements of responsibility together with details of the publication or distribution of the file, of any series to which it belongs, and detailed bibliographic notes for matters not addressed elsewhere in the header. It also contains a full bibliographic description for the source or sources from which the electronic text was derived.
Example	<pre> <fileDesc> <titleStmt> <title>The shortest possible TEI document</title> </titleStmt> <publicationStmt> <p>Distributed as part of TEI P5</p> </publicationStmt> <sourceDesc> <p>No print source exists: this is an original digital text</p> </sourceDesc> </fileDesc> </pre>
Content model	<pre> <content> <sequence minOccurs="1" maxOccurs="1"> <sequence minOccurs="1" maxOccurs="1"> <elementRef key="titleStmt"/> <elementRef key="editionStmt" minOccurs="0"/> <elementRef key="extent" minOccurs="0"/> <elementRef key="publicationStmt"/> <elementRef key="seriesStmt" minOccurs="0"/> <elementRef key="notesStmt" minOccurs="0"/> </sequence> <elementRef key="sourceDesc" minOccurs="1" maxOccurs="unbounded"/> </sequence> </content> </pre>
Schema Declaration	<pre> element fileDesc { (titleStmt, editionStmt?, extent?, publicationStmt, seriesStmt?, notesStmt?), sourceDesc+ } </pre>

9.1.19. <gap>

<gap> indicates a point where material has been omitted in a transcription, whether for editorial reasons described in the TEI header, as part of sampling practice, or because the material is illegible, invisible, or inaudible. [3.4.3. Additions, Deletions, and Omissions]	
Module	core
Attributes	<p>Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.timed (@start, @end) att.editLike (@evidence, @instant) (att.dimensions (@unit, @quantity, @extent, @precision, @scope) (att.ranging (@atLeast, @atMost, @min, @max, @confidence)))</p> <p>reason gives the reason for omission</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of teidata.enumerated separated by whitespace</p>

	<p>Suggested values include:</p> <ul style="list-style-type: none"> cancelled deleted editorial for features omitted from transcription due to editorial policy illegible inaudible irrelevant sampling <p>hand in the case of text omitted from the transcription because of deliberate deletion by an identifiable hand, indicates the hand which made the deletion.</p> <p>Deprecated will be removed on 2017-08-01</p> <p>Status Optional</p> <p>Datatype teidata.pointer</p> <p>agent in the case of text omitted because of damage, categorizes the cause of the damage, if it can be identified.</p> <p>Status Optional</p> <p>Datatype teidata.enumerated</p> <p>Sample values include:</p> <ul style="list-style-type: none"> rubbing damage results from rubbing of the leaf edges mildew damage results from mildew on the leaf surface smoke damage results from smoke

Member of	<u>model.milestoneLike</u>
Contained by	core: <u>add</u> <u>author</u> <u>date</u> <u>del</u> <u>editor</u> <u>hi</u> <u>name</u> <u>note</u> <u>p</u> <u>publisher</u> <u>q</u> <u>quote</u> <u>ref</u> <u>resp</u> <u>rs</u> <u>title</u> figures: <u>cell</u> <u>table</u> header: <u>change</u> <u>handNote</u> <u>licence</u> namesdates: <u>org</u> <u>person</u> textstructure: <u>body</u> <u>dateline</u> <u>div</u> <u>opener</u> <u>text</u> transcr: <u>subst</u> <u>supplied</u> <u>surface</u> <u>surfaceGrp</u>
May contain	Empty element
Note	By convention, <lb> elements should appear at the point in the text where a new line starts. The <i>n</i> attribute, if used, indicates the number or other value associated with the text between this point and the next <lb> element, typically the sequence number of the line within the page, or other appropriate unit. This element is intended to be used for marking actual line breaks on a manuscript or printed page, at the point where they occur; it should not be used to tag structural units such as lines of verse (for which the <l> element is available) except in circumstances where structural units cannot otherwise be marked. The <i>type</i> attribute may be used to characterize the line break in any respect. The more specialized attributes <i>break</i> , <i>ed</i> , or <i>edRef</i> should be preferred when the intent is to indicate whether or not the line break is word-breaking, or to note the source from which it derives.
Example	This example shows typographical line breaks within metrical lines, where they occur at different places in different editions: <pre><l>Of Mans First Disobedience,<lb ed="1674"/> and<lb ed="1667"/> the Fruit</l> <l>Of that Forbidden Tree, whose<lb ed="1667 1674"/> mortal tast</l> <l>Brought Death into the World,<lb ed="1667"/> and all<lb ed="1674"/> our woe,</l></pre>
Example	This example encodes typographical line breaks as a means of preserving the visual appearance of a title page. The <i>break</i> attribute is used to show that the line break does not (as elsewhere) mark the start of a new word. <pre><titlePart> <lb/>With Additions, ne-<lb break="no"/>ver before Printed. </titlePart></pre>
Content model	<content/>
Schema Declaration	<pre>element lb { att.global.attributes, att.typed.attributes, att.edition.attributes, att.spanning.attributes, att.breaking.attributes, empty }</pre>

9.1.26. <licence>

<licence> contains information about a licence or other legal agreement applicable to the text. [2.2.4. Publication, Distribution, Licensing, etc.]	
Module	header
Attributes	Attributes target specifies the destination of the reference by supplying one or more URI References

	Derived from att.pointing Status Required Datatype 1–# occurrences of teidata.pointer separated by whitespace
Member of	model.availabilityPart
Contained by	header: availability
May contain	core: add date del gap graphic hi lb name note p pb q quote ref rs title figures: table header: idno textcrit: listWit transcr: subst supplied character data
Note	A <licence> element should be supplied for each licence agreement applicable to the text in question. The <i>target</i> attribute may be used to reference a full version of the licence. The <i>when</i> , <i>notBefore</i> , <i>notAfter</i> , <i>from</i> or <i>to</i> attributes may be used in combination to indicate the date or dates of applicability of the licence.
Example	<pre><licence target="http://creativecommons.org/licenses/by/4.0">Creative Commons Namensnennung 4.0 International Lizenz</licence></pre>
Content model	<pre><content> <macroRef key="macro.specialPara"/> </content></pre>
Schema Declaration	<pre>element licence { attribute target { list { + } }, macro.specialPara }</pre>

9.1.27. [<listWit>](#)

<listWit> (witness list) lists definitions for all the witnesses referred to by a critical apparatus, optionally grouped hierarchically. [12.1. The Apparatus Entry, Readings, and Witnesses]	
Module	textcrit
Member of	model.listLike
Contained by	core: add del hi note p q quote ref title figures: cell header: change handNote licence sourceDesc textcrit: listWit witness textstructure: body div transcr: supplied
May contain	textcrit: listWit witness
Note	<p>May contain a series of <witness> or <listWit> elements.</p> <p>The provision of a <listWit> element simplifies the automatic processing of the apparatus, e.g. the reconstruction of the readings for all witnesses from an exhaustive apparatus.</p> <p>Situations commonly arise where there are many more or less fragmentary witnesses, such that there may be quite distinct groups of witnesses for different parts of a text or collection of texts. Such groups may be given separately, or nested within a single <listWit> element at the beginning of the file listing all the witnesses, partial and complete, for the text, with the attestation of fragmentary witnesses indicated within the apparatus by use of the <witStart> and <witEnd> elements described in section 12.1.5. Fragmentary Witnesses.</p> <p>Note however that a given witness can only be defined once, and can therefore only appear within a single <listWit> element.</p>
Example	<pre><sourceDesc> <listWit> <witness xml:id="D_000002-002-000-wit01" facs="#D_000002-002-000-facs001"/> <witness xml:id="D_000002-002-000-wit02" facs="#D_000002-002-000-facs002"> <!-- das ist der, der in Transkribus transkribiert worden ist --> </witness> <!-- wie kann man hinterlegen, welcher der Textzeugen Textgrundlage ist --> </listWit> <!-- hier gegebenfalls Apparat --></pre>

	<code></sourceDesc></code>
Content model	<pre> <content> <sequence minOccurs="1" maxOccurs="1"> <classRef key="model.headLike" minOccurs="0"/> <alternate minOccurs="1" maxOccurs="unbounded"> <elementRef key="witness"/> <elementRef key="listWit"/> </alternate> </sequence> </content> </pre>
Schema Declaration	<pre> element listWit { model.headLike?, (witness listWit)+ } </pre>

9.1.28. <name>

<name> (name, proper noun) contains a proper noun or noun phrase. [3.5.1. Referring Strings]	
Module	core
Attributes	Attributes att.canonical (key, @ref)
Member of	model.nameLike.agent model.personPart
Contained by	core: add author date del editor hi name note p publisher q quote ref resp respStmt rs title figures: cell header: change correspAction creation handNote licence namesdates: org person textcrit: witness textstructure: dateline opener transcr: supplied
May contain	core: add date del gap graphic hi lb name note pb ref rs title header: idno transcr: subst supplied character data
Note	Proper nouns referring to people, places, and organizations may be tagged instead with <persName>, <placeName>, or <orgName>, when the TEI module for names and dates is included.
Example	<code><name>Karl Kraus</name></code>
Content model	<pre> <content> <macroRef key="macro.phraseSeq"/> </content> </pre>
Schema Declaration	<pre> element name { att.canonical.attribute.ref, macro.phraseSeq } </pre>

9.1.29. <note>

<note> contains a note or annotation. [3.8.1. Notes and Simple Annotation 2.2.6. The Notes Statement 3.11.2.8. Notes and Statement of Language 9.3.5.4. Notes within Entries]	
Module	core
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.placement (@place) att.pointing (@targetLang, @target, @evaluate) att.typed (@type, @subtype) att.written (@hand) anchored indicates whether the copy text shows the exact place of reference for the note. Status Optional Datatype teidata.truthValue Default true Note In modern texts, notes are usually anchored by means of explicit footnote or endnote symbols. An explicit

	<p>indication of the phrase or line annotated may however be used instead (e.g. 'page 218, lines 3–4'). The <i>anchored</i> attribute indicates whether any explicit location is given, whether by symbol or by prose cross-reference. The value true indicates that such an explicit location is indicated in the copy text; the value false indicates that the copy text does not indicate a specific place of attachment for the note. If the specific symbols used in the copy text at the location the note is anchored are to be recorded, use the <i>n</i> attribute.</p> <p>targetEnd points to the end of the span to which the note is attached, if the note is not embedded in the text at that point.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of <code>teidata.pointer</code> separated by whitespace</p> <p>Note This attribute is retained for backwards compatibility; it may be removed at a subsequent release of the Guidelines. The recommended way of pointing to a span of elements is by means of the <code>range</code> function of XPointer, as further described in 16.2.4.6. <code>range()</code>.</p>
Member of	<code>model.correspActionPart</code> <code>model.correspDescPart</code> <code>model.noteLike</code>
Contained by	<p>core: <code>add</code> <code>author</code> <code>date</code> <code>del</code> <code>editor</code> <code>hi</code> <code>name</code> <code>note</code> <code>p</code> <code>publisher</code> <code>q</code> <code>quote</code> <code>ref</code> <code>resp</code> <code>respStmt</code> <code>rs</code> <code>title</code></p> <p>figures: <code>cell</code> <code>table</code></p> <p>header: <code>change</code> <code>correspAction</code> <code>correspDesc</code> <code>handNote</code> <code>licence</code></p> <p>namesdates: <code>org</code> <code>person</code></p> <p>textstructure: <code>body</code> <code>dateline</code> <code>div</code> <code>opener</code> <code>text</code></p> <p>transcr: <code>supplied</code> <code>surface</code> <code>surfaceGrp</code></p>
May contain	<p>core: <code>add</code> <code>date</code> <code>del</code> <code>gap</code> <code>graphic</code> <code>hi</code> <code>lb</code> <code>name</code> <code>note</code> <code>p</code> <code>pb</code> <code>q</code> <code>quote</code> <code>ref</code> <code>rs</code> <code>title</code></p> <p>figures: <code>table</code></p> <p>header: <code>idno</code></p> <p>textcrit: <code>listWit</code></p> <p>transcr: <code>subst</code> <code>supplied</code></p> <p>character data</p>
Example	<p>In the following example, the translator has supplied a footnote containing an explanation of the term translated as "painterly":</p> <pre> And yet it is not only in the great line of Italian renaissance art, but even in the painterly <note place="bottom" type="gloss" resp="#MDMH"> <term xml:lang="de">Malerisch</term>. This word has, in the German, two distinct meanings, one objective, a quality residing in the object, the other subjective, a mode of apprehension and creation. To avoid confusion, they have been distinguished in English as <mentioned>picturesque</mentioned> and <mentioned>painterly</mentioned> respectively. </note> style of the Dutch genre painters of the seventeenth century that drapery has this psychological significance. <!-- elsewhere in the document --> <respStmt xml:id="MDMH"> <resp>translation from German to English</resp> <name>Hottinger, Marie Donald Mackie</name> </respStmt> </pre> <p>For this example to be valid, the code MDMH must be defined elsewhere, for example by means of a responsibility statement in the associated TEI header.</p>
Example	<p>The global <i>n</i> attribute may be used to supply the symbol or number used to mark the note's point of attachment in the source text, as in the following example:</p> <pre> Mevorakh b. Saadya's mother, the matriarch of the family during the second half of the eleventh century, <note n="126" anchored="true"> The alleged mention of Judah Nagid's mother in a letter from 1071 is, in fact, a reference to Judah's children; cf. above, nn. 111 and 54. </note> is well known from Geniza documents published by Jacob Mann. </pre>

	However, if notes are numbered in sequence and their numbering can be reconstructed automatically by processing software, it may well be considered unnecessary to record the note numbers.
Content model	<pre><content> <macroRef key="macro.specialPara"/> </content></pre>
Schema Declaration	<pre>element note { att.global.attributes, att.placement.attributes, att.pointing.attributes, att.typed.attributes, att.written.attributes, attribute anchored { text }?, attribute targetEnd { list { + } }?, macro.specialPara }</pre>

9.1.33. <particDesc>

<particDesc> (participation description) describes the identifiable speakers, voices, or other participants in any kind of text or other persons named or otherwise referred to in a text, edition, or metadata. [15.2. Contextual Information]	
Module	corpus
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.declarable</u> (@default)
Member of	<u>model.profileDescPart</u>
Contained by	header: <u>profileDesc</u>
May contain	core: <u>p</u> namesdates: <u>org</u> <u>person</u>
Note	May contain a prose description organized as paragraphs, or a structured list of persons and person groups, with an optional formal specification of any relationships amongst them.
Example	<pre><particDesc> <listPerson> <person xml:id="P-1234" sex="2" age="mid"> <p>Female informant, well-educated, born in Shropshire UK, 12 Jan 1950, of unknown occupation. Speaks French fluently. Socio-Economic status B2.</p> </person> <person xml:id="P-4332" sex="1"> <persName> <surname>Hancock</surname> <forename>Antony</forename> <forename>Aloysius</forename> <forename>St John</forename> </persName> <residence notAfter="1959"> <address> <street>Railway Cuttings</street> <settlement>East Cheam</settlement> </address> </residence> <occupation>comedian</occupation> </person> <listRelation> <relation type="personal" name="spouse" mutual="#P-1234 #P-4332"/> </listRelation> </listPerson> </particDesc></pre> <p>This example shows both a very simple person description, and a very detailed one, using some of the more specialized elements from the module for Names and Dates.</p>
Content model	<pre><content></pre>

	<pre> <alternate minOccurs="1" maxOccurs="1"> <classRef key="model.pLike" minOccurs="1" maxOccurs="unbounded"/> <alternate minOccurs="1" maxOccurs="unbounded"> <classRef key="model.personLike"/> <elementRef key="listPerson"/> <elementRef key="listOrg"/> </alternate> </alternate> </content> </pre>
Schema Declaration	<pre> element particDesc { att.global.attributes, att.declarable.attributes, (model.pLike+ (model.personLike listPerson listOrg)+) } </pre>

9.1.34. <pb>

<pb> (page beginning) marks the beginning of a new page in a paginated document. [3.10.3. Milestone Elements]	
Module	core
Attributes	<p>Attributes <u>att.breaking</u> (@break)</p> <p>xml:id (identifier) provides a unique identifier for the element bearing the attribute.</p> <p>Derived from <u>att.global</u></p> <p>Status Required</p> <p>Datatype ID</p>
Member of	<u>model.milestoneLike</u>
Contained by	<p>core: <u>add author date del editor hi name note p publisher q quote ref resp rs title</u></p> <p>figures: <u>cell table</u></p> <p>header: <u>change handNote licence</u></p> <p>namesdates: <u>org person</u></p> <p>textstructure: <u>body dateline div opener text</u></p> <p>transcr: <u>subst supplied surface surfaceGrp</u></p>
May contain	Empty element
Note	<p>A <pb> element should appear at the start of the page which it identifies. The global <i>n</i> attribute indicates the number or other value associated with this page. This will normally be the page number or signature printed on it, since the physical sequence number is implicit in the presence of the <pb> element itself.</p> <p>The <i>type</i> attribute may be used to characterize the page break in any respect. The more specialized attributes <i>break</i>, <i>ed</i>, or <i>edRef</i> should be preferred when the intent is to indicate whether or not the page break is word-breaking, or to note the source from which it derives.</p>
Example	<p>Page numbers may vary in different editions of a text.</p> <pre> <p> ... <pb n="145" ed="ed2"/> <!-- Page 145 in edition "ed2" starts here --> ... <pb n="283" ed="ed1"/> <!-- Page 283 in edition "ed1" starts here--> ... </p> </pre>
Example	<p>A page break may be associated with a facsimile image of the page it introduces by means of the <i>facs</i> attribute</p> <pre> <body> <pb n="1" facs="page1.png"/> <!-- page1.png contains an image of the page; the text it contains is encoded here --> <p> <!-- ... --> </p> <pb n="2" facs="page2.png"/> <!-- similarly, for page 2 --> <p> <!-- ... --> </p> </body> </pre>
Content model	<content/>

Schema Declaration	<code>element pb { att.breaking.attributes, attribute xml:id { text }, empty }</code>
---------------------------	---

9.1.35. <person>

<person> provides information about an identifiable individual, for example a participant in a language interaction, or a person referred to in a historical source. [13.3.2. The Person Element 15.2.2. The Participant Description]

Module	namesdates
Attributes	<p>Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.editLike</u> (@evidence, @instant) (<u>att.dimensions</u> (@unit, @quantity, @extent, @precision, @scope) (<u>att.ranging</u> (@atLeast, @atMost, @min, @max, @confidence))) <u>att.sortable</u> (@sortKey)</p> <p>role specifies a primary role or classification for the person. Status Optional Datatype 1–# occurrences of <u>teidata.enumerated</u> separated by whitespace Note Values for this attribute may be locally defined by a project, using arbitrary keywords such as artist, employer, author, relative, or servant, each of which should be associated with a definition. Such local definitions will typically be provided by a <valList> element in the project schema specification.</p> <p>sex specifies the sex of the person. Status Optional Datatype 1–# occurrences of <u>teidata.sex</u> separated by whitespace Note Values for this attribute may be locally defined by a project, or may refer to an external standard, such as vCard's sex property http://microformats.org/wiki/gender-formats (in which M indicates male, F female, O other, N none or not applicable, U unknown), or the often used ISO 5218:2004 <i>Representation of Human Sexes</i> http://standards.iso.org/ittf/PubliclyAvailableStandards/c036266_ISO_IEC_5218_2004(E_F).zip (in which 0 indicates unknown; 1 male; 2 female; and 9 not applicable, although the ISO standard is widely considered inadequate); cf. CETH's <i>Recommendations for Inclusive Data Collection of Trans People</i> http://transhealth.ucsf.edu/trans?page=lib-data-collection.</p> <p>age specifies an age group for the person. Status Optional Datatype <u>teidata.enumerated</u> Note Values for this attribute may be locally defined by a project, using arbitrary keywords such as infant, child, teen, adult, or senior, each of which should be associated with a definition. Such local definitions will typically be provided by a <valList> element in the project schema specification.</p>
Member of	<u>model.personLike</u>
Contained by	corpus: <u>particDesc</u> namesdates: <u>org</u>
May contain	core: <u>gap lb name note p pb</u> header: <u>idno</u>
Note	May contain either a prose description organized as paragraphs, or a sequence of more specific demographic elements drawn from the <u>model.personPart</u> class.

Example	<pre><person sex="F" age="adult"> <p>Female respondent, well-educated, born in Shropshire UK, 12 Jan 1950, of unknown occupation. Speaks French status B2.</p> </person></pre>
Example	<pre><person sex="intersex" role="god" age="immortal"> <persName>Hermaphroditos</persName> <persName xml:lang="grc">##µ#####</persName> </person></pre>
Example	<pre><person xml:id="Ovi01" sex="1" role="poet"> <persName xml:lang="en">Ovid</persName> <persName xml:lang="la">Publius Ovidius Naso</persName> <birth when="-0044-03-20"> 20 March 43 BC <placeName> <settlement type="city">Sulmona</settlement> <country key="IT">Italy</country> </placeName> </birth> <death notBefore="0017" notAfter="0018">17 or 18 AD <placeName> <settlement type="city">Tomis (Constanta)</settlement> <country key="RO">Romania</country> </placeName> </death> </person></pre>
Content model	<pre><content> <alternate minOccurs="1" maxOccurs="1"> <classRef key="model.pLike" minOccurs="1" maxOccurs="unbounded"/> <alternate minOccurs="0" maxOccurs="unbounded"> <classRef key="model.personPart"/> <classRef key="model.global"/> </alternate> </alternate> </content></pre>
Schema Declaration	<pre>element person { att.global.attributes, att.editLike.attributes, att.sortable.attributes, attribute role { list { + } }?, attribute sex { list { + } }?, attribute age { text }?, (model.pLike+ (model.personPart model.global)*) }</pre>

9.1.36. <profileDesc>

<profileDesc> (text-profile description) provides a detailed description of non-bibliographic aspects of a text, specifically the languages and sublanguages used, the situation in which it was produced, the participants and their setting. [2.4. The Profile Description 2.1.1. The TEI Header and Its Components]	
Module	header
Member of	<u>model.teiHeaderPart</u>
Contained by	header: <u>teiHeader</u>
May contain	corpus: <u>particDesc</u> header: <u>correspDesc</u> <u>creation</u> <u>textClass</u> transcr: <u>handNotes</u>
Note	Although the content model permits it, it is rarely meaningful to supply multiple occurrences for any of the child elements of <u><profileDesc></u> unless these are documenting multiple texts.
Example	<pre><profileDesc> <creation> <!-- Datierung des Dokuments --> </creation> <langUsage> <!-- optional: Sprachen --> </langUsage> <textClass> <!-- Klassifizierung des Dokuments --> </textClass> <particDesc> <!-- aktiv handelnde Personen --> </particDesc> <correspDesc> <!-- optional, bei Briefen: Korrespondenz-Metadaten --> </correspDesc></pre>

	<pre> <handNotes> <!-- optional: Schreiberhände --> </handNotes> </profileDesc> </pre>
Content model	<pre> <content> <classRef key="model.profileDescPart" minOccurs="0" maxOccurs="unbounded"/> </content> </pre>
Schema Declaration	<pre> element profileDesc { model.profileDescPart* } </pre>

9.1.37. <publicationStmt>

<publicationStmt> (publication statement) groups information concerning the publication or distribution of an electronic or other text. [2.2.4. Publication, Distribution, Licensing, etc. 2.2. The File Description]

Module	header
Contained by	header: fileDesc
May contain	core: date p publisher ref header: availability idno
Note	Where a publication statement contains several members of the <code>model.publicationStmtPart.agency</code> or <code>model.publicationStmtPart.detail</code> classes rather than one or more paragraphs or anonymous blocks, care should be taken to ensure that the repeated elements are presented in a meaningful order. It is a conformance requirement that elements supplying information about publication place, address, identifier, availability, and date be given following the name of the publisher, distributor, or authority concerned, and preferably in that order.
Example	<pre> <publicationStmt> <publisher> <name>Austrian Centre for Digital Humanities and Cultural Heritage, Österreichische Akademie der Wissenschaften</name> <address> <street>Sonnenfelsgasse 19</street> <postCode>1010</postCode> <settlement>Wien</settlement> <country>Österreich</country> </address> <ref target="https://acdh.oeaw.ac.at">https://acdh.oeaw.ac.at</ref> </publisher> <publisher> <name>Ludwig Boltzmann Institut für Digital History</name> <address> <street>Hofburg, Batthianystiege</street> <postCode>1010</postCode> <settlement>Wien</settlement> <country>Österreich</country> </address> <ref target="https://geschichte.lbg.ac.at">https://geschichte.lbg.ac.at</ref> </publisher> <publisher> <name>Wienbibliothek im Rathaus</name> <address> <street>Friedrich-Schmidt-Platz 1</street> <postCode>1010</postCode> <country>Wien</country> <settlement>Österreich</settlement> </address> <ref target="https://www.wienbibliothek.at">https://www.wienbibliothek.at</ref> </publisher> <pubPlace>Wien, Österreich</pubPlace> <date>2021</date> <availability> <licence target="http://creativecommons.org/licenses/by/4.0">Creative Commons Namensnennung 4.0 International Lizenz</licence> </availability> <idno type="URL" subtype="legalkraus">https://legalkraus.acdh.oeaw.ac.at/id/D_000002-002-000</idno> <idno type="URL" subtype="krausonline">http://www.kraus.wienbibliothek.at/node/1540</idno> <idno type="ID" subtype="transkribus">365566</idno> </publicationStmt> </pre>
Content model	<pre> <content> <alternate minOccurs="1" maxOccurs="1"> <sequence minOccurs="1" maxOccurs="unbounded"> <classRef key="model.publicationStmtPart.agency"/> <classRef key="model.publicationStmtPart.detail" minOccurs="0" maxOccurs="unbounded"/> </sequence> </pre>

	<pre><classRef key="model.pLike" minOccurs="1" maxOccurs="unbounded"/> </alternate> </content></pre>
Schema Declaration	<pre>element publicationStmt { (model.publicationStmtPart.agency, model.publicationStmtPart.detail*)+ model.pLike+ }</pre>

9.1.38. <publisher>

<publisher> provides the name of the organization responsible for the publication or distribution of a bibliographic item. [3.11.2.4. Imprint, Size of a Document, and Reprint Information 2.2.4. Publication, Distribution, Licensing, etc.]	
Module	core
Member of	model.publicationStmtPart.agency
Contained by	header: publicationStmt
May contain	core: add date del gap graphic hi lb name note pb ref rs title header: idno transcr: subst supplied character data
Note	Use the full form of the name by which a company is usually referred to, rather than any abbreviation of it which may appear on a title page
Example	<pre><publisher> <name>Austrian Centre for Digital Humanities and Cultural Heritage, Österreichische Akademie der Wissenschaften</name> <address> <street>Sonnenfelsgasse 19</street> <postCode>1010</postCode> <settlement>Wien</settlement> <country>Österreich</country> </address> <ref target="https://acdh.oeaw.ac.at">https://acdh.oeaw.ac.at</ref> </publisher></pre>
Content model	<pre><content> <macroRef key="macro.phraseSeq"/> </content></pre>
Schema Declaration	<pre>element publisher { macro.phraseSeq }</pre>

9.1.39. <q>

<q> (quoted) contains material which is distinguished from the surrounding text using quotation marks or a similar method, for any one of a variety of reasons including, but not limited to: direct speech or thought, technical terms or jargon, authorial distance, quotations from elsewhere, and passages that are mentioned but not used. [3.3.3. Quotation]

Module	core
Attributes	<p>Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.ascribed (@who)</p> <p>type may be used to indicate whether the offset passage is spoken or thought, or to characterize it more finely.</p> <p>Status Optional</p> <p>Datatype teidata.enumerated</p> <p>Suggested values spoken representation of speech</p> <p>include: thought representation of thought, e.g. internal monologue</p> <p>written quotation from a written source</p>

	soCalled authorial distance foreign distinct linguistically distinct term technical term emph rhetorically emphasized mentioned referring to itself, not its normal referent
Member of	<u>model.qLike</u>
Contained by	core: <u>add del hi note p q quote ref title</u> figures: <u>cell</u> header: <u>change handNote licence</u> textcrit: <u>witness</u> textstructure: <u>body div</u> transcr: <u>supplied</u>
May contain	core: <u>add date del gap graphic hi lb name note p pb q quote ref rs title</u> figures: <u>table</u> header: <u>idno</u> textcrit: <u>listWit</u> transcr: <u>subst supplied</u> character data
Note	May be used to indicate that a passage is distinguished from the surrounding text for reasons concerning which no claim is made. When used in this manner, <u><q></u> may be thought of as syntactic sugar for <u><hi></u> with a value of <i>rend</i> that indicates the use of such mechanisms as quotation marks.
Example	It is spelled <u><q>Tübingen</q></u> – to enter the letter <u><q>u</q></u> with an umlaut hold down the <u><q>option</q></u> key and press <u><q>0 0 f c</q></u>
Content model	<pre> <content> <macroRef key="macro.specialPara"/> </content> </pre>
Schema Declaration	<pre> element q { att.global.attributes, att.ascribed.attributes, attribute type { "spoken" "thought" "written" "soCalled" "foreign" "distinct" "term" "emph" "mentioned" }?, macro.specialPara } </pre>

9.1.40. <quote>

<quote> (quotation) contains a phrase or passage attributed by the narrator or author to some agency external to the text. [3.3.3. Quotation 4.3.1. Grouped Texts]	
Module	core
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.facs</u> (@facs))

	(att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) <u>att.typed</u> (@type, @subtype)
Member of	<u>model.quoteLike</u>
Contained by	core: <u>add</u> <u>del</u> <u>hi</u> <u>note</u> <u>p</u> <u>q</u> <u>quote</u> <u>ref</u> <u>title</u> figures: <u>cell</u> header: <u>change</u> <u>handNote</u> <u>licence</u> textcrit: <u>witness</u> textstructure: <u>body</u> <u>div</u> transcr: <u>supplied</u>
May contain	core: <u>add</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>p</u> <u>pb</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>title</u> figures: <u>table</u> header: <u>idno</u> textcrit: <u>listWit</u> transcr: <u>subst</u> <u>supplied</u> character data
Note	If a bibliographic citation is supplied for the source of a quotation, the two may be grouped using the <cit> element.
Example	Lexicography has shown little sign of being affected by the work of followers of J.R. Firth, probably best summarized in his slogan, <quote>You shall know a word by the company it keeps</quote> <ref>(Firth, 1957)</ref>
Content model	<content> <macroRef key="macro.specialPara"/> </content>
Schema Declaration	element quote { att.global.attributes, att.typed.attributes, macro.specialPara }

9.1.41. <ref>

<ref> (reference) defines a reference to another location, possibly modified by additional text or comment. [3.6. Simple Links and Cross-References 16.1. Links]	
Module	core
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) <u>att.pointing</u> (@targetLang, @target, @evaluate) <u>att.internetMedia</u> (@mimeType) <u>att.typed</u> (@type, @subtype) <u>att.declaring</u> (@decls) <u>att.cReferencing</u> (@cRef)
Member of	<u>model.ptrLike</u>
Contained by	core: <u>add</u> <u>author</u> <u>date</u> <u>del</u> <u>editor</u> <u>hi</u> <u>name</u> <u>note</u> <u>p</u> <u>publisher</u> <u>q</u> <u>quote</u> <u>ref</u> <u>resp</u> <u>rs</u> <u>title</u> figures: <u>cell</u> header: <u>change</u> <u>creation</u> <u>handNote</u> <u>licence</u> <u>publicationStmnt</u> textcrit: <u>witness</u> textstructure: <u>dateline</u> <u>opener</u> transcr: <u>supplied</u>
May contain	core: <u>add</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>pb</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>title</u> figures: <u>table</u> header: <u>idno</u> textcrit: <u>listWit</u> transcr: <u>subst</u> <u>supplied</u> character data
Note	The <i>target</i> and <i>cRef</i> attributes are mutually exclusive.
Example	See especially <ref target="http://www.natcorp.ox.ac.uk/Texts/A02.xml#s2">the second sentence</ref>

Example	See also <ref target="#locution">s.v. <term>locution</term></ref>.
Schematron	<s:report test="@target and @cRef">Only one of the attributes @target' and @cRef' may be supplied on <s:name/> </s:report>
Content model	<pre><content> <macroRef key="macro.paraContent"/> </content></pre>
Schema Declaration	<pre>element ref { att.global.attributes, att.pointing.attributes, att.internetMedia.attributes, att.typed.attributes, att.declaring.attributes, att.cReferencing.attributes, macro.paraContent }</pre>

9.1.42. <resp>

<resp> (responsibility) contains a phrase describing the nature of a person's intellectual responsibility, or an organization's role in the production or distribution of a work. [3.11.2.2. Titles, Authors, and Editors 2.2.1. The Title Statement 2.2.2. The Edition Statement 2.2.5. The Series Statement]	
Module	core
Attributes	<p>Attributes</p> <p>ref (reference) provides an explicit means of locating a full definition or identity for the entity being named by means of one or more URIs.</p> <p>Derived from att.canonical</p> <p>Status Required</p> <p>Datatype 1–# occurrences of teidata.pointer separated by whitespace</p>
Contained by	core: respStmt
May contain	<p>core: date gap hi lb name note pb ref rs title</p> <p>header: idno</p> <p>transcr: subst</p> <p>character data</p>
Note	The attribute <i>ref</i> , inherited from the class att.canonical may be used to indicate the kind of responsibility in a normalized form by referring directly to a standardized list of responsibility types, such as that maintained by a naming authority, for example the list maintained at http://www.loc.gov/marc/relators/relacode.html for bibliographic usage.
Example	<pre><respStmt> <resp ref="http://id.loc.gov/vocabulary/relators/mrk">TEI-Encoding</resp> <name ref="#IB">Ingo Börner</name> </respStmt></pre>
Example	<pre><respStmt> <resp ref="http://id.loc.gov/vocabulary/relators/trc">Transkription</resp> <name ref="#IL">Isabell Langkabel</name> </respStmt></pre>
Content model	<pre><content> <macroRef key="macro.phraseSeq.limited"/> </content></pre>
Schema Declaration	<pre>element resp { attribute ref { list { + } }, macro.phraseSeq.limited }</pre>

9.1.43. <respStmt>

<respStmt> (statement of responsibility) supplies a statement of responsibility for the intellectual content of a text, edition, recording, or series, where the specialized elements for authors, editors, etc. do not suffice or do not apply. May also be used to encode information about individuals or organizations which have played a role in the production or distribution of
--

a bibliographic work. [3.11.2.2. Titles, Authors, and Editors 2.2.1. The Title Statement 2.2.2. The Edition Statement 2.2.5. The Series Statement]	
Module	core
Member of	<u>model.respLike</u>
Contained by	header: <u>titleStmt</u>
May contain	core: <u>name</u> <u>note</u> <u>resp</u>
Example	<pre><respStmt> <resp ref="http://id.loc.gov/vocabulary/relators/trc">Transkription</resp> <name ref="#IL">Isabell Langkabel</name> </respStmt></pre>
Example	<pre><respStmt> <resp ref="http://id.loc.gov/vocabulary/relators/mrk">TEI-Encoding</resp> <name ref="#IB">Ingo Börner</name> </respStmt></pre>
Content model	<pre><content> <sequence minOccurs="1" maxOccurs="1"> <alternate minOccurs="1" maxOccurs="1"> <sequence minOccurs="1" maxOccurs="1"> <elementRef key="resp" minOccurs="1" maxOccurs="unbounded"/> <classRef key="model.nameLike.agent" minOccurs="1" maxOccurs="unbounded"/> </sequence> <sequence minOccurs="1" maxOccurs="1"> <classRef key="model.nameLike.agent" minOccurs="1" maxOccurs="unbounded"/> <elementRef key="resp" minOccurs="1" maxOccurs="unbounded"/> </sequence> </alternate> <elementRef key="note" minOccurs="0" maxOccurs="unbounded"/> </sequence> </content></pre>
Schema Declaration	<pre>element respStmt { ((resp+, model.nameLike.agent+) (model.nameLike.agent+, resp+)), note* }</pre>

9.1.44. <revisionDesc>

<revisionDesc> (revision description) summarizes the revision history for a file. [2.6. The Revision Description 2.1.1. The TEI Header and Its Components]	
Module	header
Attributes	<p>Attributes</p> <p>status describes the status of a document either currently or, when associated with a dated element, at the time indicated.</p> <p>Derived from att.docStatus</p> <p>Status Required</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Legal values draft</p> <p>are: Entwurf[Default]</p> <p>done Bearbeitung abgeschlossen</p> <p>checked Korrektur gelesen</p>
Contained by	header: <u>teiHeader</u>
May contain	header: <u>change</u>

Note	If present on this element, the <i>status</i> attribute should indicate the current status of the document. The same attribute may appear on any <code><change></code> to record the status at the time of that change. Conventionally <code><change></code> elements should be given in reverse date order, with the most recent change at the start of the list.
Example	<pre><revisionDesc status="embargoed"> <change when="1991-11-11" who="#LB"> deleted chapter 10 </change> </revisionDesc></pre>
Content model	<pre><content> <alternate minOccurs="1" maxOccurs="1"> <elementRef key="list"/> <elementRef key="listChange"/> <elementRef key="change" minOccurs="1" maxOccurs="unbounded"/> </alternate> </content></pre>
Schema Declaration	<pre>element revisionDesc { attribute status { "draft" "done" "checked" }, (list listChange change+) }</pre>

9.1.45. `<row>`

<code><row></code> contains one row of a table. [14.1.1. TEI Tables]	
Module	figures
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.tableDecoration (@role, @rows, @cols)
Contained by	figures: table
May contain	figures: cell
Example	<pre><row role="data"> <cell role="label">Classics</cell> <cell>Idle listless and unimproving</cell> </row></pre>
Content model	<pre><content> <elementRef key="cell" minOccurs="1" maxOccurs="unbounded"/> </content></pre>
Schema Declaration	<pre>element row { att.global.attributes, att.tableDecoration.attributes, cell+ }</pre>

9.1.46. `<rs>`

<rs> (referencing string) contains a general purpose name or referring string. [13.2.1. Personal Names 3.5.1. Referring Strings]		
Module	core	
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.naming</u> (@role, @nymRef) (<u>att.canonical</u> (@key, @ref)) <u>att.typed</u> (type, @subtype)	
	type	<div><div>Status</div><div>Required</div></div>
	<div><div>Legal values</div><div>are:</div></div>	<div><div>person</div><div>Person</div></div>
		<div><div>institution</div><div>Institution</div></div>
		<div><div>place</div><div>Ort</div></div>
		<div><div>work</div><div></div></div>

9.1.47. <sourceDesc>

<sourceDesc> (source description) describes the source from which an electronic text was derived or generated, typically a bibliographic description in the case of a digitized text, or a phrase such as "born digital" for a text which has no previous existence. [2.2.7. The Source Description]

Module	header
Contained by	header: <u>fileDesc</u>
May contain	core: <u>p</u> figures: <u>table</u> textcrit: <u>listWit</u>
Example	<pre><sourceDesc> <listWit> <witness xml:id="D_000002-002-000-wit01" facs="#D_000002-002-000-facs001"/> <witness xml:id="D_000002-002-000-wit02" facs="#D_000002-002-000-facs002"> <!-- das ist der, der in Transkribus transkribiert worden ist --> </witness> <!-- wie kann man hinterlegen, welcher der Textzeugen Textgrundlage ist --> </listWit> <!-- hier gegebenfalls Apparat --> </sourceDesc></pre>
Content model	<pre><content> <alternate minOccurs="1" maxOccurs="1"> <classRef key="model.pLike" minOccurs="1" maxOccurs="unbounded"/> <alternate minOccurs="1" maxOccurs="unbounded"> <classRef key="model.biblLike"/> <classRef key="model.sourceDescPart"/> <classRef key="model.listLike"/> </alternate> </alternate> </content></pre>

Schema Declaration	<pre> element sourceDesc { model.pLike+ (model.biblLike model.sourceDescPart model.listLike)+ } </pre>
---------------------------	--

9.1.48. <subst>

<subst> (substitution) groups one or more deletions with one or more additions when the combination is to be regarded as a single intervention in the text. [11.3.1.5. Substitutions]	
Module	transcr
Attributes	Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.transcriptional (@status, @cause, @seq) (att.editLike (@evidence, @instant) (att.dimensions (@unit, @quantity, @extent, @precision, @scope) (att.ranging (@atLeast, @atMost, @min, @max, @confidence)))) (att.written (@hand))

Schematron	<s:assert test="child::tei:add and child::tei:del"> <s:name/> must have at least one child add and at least one child del</s:assert>
Content model	<pre> <content> <alternate minOccurs="1" maxOccurs="unbounded"> <elementRef key="add"/> <elementRef key="del"/> <classRef key="model.milestoneLike"/> </alternate> </content> </pre>
Schema Declaration	<pre> element subst { </pre>

	<pre> att.global.attributes, att.transcriptional.attributes, (add del model.milestoneLike)+ </pre>
--	--

9.1.49. <supplied>

<p><supplied> signifies text supplied by the transcriber or editor for any reason; for example because the original cannot be read due to physical damage, or because of an obvious omission by the author or scribe. [11.3.3.1. Damage, Illegibility, and Supplied Text]</p>	
Module	transcr
Attributes	<p>Attributes <u>att.global</u> (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (<u>att.global.rendition</u> (@rend, @style, @rendition)) (<u>att.global.facs</u> (@facs)) (<u>att.global.change</u> (@change)) (<u>att.global.responsibility</u> (@cert, @resp)) (<u>att.global.source</u> (@source)) <u>att.editLike</u> (@evidence, @instant) (<u>att.dimensions</u> (@unit, @quantity, @extent, @precision, @scope) (<u>att.ranging</u> (@atLeast, @atMost, @min, @max, @confidence))))</p> <p>reason one or more words indicating why the text has had to be supplied, e.g. <i>overbinding, faded-ink, lost-folio, omitted-in-original</i>.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.word</u> separated by whitespace</p>
Member of	<u>model.pPart.transcriptional</u>
Contained by	<p>core: <u>add</u> <u>author</u> <u>date</u> <u>del</u> <u>editor</u> <u>hi</u> <u>name</u> <u>note</u> <u>p</u> <u>publisher</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>title</u></p> <p>figures: <u>cell</u></p> <p>header: <u>change</u> <u>handNote</u> <u>licence</u></p> <p>textstructure: <u>dateline</u> <u>opener</u></p> <p>transcr: <u>supplied</u></p>
May contain	<p>core: <u>add</u> <u>date</u> <u>del</u> <u>gap</u> <u>graphic</u> <u>hi</u> <u>lb</u> <u>name</u> <u>note</u> <u>pb</u> <u>q</u> <u>quote</u> <u>ref</u> <u>rs</u> <u>title</u></p> <p>figures: <u>table</u></p> <p>header: <u>idno</u></p> <p>textcrit: <u>listWit</u></p> <p>transcr: <u>subst</u> <u>supplied</u></p> <p>character data</p>
Note	The <damage>, <gap>, , <unclear> and <supplied> elements may be closely allied in use. See section 11.3.3.2. Use of the gap, del, damage, unclear, and supplied Elements in Combination for discussion of which element is appropriate for which circumstance.
Example	<pre> I am dr Sr yr <supplied reason="illegible" source="#amanuensis_copy">very humble Servt</supplied> Sydney Smith </pre>
Example	<pre> <supplied reason="omitted-in-original">Dedication</supplied> to the duke of Bejar </pre>
Content model	<pre> <content> <macroRef key="macro.paraContent"/> </content> </pre>
Schema Declaration	<pre> element supplied { att.global.attributes, att.editLike.attributes, attribute reason { list { + } }?, macro.paraContent } </pre>

9.1.50. <surface>

<p><surface> defines a written surface as a two-dimensional coordinate space, optionally grouping one or more graphic representations of that space, zones of interest within that space, and transcriptions of the writing within them. [11.1. Digital Facsimiles 11.2.2. Embedded Transcription]</p>	
Module	transcr
Attributes	Attributes

	<p>xml:id (identifier) provides a unique identifier for the element bearing the attribute.</p> <p>Derived from <u>att.global</u></p> <p>Status Required</p> <p>Datatype ID</p> <p>type characterizes the element in some sense, using any convenient classification scheme or typology.</p> <p>Derived from <u>att.typed</u></p> <p>Status Required</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Legal values are: recto Vorderseite verso Rückseite</p>
Contained by	transcr: <u>facsimile surface surfaceGrp</u>
May contain	core: <u>gap graphic lb note pb</u> transcr: <u>surface surfaceGrp</u>
Note	<p>The <u><surface></u> element represents any two-dimensional space on some physical surface forming part of the source material, such as a piece of paper, a face of a monument, a billboard, a scroll, a leaf etc.</p> <p>The coordinate space defined by this element may be thought of as a grid <i>lr_x</i> - <i>ul_x</i> units wide and <i>uly</i> - <i>lry</i> units high.</p> <p>The <u><surface></u> element may contain graphic representations or transcriptions of written zones, or both. The coordinate values used by every <u><zone></u> element contained by this element are to be understood with reference to the same grid.</p> <p>Where it is useful or meaningful to do so, any grouping of multiple <u><surface></u> elements may be indicated using the <u><surfaceGrp></u> elements.</p>
Example	<pre><facsimile> <surface ulx="0" uly="0" lrx="200" lry="300"> <graphic url="Bovelles-49r.png"/> </surface> </facsimile></pre>
Content model	<pre><content> <sequence minOccurs="1" maxOccurs="1"> <alternate minOccurs="0" maxOccurs="unbounded"> <classRef key="model.global"/> <classRef key="model.labellike"/> <classRef key="model.graphiclike"/> </alternate> <sequence minOccurs="0" maxOccurs="unbounded"> <alternate minOccurs="1" maxOccurs="1"> <elementRef key="zone"/> <elementRef key="line"/> <elementRef key="surface"/> <elementRef key="surfaceGrp"/> </alternate> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> </sequence> </sequence> </content></pre>
Schema Declaration	<pre>element surface { attribute xml:id { text }, attribute type { "recto" "verso" }, ((model.global model.labellike model.graphiclike)*, ((zone line surface surfaceGrp), model.global*)*) }</pre>

9.1.51. <surfaceGrp>

<surfaceGrp> defines any kind of useful grouping of written surfaces, for example the recto and verso of a single leaf, which the encoder wishes to treat as a single unit. [11.1. Digital Facsimiles]	
Module	transcr
Attributes	<p>Attributes</p> <p>xml:id (identifier) provides a unique identifier for the element bearing the attribute.</p> <p>Derived from att.global</p> <p>Status Required</p> <p>Datatype ID</p>
Contained by	transcr: facsimile surface surfaceGrp
May contain	core: gap lb note pb transcr: surface surfaceGrp
Note	Where it is useful or meaningful to do so, any grouping of multiple <surface> elements may be indicated using the <surfaceGrp> elements.
Example	<pre><sourceDoc> <surfaceGrp> <surface ulx="0" uly="0" lrx="200" lry="300"> <graphic url="Bovelles-49r.png" /> </surface> <surface ulx="0" uly="0" lrx="200" lry="300"> <graphic url="Bovelles-49v.png" /> </surface> </surfaceGrp> </sourceDoc></pre>
Content model	<pre><content> <alternate minOccurs="1" maxOccurs="unbounded"> <classRef key="model.global"/> <elementRef key="surface"/> <elementRef key="surfaceGrp"/> </alternate> </content></pre>
Schema Declaration	<pre>element surfaceGrp { attribute xml:id { text }, (model.global surface surfaceGrp)+ }</pre>

9.1.52. <table>

<table> contains text displayed in tabular form, in rows and columns. [14.1.1. TEI Tables]	
Module	figures
Attributes	<p>Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.typed (@type, @subtype)</p> <p>rows indicates the number of rows in the table.</p> <p>Status Optional</p> <p>Datatype teidata.count</p> <p>Note If no number is supplied, an application must calculate the number of rows. Rows should be presented from top to bottom.</p> <p>cols (columns) indicates the number of columns in each row of the table.</p> <p>Status Optional</p> <p>Datatype teidata.count</p>

	<p>Note</p> <p>If no number is supplied, an application must calculate the number of columns. Within each row, columns should be presented left to right.</p>
Member of	<code>model.listLike</code>
Contained by	<p>core: <code>add del hi note p q quote ref title</code></p> <p>figures: <code>cell</code></p> <p>header: <code>change handNote licence sourceDesc</code></p> <p>textcrit: <code>witness</code></p> <p>textstructure: <code>body div</code></p> <p>transcr: <code>supplied</code></p>
May contain	<p>core: <code>gap graphic lb note pb</code></p> <p>figures: <code>row</code></p> <p>textstructure: <code>dateline</code></p>
Note	<p>Contains an optional heading and a series of rows. Any rendition information should be supplied using the global <i>rend</i> attribute, at the table, row, or cell level as appropriate.</p>
Example	<pre><table rows="4" cols="4"> <head>Poor Men's Lodgings in Norfolk (Mayhew, 1843)</head> <row role="label"> <cell role="data"/> <cell role="data">Dossing Cribs or Lodging Houses</cell> <cell role="data">Beds</cell> <cell role="data">Needys or Nightly Lodgers</cell> </row> <row role="data"> <cell role="label">Bury St Edmund's</cell> <cell role="data">5</cell> <cell role="data">8</cell> <cell role="data">128</cell> </row> <row role="data"> <cell role="label">Thetford</cell> <cell role="data">3</cell> <cell role="data">6</cell> <cell role="data">36</cell> </row> <row role="data"> <cell role="label">Attleboro'</cell> <cell role="data">3</cell> <cell role="data">5</cell> <cell role="data">20</cell> </row> <row role="data"> <cell role="label">Wymondham</cell> <cell role="data">1</cell> <cell role="data">11</cell> <cell role="data">22</cell> </row> </table></pre>
Content model	<pre><content> <sequence minOccurs="1" maxOccurs="1"> <alternate minOccurs="0" maxOccurs="unbounded"> <classRef key="model.headLike"/> <classRef key="model.global"/> </alternate> <alternate minOccurs="1" maxOccurs="1"> <sequence minOccurs="1" maxOccurs="unbounded"> <elementRef key="row"/> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> </sequence> <sequence minOccurs="1" maxOccurs="unbounded"> <classRef key="model.graphicLike"/> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> </sequence> </alternate> <sequence minOccurs="0" maxOccurs="unbounded"> <classRef key="model.divBottom"/> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> </sequence></pre>

	<pre> </sequence> </content> </pre>
Schema Declaration	<pre> element table { att.global.attributes, att.typed.attributes, attribute rows { text }?, attribute cols { text }?, ((model.headLike model.global)* , ((row, model.global*)+ (model.graphicLike, model.global*)+), (model.divBottom, model.global*)*) } </pre>

9.1.53. <teiHeader>

<teiHeader> (TEI header) supplies descriptive and declarative metadata associated with a digital resource or set of resources. [2.1.1. The TEI Header and Its Components 15.1. Varieties of Composite Text]	
Module	header
Contained by	textstructure: <u>TEI</u>
May contain	header: <u>fileDesc</u> <u>profileDesc</u> <u>revisionDesc</u>
Note	One of the few elements unconditionally required in any TEI document.
Example	<pre> <teiHeader> <fileDesc> <titleStmt> <title>Shakespeare: the first folio (1623) in electronic form</title> <author>Shakespeare, William (1564-1616)</author> <respStmt> <resp>Originally prepared by</resp> <name>Trevor Howard-Hill</name> </respStmt> <respStmt> <resp>Revised and edited by</resp> <name>Christine Avern-Carr</name> </respStmt> </titleStmt> <publicationStmt> <distributor>Oxford Text Archive</distributor> <address> <addrLine>13 Banbury Road, Oxford OX2 6NN, UK</addrLine> </address> <idno type="OTA">119</idno> <availability> <p>Freely available on a non-commercial basis.</p> </availability> <date when="1968">1968</date> </publicationStmt> <sourceDesc> <bibl>The first folio of Shakespeare, prepared by Charlton Hinman (The Norton Facsimile 1968)</bibl> </sourceDesc> </fileDesc> <encodingDesc> <projectDesc> <p>Originally prepared for use in the production of a series of old-spelling concordances in 1968, this text was extensively checked and revised for use during the editing of the new Oxford Shakespeare (Wells and Taylor, 1989).</p> </projectDesc> <editorialDecl> <correction> <p>Turned letters are silently corrected.</p> </correction> <normalization> <p>Original spelling and typography is retained, except that long s and ligatured forms are not encoded.</p> </normalization> </editorialDecl> <refsDecl xml:id="ASLREF"> <cRefPattern matchPattern="(\S+) ([^.]*)\.(.*)" replacementPattern="#xpath(//div1[@n='\$1']/div2[@n='\$2']//lb[@n='\$3'])"> <p>A reference is created by assembling the following, in the reverse order as that listed here: <list> <item>the <att>n</att> value of the preceding <gi>lb</gi> </item> <item>a period</item> <item>the <att>n</att> value of the ancestor <gi>div2</gi> </item> <item>a space</item> <item>the <att>n</att> value of the parent <gi>div1</gi> </item> </pre>

	<pre> </list> </p> </cRefPattern> </refsDecl> </encodingDesc> <revisionDesc> <list> <item> <date when="1989-04-12">12 Apr 89</date> Last checked by CAC</item> <item> <date when="1989-03-01">1 Mar 89</date> LB made new file</item> </list> </revisionDesc> </teiHeader> </pre>
Content model	<pre> <content> <sequence minOccurs="1" maxOccurs="1"> <elementRef key="fileDesc"/> <classRef key="model.teiHeaderPart" minOccurs="0" maxOccurs="unbounded"/> <elementRef key="revisionDesc" minOccurs="0"/> </sequence> </content> </pre>
Schema Declaration	<pre> element teiHeader { fileDesc, model.teiHeaderPart*, revisionDesc? } </pre>

9.1.54. <text>

<text> contains a single text of any kind, whether unitary or composite, for example a poem or drama, a collection of essays, a novel, a dictionary, or a corpus sample. [4. Default Text Structure 15.1. Varieties of Composite Text]	
Module	textstructure
Attributes	Attributes att.global.source (@source)
Member of	model.resourceLike
Contained by	textstructure: TEI
May contain	core: gap lb note pb textstructure: body
Note	This element should not be used to represent a text which is inserted at an arbitrary point within the structure of another, for example as in an embedded or quoted narrative; the <floatingText> is provided for this purpose.
Example	<pre> <text> <front> <docTitle> <titlePart>Autumn Haze</titlePart> </docTitle> </front> <body> <l>Is it a dragonfly or a maple leaf</l> <l>That settles softly down upon the water?</l> </body> </text> </pre>
Example	The body of a text may be replaced by a group of nested texts, as in the following schematic: <pre> <text> <front> <!-- front matter for the whole group --> </front> <group> <text> <!-- first text --> </text> <text> <!-- second text --> </text> </group> </text> </pre>
Content model	<pre> <content> <sequence minOccurs="1" maxOccurs="1"> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> <sequence minOccurs="0" maxOccurs="1"> <elementRef key="front"/> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> </sequence> </sequence> </pre>

	<pre> <alternate minOccurs="1" maxOccurs="1"> <elementRef key="body"/> <elementRef key="group"/> </alternate> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> <sequence minOccurs="0" maxOccurs="1"> <elementRef key="back"/> <classRef key="model.global" minOccurs="0" maxOccurs="unbounded"/> </sequence> </content> </pre>
Schema Declaration	<pre> element text { att.global.source.attribute.source, (model.global*, (front, model.global*)?, (body group), model.global*, (back, model.global*)?) } </pre>

9.1.55. <textClass>

<textClass> (text classification) groups information which describes the nature or topic of a text in terms of a standard classification scheme, thesaurus, etc. [2.4.3. The Text Classification]	
Module	header
Member of	model.profileDescPart
Contained by	header: profileDesc
May contain	header: catRef
Example	<pre> <textClass> <catRef target="https://vocabs.acdh.oeaw.ac.at/legalkraus-doctypes/v1.0/D.K.BRF"/> </textClass> </pre>
Content model	<pre> <content> <alternate minOccurs="0" maxOccurs="unbounded"> <elementRef key="classCode"/> <elementRef key="catRef"/> <elementRef key="keywords"/> </alternate> </content> </pre>
Schema Declaration	<pre> element textClass { (classCode catRef keywords)* } </pre>

9.1.56. <title>

<title> contains a title for any kind of work. [3.11.2.2. Titles, Authors, and Editors 2.2.1. The Title Statement 2.2.5. The Series Statement]	
Module	core
Member of	model.emphLike
Contained by	core: add author date del editor hi name note p publisher q quote ref resp rs title figures: cell header: change creation handNote licence titleStmnt textcrit: witness textstructure: dateline opener transcr: supplied
May contain	core: add date del gap graphic hi lb name note pb q quote ref rs title figures: table header: idno textcrit: listWit transcr: subst supplied character data

Note	The attributes <i>key</i> and <i>ref</i> , inherited from the class att.canonical may be used to indicate the canonical form for the title; the former, by supplying (for example) the identifier of a record in some external library system; the latter by pointing to an XML element somewhere containing the canonical form of the title.
Example	<pre><titleStmt> <title>Brief Samek an Reichspost (verantw. Red. Karl Schifffleitner)</title> <!-- ... --> </titleStmt></pre>
Example	<pre><titleStmt> <title>Privatanklage von Karl Kraus gegen Reichspost (verantw. Red. Karl Schifffleitner) wegen Verweigerung einer Berichtigung</title> <!-- ... --> </titleStmt></pre>
Content model	<pre><content> <macroRef key="macro.paraContent" /> </content></pre>
Schema Declaration	<pre>element title { macro.paraContent }</pre>

9.1.57. <titleStmt>

<titleStmt> (title statement) groups information about the title of a work and those responsible for its content. [2.2.1. The Title Statement 2.2. The File Description]	
Module	header
Contained by	header: fileDesc
May contain	core: author editor respStmt title
Example	<pre><titleStmt> <title>Brief Samek an Reichspost (verantw. Red. Karl Schifffleitner)</title> <author ref="https://pmb.acdh.oeaw.ac.at/entity/38909">Oskar Samek</author> <editor ref="#IL">Isabell Langkabel</editor> <respStmt> <resp ref="http://id.loc.gov/vocabulary/relators/trc">Transkription</resp> <name ref="#IL">Isabell Langkabel</name> </respStmt> <respStmt> <resp ref="http://id.loc.gov/vocabulary/relators/mkr">TEI-Encoding</resp> <name ref="#IB">Ingo Börner</name> <name ref="#VH">Vanessa Hanneschläger</name> </respStmt> </titleStmt></pre>
Content model	<pre><content> <sequence minOccurs="1" maxOccurs="1"> <elementRef key="title" minOccurs="1" maxOccurs="unbounded" /> <classRef key="model.respLike" minOccurs="0" maxOccurs="unbounded" /> </sequence> </content></pre>
Schema Declaration	<pre>element titleStmt { title+, model.respLike* }</pre>

9.1.58. <witness>

<witness> contains either a description of a single witness referred to within the critical apparatus, or a list of witnesses which is to be referred to by a single sigil. [12.1. The Apparatus Entry, Readings, and Witnesses]	
Module	textcrit
Attributes	<p>Attributes</p> <p>xml:id (identifier) provides a unique identifier for the element bearing the attribute.</p> <p>Derived from att.global</p> <p>Status Required</p> <p>Datatype ID</p> <p>facs (facsimile) points to all or part of an image which corresponds with the content of the element.</p>

	Derived from att.global.facs Status Required Datatype 1–# occurrences of teidata.pointer separated by whitespace
Contained by	textcrit: listWit
May contain	core: date hi name q quote ref rs title figures: table header: idno textcrit: listWit transcr: subst character data
Note	The content of the <code><witness></code> element may give bibliographic information about the witness or witness group, or it may be empty.
Example	<pre> <listWit> <witness xml:id="D_000002-002-000-wit01" facs="#D_000002-002-000-facs001"/> <witness xml:id="D_000002-002-000-wit02" facs="#D_000002-002-000-facs002"> <!-- das ist der, der in Transkribus transkribiert worden ist --> </witness> <!-- wie kann man hinterlegen, welcher der Textzeugen Textgrundlage ist --> </listWit> </pre>
Content model	<pre> <content> <macroRef key="macro.limitedContent"/> </content> </pre>
Schema Declaration	<pre> element witness { attribute xml:id { text }, attribute facs { list { + } }, macro.limitedContent } </pre>

9.2. Model classes

9.2.1. *model.availabilityPart*

model.availabilityPart groups elements such as licences and paragraphs of text which may appear as part of an availability statement [2.2.4. Publication, Distribution, Licensing, etc.]	
Module	tei
Used by	availability
Members	licence

9.2.2. *model.common*

model.common groups common chunk- and inter-level elements. [1.3. The TEI Class System]	
Module	tei
Used by	body div
Members	model.divPart [model.lLike model.pLike [p]] model.inter [model.biblLike model.egLike model.labelLike model.listLike [listWit table] model.oddDecl model.qLike [model.quoteLike [quote] q] model.stageLike]
Note	This class defines the set of chunk- and inter-level elements; it is used in many content models, including those for textual divisions.

9.2.3. *model.correspActionPart*

model.correspActionPart groups elements which define the parts (usually names, dates and places) of one action related to the correspondence.	
Module	tei

Used by	correspAction
Members	model.addressLike model.dateLike[date] model.nameLike[model.nameLike.agent[name] model.offsetLike model.persNamePart model.placeStateLike[model.placeNamePart] idno rs] note

9.2.4. *model.correspDescPart*

model.correspDescPart groups together metadata elements for describing correspondence	
Module	tei
Used by	correspDesc
Members	correspAction note

9.2.5. *model.dateLike*

model.dateLike groups elements containing temporal expressions. [3.5.4. Dates and Times 13.3.6. Dates and Times]	
Module	tei
Used by	model.correspActionPart model.pPart.data
Members	date

9.2.6. *model.divBottom*

model.divBottom groups elements appearing at the end of a text division. [4.2. Elements Common to All Divisions]	
Module	tei
Used by	body div table
Members	model.divBottomPart model.divWrapper[dateline]

9.2.7. *model.divLike*

model.divLike groups elements used to represent un-numbered generic structural divisions.	
Module	tei
Used by	body div
Members	div

9.2.8. *model.divPart*

model.divPart groups paragraph-level elements appearing directly within divisions. [1.3. The TEI Class System]	
Module	tei
Used by	macro.specialPara model.common
Members	model.lLike model.pLike[p]
Note	Note that this element class does not include members of the model.inter class, which can appear either within or between paragraph-level items.

9.2.9. *model.divTop*

model.divTop groups elements appearing at the beginning of a text division. [4.2. Elements Common to All Divisions]	
Module	tei
Used by	body div
Members	model.divTopPart[model.headLike opener] model.divWrapper[dateline]

9.2.10. *model.divTopPart*

model.divTopPart groups elements which can occur only at the beginning of a text division. [4.6. Title Pages]	
Module	tei
Used by	model.divTop
Members	model.headLike opener

9.2.11. *model.divWrapper*

model.divWrapper groups elements which can appear at either top or bottom of a textual division. [4.2. Elements Common to All Divisions]	
Module	tei
Used by	model.divBottom model.divTop
Members	dateline

9.2.12. *model.emphLike*

model.emphLike groups phrase-level elements which are typographically distinct and to which a specific function can be attributed. [3.3. Highlighting and Quotation]	
Module	tei
Used by	model.highlighted model.limitedPhrase
Members	title

9.2.13. *model.global*

model.global groups elements which may appear at any point within a TEI text. [1.3. The TEI Class System]	
Module	tei
Used by	body date dateline div macro.paraContent macro.phraseSeq macro.phraseSeq.limited macro.specialPara opener person surface surfaceGrp table text
Members	model.global.edit[<i>gap</i>] model.global.meta model.milestoneLike[<i>lb pb</i>] model.noteLike[<i>note</i>]

9.2.14. *model.global.edit*

model.global.edit groups globally available elements which perform a specifically editorial function. [1.3. The TEI Class System]	
Module	tei
Used by	model.global
Members	gap

9.2.15. *model.graphicLike*

model.graphicLike groups elements containing images, formulae, and similar objects. [3.9. Graphics and Other Non-textual Components]	
Module	tei
Used by	facsimile model.phrase surface table
Members	graphic

9.2.16. *model.hiLike*

model.hiLike groups phrase-level elements which are typographically distinct but to which no specific function can be attributed. [3.3. Highlighting and Quotation]	
Module	tei
Used by	model.highlighted model.limitedPhrase
Members	hi

9.2.17. *model.highlighted*

model.highlighted groups phrase-level elements which are typographically distinct. [3.3. Highlighting and Quotation]	
Module	tei
Used by	model.phrase
Members	model.emphLike[<i>title</i>] model.hiLike[<i>hi</i>]

9.2.18. *model.inter*

model.inter groups elements which can appear either within or between paragraph-like elements. [1.3. The TEI Class System]	
Module	tei
Used by	macro.limitedContent macro.paraContent macro.specialPara model.common
Members	model.biblLike model.egLike model.labelLike model.listLike [listWit table] model.oddDecl model.qLike [model.quoteLike [quote] q] model.stageLike

9.2.19. *model.limitedPhrase*

model.limitedPhrase groups phrase-level elements excluding those elements primarily intended for transcription of existing sources. [1.3. The TEI Class System]	
Module	tei
Used by	creation macro.limitedContent macro.phraseSeq.limited
Members	model.emphLike [title] model.hiLike [hi] model.pPart.data [model.addressLike model.dateLike [date] model.measureLike model.nameLike [model.nameLike.agent [name] model.offsetLike model.persNamePart model.placeStateLike [model.placeNamePart] idno rs] model.pPart.editorial [subst] model.pPart.msdesc model.phrase.xml model.ptrLike [ref]

9.2.20. *model.listLike*

model.listLike groups list-like elements. [3.7. Lists]	
Module	tei
Used by	model.inter sourceDesc
Members	listWit table

9.2.21. *model.milestoneLike*

model.milestoneLike groups milestone-style elements used to represent reference systems. [1.3. The TEI Class System 3.10.3. Milestone Elements]	
Module	tei
Used by	model.global org subst
Members	lb pb

9.2.22. *model.nameLike*

model.nameLike groups elements which name or refer to a person, place, or organization.	
Module	tei
Used by	model.correspActionPart model.pPart.data org
Members	model.nameLike.agent [name] model.offsetLike model.persNamePart model.placeStateLike [model.placeNamePart] idno rs
Note	A superset of the naming elements that may appear in datelines, addresses, statements of responsibility, etc.

9.2.23. *model.nameLike.agent*

model.nameLike.agent groups elements which contain names of individuals or corporate bodies. [3.5. Names, Numbers, Dates, Abbreviations, and Addresses]	
Module	tei
Used by	model.nameLike respStmt
Members	name
Note	This class is used in the content model of elements which reference names of people or organizations.

9.2.24. *model.noteLike*

model.noteLike groups globally-available note-like elements. [3.8. Notes, Annotation, and Indexing]	
Module	tei
Used by	model.global org
Members	note

9.2.25. *model.orgPart*

model.orgPart groups elements which form part of the description of an organization.	
Module	tei
Used by	org
Members	model.eventLike

9.2.26. *model.pLike*

model.pLike groups paragraph-like elements.	
Module	tei
Used by	availability correspAction correspDesc model.divPart org particDesc person publicationStmt sourceDesc
Members	p

9.2.27. *model.pPart.data*

model.pPart.data groups phrase-level elements containing names, dates, numbers, measures, and similar data. [3.5. Names, Numbers, Dates, Abbreviations, and Addresses]	
Module	tei
Used by	model.limitedPhrase model.phrase
Members	model.addressLike model.dateLike [date] model.measureLike model.nameLike [model.nameLike.agent [name]] model.offsetLike model.persNamePart model.placeStateLike [model.placeNamePart] idno rs]

9.2.28. *model.pPart.edit*

model.pPart.edit groups phrase-level elements for simple editorial correction and transcription. [3.4. Simple Editorial Changes]	
Module	tei
Used by	model.phrase
Members	model.pPart.editorial [subst] model.pPart.transcriptional [add del supplied]

9.2.29. *model.pPart.editorial*

model.pPart.editorial groups phrase-level elements for simple editorial interventions that may be useful both in transcribing and in authoring. [3.4. Simple Editorial Changes]	
Module	tei
Used by	model.limitedPhrase model.pPart.edit
Members	subst

9.2.30. *model.pPart.transcriptional*

model.pPart.transcriptional groups phrase-level elements used for editorial transcription of pre-existing source materials. [3.4. Simple Editorial Changes]	
Module	tei
Used by	model.pPart.edit
Members	add del supplied

9.2.31. *model.personLike*

model.personLike groups elements which provide information about people and their relationships.	
Module	tei
Used by	org particDesc
Members	org person

9.2.32. *model.personPart*

model.personPart groups elements which form part of the description of a person. [15.2.2. The Participant Description]	
Module	tei
Used by	person
Members	model.biblLike model.eventLike model.persStateLike idno name

9.2.33. *model.phrase*

model.phrase groups elements which can occur at the level of individual words or phrases. [1.3. The TEI Class System]	
Module	tei
Used by	date dateline macro.paraContent macro.phraseSeq macro.specialPara opener
Members	model.graphicLike [graphic] model.highlighted [model.emphLike [title] model.hiLike [hi]] model.lPart model.pPart.data [model.addressLike model.dateLike [date] model.measureLike model.nameLike [model.nameLike.agent [name] model.offsetLike model.persNamePart model.placeStateLike [model.placeNamePart] idno rs]] model.pPart.edit [model.pPart.editorial [subst] model.pPart.transcriptional [add del supplied]] model.pPart.msdesc model.phrase.xml model.ptrLike [ref] model.segLike model.specDescLike
Note	This class of elements can occur within paragraphs, list items, lines of verse, etc.

9.2.34. *model.placeStateLike*

model.placeStateLike groups elements which describe changing states of a place.	
Module	tei
Used by	model.nameLike
Members	model.placeNamePart

9.2.35. *model.profileDescPart*

model.profileDescPart groups elements which may be used inside <profileDesc> and appear multiple times.	
Module	tei
Used by	profileDesc
Members	correspDesc creation handNotes particDesc textClass

9.2.36. *model.ptrLike*

model.ptrLike groups elements used for purposes of location and reference. [3.6. Simple Links and Cross-References]	
Module	tei
Used by	model.limitedPhrase model.phrase model.publicationStmtPart.detail
Members	ref

9.2.37. *model.publicationStmtPart.agency*

model.publicationStmtPart.agency groups the child elements of a <publicationStmt> element of the TEI header that indicate an authorising agent. [2.2.4. Publication, Distribution, Licensing, etc.]	
Module	tei
Used by	publicationStmt
Members	publisher

Note	The ‘agency’ child elements, while not required, are required if one of the ‘detail’ child elements is to be used. It is not valid to have a ‘detail’ child element without a preceding ‘agency’ child element. See also model.publicationStmtPart.detail .
-------------	--

9.2.38. *model.publicationStmtPart.detail*

model.publicationStmtPart.detail groups the agency-specific child elements of the <publicationStmt> element of the TEI header. [2.2.4. Publication, Distribution, Licensing, etc.]	
Module	tei
Used by	publicationStmt
Members	model.ptrLike[ref] availability date idno
Note	A ‘detail’ child element may not occur unless an ‘agency’ child element precedes it. See also model.publicationStmtPart.agency .

9.2.39. *model.qLike*

model.qLike groups elements related to highlighting which can appear either within or between chunk-level elements. [3.3. Highlighting and Quotation]	
Module	tei
Used by	model.inter
Members	model.quoteLike[quote] q

9.2.40. *model.quoteLike*

model.quoteLike groups elements used to directly contain quotations.	
Module	tei
Used by	model.qLike
Members	quote

9.2.41. *model.resourceLike*

model.resourceLike groups separate elements which constitute the content of a digital resource, as opposed to its metadata. [1.3. The TEI Class System]	
Module	tei
Used by	TEI
Members	facsimile text

9.2.42. *model.respLike*

model.respLike groups elements which are used to indicate intellectual or other significant responsibility, for example within a bibliographic element.	
Module	tei
Used by	titleStmt
Members	author editor respStmt

9.2.43. *model.teiHeaderPart*

model.teiHeaderPart groups high level elements which may appear more than once in a TEI header.	
Module	tei
Used by	teiHeader
Members	profileDesc

9.3. Attribute classes

9.3.1. *att.ascribed*

att.ascribed provides attributes for elements representing speech or action that can be ascribed to a specific individual. [3.3.3. Quotation 8.3. Elements Unique to Spoken Texts]	
---	--

Module	tei
Members	<u>q</u>
Attributes	<p>Attributes</p> <p>who indicates the person, or group of people, to whom the element content is ascribed.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by whitespace</p> <p>In the following example from Hamlet, speeches (<sp>) in the body of the play are linked to <castItem> elements in the <castList> using the <i>who</i> attribute.</p> <pre><castItem type="role"> <role xml:id="Barnardo">Barnardo</role> </castItem> <castItem type="role"> <role xml:id="Francisco">Francisco</role> <roleDesc>a soldier</roleDesc> </castItem> <!-- ... --> <sp who="#Barnardo"> <speaker>Barnardo</speaker> <l n="1">Who's there?</l> </sp> <sp who="#Francisco"> <speaker>Francisco</speaker> <l n="2">Nay, answer me: stand, and unfold yourself.</l> </sp></pre> <p>Note For transcribed speech, this will typically identify a participant or participant group; in other contexts, it will point to any identified <u><person></u> element.</p>

9.3.2. att.breaking

att.breaking provides an attribute to indicate whether or not the element concerned is considered to mark the end of an orthographic token in the same way as whitespace. [3.10.3. Milestone Elements]	
Module	tei
Members	<u>lb</u> <u>pb</u>
Attributes	<p>Attributes</p> <p>break indicates whether or not the element bearing this attribute should be considered to mark the end of an orthographic token in the same way as whitespace.</p> <p>Status Recommended</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Sample values include</p> <p>yes the element bearing this attribute is considered to mark the end of any adjacent orthographic token irrespective of the presence of any adjacent whitespace</p> <p>no the element bearing this attribute is considered not to mark the end of any adjacent orthographic token irrespective of the presence of any adjacent whitespace</p> <p>maybe the encoding does not take any position on this issue.</p> <p>In the following lines from the 'Dream of the Rood', linebreaks occur in the middle of the words <i>l#ðost</i> and <i>reord-berendum</i>.</p> <pre><ab> ...e#esa tome iu ic#æs #e#orden #ita heardo#t . leodum la<lb break="no"/> ðost ærþan ichim lifes</pre>

```
#e# rihtne #erymde reord be<lb break="no"/>
rendum h#æt me þa#e#eorðode #uldres ealdor ofer...
</ab>
```

9.3.3. att.cReferencing

att.cReferencing provides an attribute which may be used to supply a *canonical reference* as a means of identifying the target of a pointer.

Module	tei
Members	<u>ref</u>
Attributes	<p>Attributes</p> <p>cRef (canonical reference) specifies the destination of the pointer by supplying a canonical reference expressed using the scheme defined in a <code><refsDecl></code> element in the TEI header</p> <p>Status Optional</p> <p>Datatype <u>teidata.text</u></p> <p>Note The value of <i>cRef</i> should be constructed so that when the algorithm for the resolution of canonical references (described in section 16.2.5. Canonical References) is applied to it the result is a valid URI reference to the intended target The <code><refsDecl></code> to use may be indicated with the <i>decls</i> attribute. Currently these Guidelines only provide for a single canonical reference to be encoded on any given <code><ptr></code> element.</p>

9.3.4. att.canonical

att.canonical provides attributes which can be used to associate a representation such as a name or title with canonical information about the object being named or referenced. [13.1.1. Linking Names and Their Referents]

Module	tei
Members	<u>att.naming</u> [<u>att.personal</u> <u>rs</u>] <u>correspDesc</u>
Attributes	<p>Attributes</p> <p>key provides an externally-defined means of identifying the entity (or entities) being named, using a coded value of some kind.</p> <p>Status Optional</p> <p>Datatype <u>teidata.text</u></p> <pre><author> <name key="name 427308" type="organisation">[New Zealand Parliament, Legislative Council]</name> </author> <author> <name key="Hugo, Victor (1802-1885)" ref="http://www.idref.fr/026927608">Victor Hugo</name> </author></pre> <p>Note The value may be a unique identifier from a database, or any other externally-defined string identifying the referent. No particular syntax is proposed for the values of the <i>key</i> attribute, since its form will depend entirely on practice within a given project. For the same reason, this attribute is not recommended in data interchange, since there is no way of ensuring that the values used by one project are distinct from those used by another. In such a situation, a preferable approach for magic tokens which follows standard practice on the Web is to use a <i>ref</i> attribute whose value is a tag URI as defined in RFC 4151.</p> <p>ref (reference) provides an explicit means of locating a full definition or identity for the entity being named by means of one or more URIs.</p> <p>Status Optional</p>

	<p>Datatype 1-# occurrences of <code>teidata.pointer</code> separated by whitespace</p> <pre><name ref="http://viaf.org/viaf/109557338" type="person">Seamus Heaney</name></pre> <p>Note The value must point directly to one or more XML elements or other resources by means of one or more URIs, separated by whitespace. If more than one is supplied the implication is that the name identifies several distinct entities.</p>
--	--

9.3.5. *att.dateable.custom*

att.dateable.custom provides attributes for normalization of elements that contain dateable events to a custom dating system (i.e. other than the Gregorian used by W3 and ISO). [13.3.6. Dates and Times]

Module	namesdates
Members	att.dateable
Attributes	<p>Attributes</p> <p>when-custom supplies the value of a date or time in some custom standard form. Status Optional Datatype 1-# occurrences of <code>teidata.word</code> separated by whitespace</p> <p>The following are examples of custom date or time formats that are <i>not</i> valid ISO or W3C format normalizations, normalized to a different dating system</p> <pre><p>Alhazen died in Cairo on the <date when="1040-03-06" when-custom="431-06-12"> 12th day of Jumada t-Tania, 430 AH </date>.</p> <p>The current world will end at the <date when="2012-12-21" when-custom="13.0.0.0.0">end of B'ak'tun 13</date>.</p> <p>The Battle of Meggidu (<date when-custom="Thutmose_III:23">23rd year of reign of Thutmose III</date>).</p> <p>Esidorus bixit in pace annos LXX plus minus sub <date when-custom="Ind:4-10-11">die XI mensis Octobris indictione IIII</date> </p></pre> <p>Not all custom date formulations will have Gregorian equivalents. The <i>when-custom</i> attribute and other custom dating are not constrained to a datatype by the TEI, but individual projects are recommended to regularize and document their dating formats.</p> <p>notBefore-custom specifies the earliest possible date for the event in some custom standard form. Status Optional Datatype 1-# occurrences of <code>teidata.word</code> separated by whitespace</p> <p>notAfter-custom specifies the latest possible date for the event in some custom standard form. Status Optional Datatype 1-# occurrences of <code>teidata.word</code> separated by whitespace</p> <p>from-custom indicates the starting point of the period in some custom standard form. Status Optional Datatype 1-# occurrences of <code>teidata.word</code> separated by whitespace</p> <pre><event xml:id="FIRE1" datingMethod="#julian" from-custom="1666-09-02" to-custom="1666-09-05"> <head>The Great Fire of London</head> <p>The Great Fire of London burned through a large part of the city of London.</p> </event></pre> <p>to-custom indicates the ending point of the period in some custom standard form. Status Optional</p>

		<p>Datatype 1-# occurrences of <code>teidata.word</code> separated by whitespace</p> <p>datingPoint supplies a pointer to some location defining a named point in time with reference to which the datable item is understood to have occurred</p> <p>Status Optional</p> <p>Datatype <code>teidata.pointer</code></p> <p>datingMethod supplies a pointer to a <code><calendar></code> element or other means of interpreting the values of the custom dating attributes.</p> <p>Status Optional</p> <p>Datatype <code>teidata.pointer</code></p> <pre> Contayning the Originall, Antiquity, Increa#e, Moderne e#tate, and de#cription of that Citie, written in the yeare <date when-custom="1598" calendar="#julian" datingMethod="#julian">1598</date>. by Iohn Stow Citizen of London. </pre> <p>In this example, the <i>calendar</i> attribute points to a <code><calendar></code> element for the Julian calendar, specifying that the text content of the <code><date></code> element is a Julian date, and the <i>datingMethod</i> attribute also points to the Julian calendar to indicate that the content of the <i>when-custom</i> attribute value is Julian too.</p> <pre> <date when="1382-06-28" when-custom="6890-06-20" datingMethod="#creationOfWorld"> u### ##### ### <num>#</num> ##### <num>###</num> </date> </pre> <p>In this example, a date is given in a Mediaeval text measured "from the creation of the world", which is normalised (in <i>when</i>) to the Gregorian date, but is also normalized (in <i>when-custom</i>) to a machine-actionable, numeric version of the date from the Creation.</p> <p>Note Note that the <i>datingMethod</i> attribute (unlike <i>calendar</i> defined in <code>att.datable</code>) defines the calendar or dating system to which the date described by the parent element is normalized (i.e. in the <i>when-custom</i> or other <i>X-custom</i> attributes), <i>not</i> the calendar of the original date in the element.</p>
--	--	---

9.3.6. *att.datable.iso*

att.datable.iso provides attributes for normalization of elements that contain datable events using the ISO 8601 standard. [3.5.4. Dates and Times 13.3.6. Dates and Times]

Module	namesdates
Members	att.datable
Attributes	<p>Attributes</p> <p>when-iso supplies the value of a date or time in a standard form.</p> <p>Status Optional</p> <p>Datatype <code>teidata.temporal.iso</code></p> <p>The following are examples of ISO date, time, and date & time formats that are <i>not</i> valid W3C format normalizations.</p> <pre> <date when-iso="1996-09-24T07:25+00">Sept. 24th, 1996 at 3:25 in the morning</date> <date when-iso="1996-09-24T03:25-04">Sept. 24th, 1996 at 3:25 in the morning</date> <time when-iso="1999-01-04T20:42-05">4 Jan 1999 at 8:42 pm</time> <time when-iso="1999-W01-1T20,70-05">4 Jan 1999 at 8:42 pm</time> <date when-iso="2006-05-18T10:03">a few minutes after ten in the morning on Thu 18 May</date> <time when-iso="03:00">3 A.M.</time> <time when-iso="14">around two</time> <time when-iso="15,5">half past three</time> </pre> <p>All of the examples of the <i>when</i> attribute in the <code>att.datable.w3c</code> class are also valid with respect to this attribute.</p> <pre> He likes to be punctual. I said <q> <time when-iso="12">around noon</time> </q>, and he showed up at <time when-iso="12:00:00">12 O'clock</time> on the dot. </pre>

	<p>The second occurrence of <code><time></code> could have been encoded with the <i>when</i> attribute, as 12:00:00 is a valid time with respect to the W3C <i>XML Schema Part 2: Datatypes Second Edition</i> specification. The first occurrence could not.</p> <p>notBefore-iso specifies the earliest possible date for the event in standard form, e.g. yyyy-mm-dd. Status Optional Datatype teidata.temporal.iso</p> <p>notAfter-iso specifies the latest possible date for the event in standard form, e.g. yyyy-mm-dd. Status Optional Datatype teidata.temporal.iso</p> <p>from-iso indicates the starting point of the period in standard form. Status Optional Datatype teidata.temporal.iso</p> <p>to-iso indicates the ending point of the period in standard form. Status Optional Datatype teidata.temporal.iso</p>
Note	The value of these attributes should be a normalized representation of the date, time, or combined date & time intended, in any of the standard formats specified by ISO 8601, using the Gregorian calendar.
Note	<p>If both <i>when-iso</i> and <i>dur-iso</i> are specified, the values should be interpreted as indicating a span of time by its starting time (or date) and duration. That is,</p> <pre><date when-iso="2007-06-01" dur-iso="P8D"/></pre> <p>indicates the same time period as</p> <pre><date when-iso="2007-06-01/P8D"/></pre> <p>In providing a 'regularized' form, no claim is made that the form in the source text is incorrect; the regularized form is simply that chosen as the main form for purposes of unifying variant forms under a single heading.</p>

9.3.7. att.dataable.w3c

att.dataable.w3c provides attributes for normalization of elements that contain datable events conforming to the W3C <i>XML Schema Part 2: Datatypes Second Edition</i> . [3.5.4. Dates and Times 13.3.6. Dates and Times]	
Module	tei
Members	att.dataable
Attributes	<p>Attributes</p> <p>when supplies the value of the date or time in a standard form, e.g. yyyy-mm-dd. Status Optional Datatype teidata.temporal.w3c</p> <p>Examples of W3C date, time, and date & time formats.</p> <pre><p> <date when="1945-10-24">24 Oct 45</date> <date when="1996-09-24T07:25:00Z">September 24th, 1996 at 3:25 in the morning</date> <time when="1999-01-04T20:42:00-05:00">Jan 4 1999 at 8 pm</time> <time when="14:12:38">fourteen twelve and 38 seconds</time> <date when="1962-10">October of 1962</date> <date when="--06-12">June 12th</date> <date when="---01">the first of the month</date> <date when="--08">August</date> <date when="2006">MMVI</date> <date when="0056">AD 56</date> <date when="-0056">56 BC</date> </p></pre> <p>This list begins in the year 1632, more precisely on Trinity Sunday, i.e. the Sunday after Pentecost, in that year the</p>

	<pre> <date calendar="#julian" when="1632-06-06">27th of May (old style)</date>. <opener> <dateline> <placeName>Dorchester, Village,</placeName> <date when="1828-03-02">March 2d. 1828.</date> </dateline> <salute>To Mrs. Cornell,</salute> Sunday <time when="12:00:00">noon.</time> </opener> </pre>
	<p>notBefore specifies the earliest possible date for the event in standard form, e.g. yyyy-mm-dd.</p> <p>Status Optional</p> <p>Datatype teidata.temporal.w3c</p> <p>notAfter specifies the latest possible date for the event in standard form, e.g. yyyy-mm-dd.</p> <p>Status Optional</p> <p>Datatype teidata.temporal.w3c</p> <p>from indicates the starting point of the period in standard form, e.g. yyyy-mm-dd.</p> <p>Status Optional</p> <p>Datatype teidata.temporal.w3c</p> <p>to indicates the ending point of the period in standard form, e.g. yyyy-mm-dd.</p> <p>Status Optional</p> <p>Datatype teidata.temporal.w3c</p>
Schematron	<pre> <sch:rule context="tei:*[@when]"> <sch:report test="@notBefore @notAfter @from @to" role="nonfatal">The @when attribute cannot be used with any other att.dataable.w3c attributes.</sch:report> </sch:rule> </pre>
Schematron	<pre> <sch:rule context="tei:*[@from]"> <sch:report test="@notBefore" role="nonfatal">The @from and @notBefore attributes cannot be used together.</sch:report> </sch:rule> </pre>
Schematron	<pre> <sch:rule context="tei:*[@to]"> <sch:report test="@notAfter" role="nonfatal">The @to and @notAfter attributes cannot be used together.</sch:report> </sch:rule> </pre>
Example	<pre> <date from="1863-05-28" to="1863-06-01">28 May through 1 June 1863</date> </pre>
Note	<p>The value of these attributes should be a normalized representation of the date, time, or combined date & time intended, in any of the standard formats specified by <i>XML Schema Part 2: Datatypes Second Edition</i>, using the Gregorian calendar.</p> <p>The most commonly-encountered format for the date portion of a temporal attribute is yyyy-mm-dd, but yyyy, --mm, --dd, yyyy-mm, or --mm-dd may also be used. For the time part, the form hh:mm:ss is used.</p> <p>Note that this format does not currently permit use of the value 0000 to represent the year 1 BCE; instead the value -0001 should be used.</p>

9.3.8. att.declarable

att.declarable provides attributes for those elements in the TEI header which may be independently selected by means of the special purpose <i>decls</i> attribute. [15.3. Associating Contextual Information with a Text]	
Module	tei
Members	correspDesc particDesc
Attributes	<p>Attributes</p> <p>default indicates whether or not this element is selected by default when its parent is selected.</p> <p>Status Optional</p> <p>Datatype teidata.truthValue</p>

	<p>Legal values true are: This element is selected if its parent is selected</p> <p>false This element can only be selected explicitly, unless it is the only one of its kind, in which case it is selected if its parent is selected.[Default]</p>
Note	The rules governing the association of declarable elements with individual parts of a TEI text are fully defined in chapter 15.3. Associating Contextual Information with a Text. Only one element of a particular type may have a <i>default</i> attribute with a value of true.

9.3.9. att.declaring

att.declaring provides attributes for elements which may be independently associated with a particular declarable element within the header, thus overriding the inherited default for that element. [15.3. Associating Contextual Information with a Text]	
Module	tei
Members	<u>div</u> <u>p</u> <u>ref</u>
Attributes	<p>Attributes</p> <p>decls identifies one or more <i>declarable elements</i> within the header, which are understood to apply to the element bearing this attribute and its content.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by whitespace</p>
Note	The rules governing the association of declarable elements with individual parts of a TEI text are fully defined in chapter 15.3. Associating Contextual Information with a Text.

9.3.10. att.dimensions

att.dimensions provides attributes for describing the size of physical objects.	
Module	tei
Members	<u>att.editLike</u> [<u>att.transcriptional</u> [<u>add</u> <u>del</u> <u>subst</u>] <u>gap</u> <u>org</u> <u>person</u> <u>supplied</u>]
Attributes	<p>Attributes <u>att.ranging</u> (@atLeast, @atMost, @min, @max, @confidence)</p> <p>unit names the unit used for the measurement</p> <p>Status Optional</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Suggested values cm (centimetres)</p> <p>include: mm (millimetres)</p> <p>in (inches)</p> <p>lines lines of text</p> <p>chars (characters) characters of text</p> <p>quantity specifies the length in the units specified</p> <p>Status Optional</p> <p>Datatype <u>teidata.numeric</u></p> <p>extent indicates the size of the object concerned using a project-specific vocabulary combining quantity and units in a single string of words.</p> <p>Status Optional</p> <p>Datatype <u>teidata.text</u></p>

		<pre><gap extent="5 words" /></pre> <pre><height extent="half the page" /></pre>
	precision	<p>characterizes the precision of the values specified by the other attributes.</p> <p>Status Optional</p> <p>Datatype teidata.certainty</p>
	scope	<p>where the measurement summarizes more than one observation, specifies the applicability of this measurement.</p> <p>Status Optional</p> <p>Datatype teidata.enumerated</p> <p>Sample values all measurement applies to all instances.</p> <p>include: most measurement applies to most of the instances inspected.</p> <p>range measurement applies to only the specified range of instances.</p>

9.3.11. att.divLike

att.divLike provides attributes common to all elements which behave in the same way as divisions. [4. Default Text Structure]	
Module	tei
Members	div
Attributes	<p>Attributes att.fragmentable (@part)</p> <p>org (organization) specifies how the content of the division is organized.</p> <p>Status Optional</p> <p>Datatype teidata.enumerated</p> <p>Legal values composite are: no claim is made about the sequence in which the immediate contents of this division are to be processed, or their inter-relationships.</p> <p>uniform the immediate contents of this element are regarded as forming a logical unit, to be processed in sequence.[Default]</p> <p>sample indicates whether this division is a sample of the original source and if so, from which part.</p> <p>Status Optional</p> <p>Datatype teidata.enumerated</p> <p>Legal values initial are: division lacks material present at end in source.</p> <p>medial division lacks material at start and end.</p> <p>final division lacks material at start.</p> <p>unknown position of sampled material within original unknown.</p> <p>complete division is not a sample.[Default]</p>

9.3.12. *att.editLike*

att.editLike provides attributes describing the nature of an encoded scholarly intervention or interpretation of any kind. [3.4. Simple Editorial Changes 10.3.1. Origination 13.3.2. The Person Element 11.3.1.1. Core Elements for Transcriptional Work]	
Module	tei
Members	att.transcriptional [add del subst] gap org person supplied
Attributes	<p>Attributes att.dimensions (@unit, @quantity, @extent, @precision, @scope) (att.ranging (@atLeast, @atMost, @min, @max, @confidence))</p> <p>evidence indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of teidata.enumerated separated by whitespace</p> <p>Suggested values include:</p> <p>internal there is internal evidence to support the intervention.</p> <p>external there is external evidence to support the intervention.</p> <p>conjecture the intervention or interpretation has been made by the editor, cataloguer, or scholar on the basis of their expertise.</p> <p>instant indicates whether this is an instant revision or not.</p> <p>Status Optional</p> <p>Datatype teidata.xTruthValue</p> <p>Default false</p>
Note	The members of this attribute class are typically used to represent any kind of editorial intervention in a text, for example a correction or interpretation, or to date or localize manuscripts etc.
Note	Each pointer on the <i>source</i> (if present) corresponding to a witness or witness group should reference a bibliographic citation such as a <witness> , <msDesc> , or <bibl> element, or another external bibliographic citation, documenting the source concerned.

9.3.13. *att.edition*

att.edition provides attributes identifying the source edition from which some encoded feature derives.	
Module	tei
Members	lb
Attributes	<p>Attributes</p> <p>ed (edition) supplies a sigil or other arbitrary identifier for the source edition in which the associated feature (for example, a page, column, or line break) occurs at this point in the text.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of teidata.word separated by whitespace</p> <p>edRef (edition reference) provides a pointer to the source edition in which the associated feature (for example, a page, column, or line break) occurs at this point in the text.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of teidata.pointer separated by whitespace</p>

Example	<pre> <l>Of Mans First Disobedience,<lb ed="1674"/> and<lb ed="1667"/> the Fruit</l> <l>Of that Forbidden Tree, whose<lb ed="1667 1674"/> mortal tast</l> <l>Brought Death into the World,<lb ed="1667"/> and all<lb ed="1674"/> our woe,</l> </pre>
Example	<pre> <listBibl> <bibl xml:id="stapledon1937"> <author>Olaf Stapledon</author>, <title>Starmaker</title>, <publisher>Methuen</publisher>, <date>1937</date> </bibl> <bibl xml:id="stapledon1968"> <author>Olaf Stapledon</author>, <title>Starmaker</title>, <publisher>Dover</publisher>, <date>1968</date> </bibl> </listBibl> <!-- ... --> <p>Looking into the future aeons from the supreme moment of the cosmos, I saw the populations still with all their strength maintaining the<pb n="411" edRef="#stapledon1968"/>essentials of their ancient culture, still living their personal lives in zest and endless novelty of action, ... I saw myself still preserving, though with increasing difficulty, my lucid con-<pb n="291" edRef="#stapledon1937"/>sciousness;</p> </pre>

9.3.14. att.fragmentable

att.fragmentable provides an attribute for representing fragmentation of a structural element, typically as a consequence of some overlapping hierarchy.

Module	tei
Members	att.divLike [div] p
Attributes	<p>Attributes</p> <p>part specifies whether or not its parent element is fragmented in some way, typically by some other overlapping structure: for example a speech which is divided between two or more verse stanzas, a paragraph which is split across a page division, a verse line which is divided between two speakers.</p> <p>Status Optional</p> <p>Datatype teidata.enumerated</p> <p>Legal values Y</p> <p>are: (yes) the element is fragmented in some (unspecified) respect</p> <p>N (no) the element is not fragmented, or no claim is made as to its completeness[Default]</p> <p>I (initial) this is the initial part of a fragmented element</p> <p>M (medial) this is a medial part of a fragmented element</p> <p>F (final) this is the final part of a fragmented element</p> <p>Note The values I, M, or F should be used only where it is clear how the element may be reconstituted.</p>

9.3.15. att.global

att.global provides attributes common to all elements in the TEI encoding scheme. [1.3.1.1. Global Attributes]

Module	tei
Members	add cell correspAction correspDesc del div gap handNote handNotes hi lb note org p particDesc person q quote ref row rs subst supplied table

Attributes	Attributes att.global.rendition (@rend, @style, @rendition) att.global.facs (@facs) att.global.change (@change) att.global.responsibility (@cert, @resp) att.global.source (@source)
xml:id	(identifier) provides a unique identifier for the element bearing the attribute. Status Optional Datatype ID Note The <i>xml:id</i> attribute may be used to specify a canonical reference for an element; see section 3.10. Reference Systems.
n	(number) gives a number (or other label) for an element, which is not necessarily unique within the document. Status Optional Datatype teidata.text Note The value of this attribute is always understood to be a single token, even if it contains space or other punctuation characters, and need not be composed of numbers only. It is typically used to specify the numbering of chapters, sections, list items, etc.; it may also be used in the specification of a standard reference system for the text.
xml:lang	(language) indicates the language of the element content using a ‘tag’ generated according to BCP 47. Status Optional Datatype teidata.language <div data-bbox="719 1048 1385 1144" data-label="Text"> <pre><p> ... The consequences of this rapid depopulation were the loss of the last <foreign xml:lang="rap">ariki</foreign> or chief (Routledge 1920:205,210) and their connections to ancestral territorial organization.</p></pre> </div> Note The <i>xml:lang</i> value will be inherited from the immediately enclosing element, or from its parent, and so on up the document hierarchy. It is generally good practice to specify <i>xml:lang</i> at the highest appropriate level, noticing that a different default may be needed for the <i>teiHeader</i> from that needed for the associated resource element or elements, and that a single TEI document may contain texts in many languages. The authoritative list of registered language subtags is maintained by IANA and is available at http://www.iana.org/assignments/language-subtag-registry . For a good general overview of the construction of language tags, see http://www.w3.org/International/articles/language-tags/ , and for a practical step-by-step guide, see https://www.w3.org/International/questions/qa-choosing-language-tags.en.php . The value used must conform with BCP 47. If the value is a private use code (i.e., starts with x- or contains -x-), a <code><language></code> element with a matching value for its <i>ident</i> attribute should be supplied in the TEI header to document this value. Such documentation may also optionally be supplied for non-private-use codes, though these must remain consistent with their IETF/Internet Engineering Task Force definitions.
xml:base	provides a base URI reference with which applications can resolve relative URI references into absolute URI references. Status Optional Datatype teidata.pointer <div data-bbox="719 1883 1385 1980" data-label="Text"> <pre><div type="bibl"> <head>Bibliography</head> <listBibl xml:base="http://www.lib.ucdavis.edu/BWRP/Works/"> <bibl> <author></pre> </div>

	<pre> <name>London, Letitia Elizabeth</name> </author> <ref target="LandLVowOf.sgm"> <title>The Vow of the Peacock</title> </ref> </bibl> <bibl> <author> <name>Compton, Margaret Clephane</name> </author> <ref target="NortMIrene.sgm"> <title>Irene, a Poem in Six Cantos</title> </ref> </bibl> <bibl> <author> <name>Taylor, Jane</name> </author> <ref target="TaylJEssay.sgm"> <title>Essays in Rhyme on Morals and Manners</title> </ref> </bibl> </listBibl> </div> </pre> <p>xml:space signals an intention about how white space should be managed by applications.</p> <p>Status Optional</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Legal values default</p> <p>are: signals that the application's default white-space processing modes are acceptable</p> <p>preserve indicates the intent that applications preserve all white space</p> <p>Note The XML specification provides further guidance on the use of this attribute. Note that many parsers may not handle xml:space correctly.</p>
--	---

9.3.16. att.global.change

att.global.change supplies the <i>change</i> attribute, allowing its member elements to specify one or more states or revision campaigns with which they are associated.	
Module	transcr
Members	att.global [add cell correspAction correspDesc del div gap handNote handNotes hi lb note org p particDesc person q quote ref row rs subst supplied table]
Attributes	<p>Attributes</p> <p>change points to one or more <code><change></code> elements documenting a state or revision campaign to which the element bearing this attribute and its children have been assigned by the encoder.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by whitespace</p>

9.3.17. att.global.facs

att.global.facs provides an attribute used to express correspondence between an element containing transcribed text and all or part of an image representing that text. [11.1. Digital Facsimiles]	
Module	transcr
Members	att.global [add cell correspAction correspDesc del div gap handNote handNotes hi lb note org p particDesc person q quote ref row rs subst supplied table]
Attributes	<p>Attributes</p> <p>facs (facsimile) points to all or part of an image which corresponds with the content of the element.</p>

	Status	Optional
	Datatype	1-# occurrences of <u>teidata.pointer</u> separated by whitespace

9.3.18. *att.global.rendition*

att.global.rendition provides rendering attributes common to all elements in the TEI encoding scheme. [1.3.1.1.3. Rendition Indicators]	
Module	tei
Members	<u>att.global</u> [<u>add cell correspAction correspDesc del div gap handNote handNotes hi lb note org p particDesc person q quote ref row rs subst supplied table</u>]
Attributes	<p>Attributes</p> <p>rend</p> <p>(rendition) indicates how the element in question was rendered or presented in the source text.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.word</u> separated by whitespace</p> <pre><head rend="align(center) case(allcaps)"> <lb/>To The <lb/>Duchesse <lb/>of <lb/>Newcastle, <lb/>On Her <lb/> <hi rend="case(mixed)">New Blazing-World</hi>. </head></pre> <p>Note These Guidelines make no binding recommendations for the values of the <i>rend</i> attribute; the characteristics of visual presentation vary too much from text to text and the decision to record or ignore individual characteristics varies too much from project to project. Some potentially useful conventions are noted from time to time at appropriate points in the Guidelines. The values of the <i>rend</i> attribute are a set of sequence-indeterminate individual tokens separated by whitespace.</p> <p>style</p> <p>contains an expression in some formal style definition language which defines the rendering or presentation used for this element in the source text</p> <p>Status Optional</p> <p>Datatype <u>teidata.text</u></p> <pre><head style="text-align: center; font-variant: small-caps"> <lb/>To The <lb/>Duchesse <lb/>of <lb/>Newcastle, <lb/>On Her <lb/> <hi style="font-variant: normal">New Blazing-World</hi>. </head></pre> <p>Note Unlike the attribute values of <i>rend</i>, which uses whitespace as a separator, the <i>style</i> attribute may contain stylistic information concerning the source, not any particular output.</p> <p>The formal language in which values for this attribute are expressed may be specified using the <code><styleDefDecl></code> element in the TEI header.</p> <p>If <i>style</i> and <i>rendition</i> are both present on an element, then <i>style</i> overrides or complements <i>rendition</i>. <i>style</i> should not be used in conjunction with <i>rend</i>, because the latter does not employ a formal style definition language.</p> <p>rendition</p> <p>points to a description of the rendering or presentation used for this element in the source text.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by whitespace</p> <pre><head rendition="#ac #sc"> <lb/>To The <lb/>Duchesse <lb/>of <lb/>Newcastle, <lb/>On Her <lb/> <hi rendition="#normal">New Blazing-World</hi>. </head></pre>

	<pre> <!-- elsewhere... --> <rendition xml:id="sc" scheme="css">font-variant: small-caps</rendition> <rendition xml:id="normal" scheme="css">font-variant: normal</rendition> <rendition xml:id="ac" scheme="css">text-align: center</rendition> </pre>
Note	<p>The <i>rendition</i> attribute is used in a very similar way to the <i>class</i> attribute defined for XHTML but with the important distinction that its function is to describe the appearance of the source text, not necessarily to determine how that text should be presented on screen or paper.</p> <p>If <i>rendition</i> is used to refer to a style definition in a formal language like CSS, it is recommended that it not be used in conjunction with <i>rend</i>. Where both <i>rendition</i> and <i>rend</i> are supplied, the latter is understood to override or complement the former.</p> <p>Each URI provided should indicate a <code><rendition></code> element defining the intended rendition in terms of some appropriate style language, as indicated by the <i>scheme</i> attribute.</p>

9.3.19. att.global.responsibility

att.global.responsibility provides attributes indicating the agent responsible for some aspect of the text, the markup or something asserted by the markup, and the degree of certainty associated with it. [1.3.1.1.4. Sources, certainty, and responsibility 3.4. Simple Editorial Changes 11.3.2.2. Hand, Responsibility, and Certainty Attributes 17.3. Spans and Interpretations 13.1.1. Linking Names and Their Referents]	
Module	tei
Members	att.global [add cell correspAction correspDesc del div gap handNote handNotes hi lb note org p particDesc person q quote ref row rs subst supplied table]
Attributes	<p>Attributes</p> <p>cert (certainty) signifies the degree of certainty associated with the intervention or interpretation.</p> <p>Status Optional</p> <p>Datatype teidata.probCert</p> <p>resp (responsible party) indicates the agency responsible for the intervention or interpretation, for example an editor or transcriber.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of teidata.pointer separated by whitespace</p> <p>Note To reduce the ambiguity of a <i>resp</i> pointing directly to a person or organization, we recommend that <i>resp</i> be used to point not to an agent (<code><person></code> or <code><org></code>) but to a <code><respStm></code>, <code><author></code>, <code><editor></code> or similar element which clarifies the exact role played by the agent. Pointing to multiple <code><respStm></code>s allows the encoder to specify clearly each of the roles played in part of a TEI file (creating, transcribing, encoding, editing, proofing etc.).</p>
Example	<pre> Blessed are the <choice> <sic>cheesemakers</sic> <corr resp="#editor" cert="high">peacemakers</corr> </choice>: for they shall be called the children of God. </pre>
Example	<pre> <!-- in the <text> ... --><lg> <!-- ... --> <l>Punkes, Panders, ba#e extortionizing sla<choice> <sic>n</sic> <corr resp="#JENS1_transcriber">u</corr> </choice>es,</l> <!-- ... --> </lg> <!-- in the <teiHeader> ... --> <!-- ... --> </pre>

	<pre> <respStmt xml:id="JENSI_transcriber"> <resp when="2014">Transcriber</resp> <name>Janelle Jenstad</name> </respStmt> </pre>
--	--

9.3.20. att.global.source

att.global.source provides an attribute used by elements to point to an external source. [1.3.1.1.4. Sources, certainty, and responsibility 3.3.3. Quotation 8.3.4. Writing]	
Module	tei
Members	att.global [add cell correspAction correspDesc del div gap handNote handNotes hi lb note org p particDesc person q quote ref row rs subst supplied table]
Attributes	<p>Attributes</p> <p>source specifies the source from which some aspect of this element is drawn.</p> <p>Status Optional</p> <p>Datatype 1–# occurrences of teidata.pointer separated by whitespace</p> <p>Note The <i>source</i> attribute points to an external source. When used on elements describing schema components such as <code><schemaSpec></code> or <code><moduleRef></code> it identifies the source from which declarations for the components of the object being defined may be obtained.</p> <p>On other elements it provides a pointer to the bibliographical source from which a quotation or citation is drawn.</p> <p>In either case, the location may be provided using any form of URI, for example an absolute URI, a relative URI, or private scheme URI that is expanded to an absolute URI as documented in a <code><prefixDef></code>.</p> <p>If more than one location is specified, the default assumption is that the required source should be obtained by combining the resources indicated.</p>
Example	<pre> <p> <!-- ... --> As Willard McCarty (<bibl xml:id="mcc_2012">2012, p.2</bibl>) tells us, <quote source="#mcc_2012"> term.</quote> <!-- ... --> </p> </pre>
Example	<pre> <p> <!-- ... --> <quote source="#chicago_15_ed">Grammatical theories are in flux, and the more we learn, the less we seem to know.</quote> <!-- ... --> </p> <!-- ... --> <bibl xml:id="chicago_15_ed"> <title level="m">The Chicago Manual of Style</title>, <edition>15th edition</edition>. <pubPlace>Chicago</pubPlace>: <publisher>University of Chicago Press</publisher> (<date>2003</date>), <biblScope unit="page">p.147</biblScope> </bibl> </pre>
Example	<pre> <elementRef key="p" source="tei:2.0.1"/> </pre> <p>Include in the schema an element named <code><p></code> available from the TEI P5 2.0.1 release.</p>
Example	<pre> <schemaSpec ident="myODD" source="mycompiledODD.xml"> <!-- further declarations specifying the components required --> </schemaSpec> </pre> <p>Create a schema using components taken from the file <code>mycompiledODD.xml</code>.</p>

9.3.21. att.handFeatures

att.handFeatures provides attributes describing aspects of the hand in which a manuscript is written. [11.3.2.1. Document Hands]	
Module	tei
Members	handNote
Attributes	Attributes

	scribe	gives a name or other identifier for the scribe believed to be responsible for this hand. Status Optional Datatype <u>teidata.name</u>
	scribeRef	points to a full description of the scribe concerned, typically supplied by a <u><person></u> element elsewhere in the description. Status Optional Datatype 1-# occurrences of <u>teidata.pointer</u> separated by whitespace
	script	characterizes the particular script or writing style used by this hand, for example <i>secretary</i> , <i>copperplate</i> , <i>Chancery</i> , <i>Italian</i> , etc. Status Optional Datatype 1-# occurrences of <u>teidata.name</u> separated by whitespace
	scriptRef	points to a full description of the script or writing style used by this hand, typically supplied by a <u><scriptNote></u> element elsewhere in the description. Status Optional Datatype 1-# occurrences of <u>teidata.pointer</u> separated by whitespace
	medium	describes the tint or type of ink, e.g. <i>brown</i> , or other writing medium, e.g. <i>pencil</i> Status Optional Datatype 1-# occurrences of <u>teidata.enumerated</u> separated by whitespace
	scope	specifies how widely this hand is used in the manuscript. Status Optional Datatype <u>teidata.enumerated</u> Legal values sole are: only this hand is used throughout the manuscript major this hand is used through most of the manuscript minor this hand is used occasionally in the manuscript
Note		Usually either <i>script</i> or <i>scriptRef</i> , and similarly, either <i>scribe</i> or <i>scribeRef</i> , will be supplied.

9.3.22. att.internetMedia

att.internetMedia provides attributes for specifying the type of a computer resource using a standard taxonomy.	
Module	tei
Members	att.media <u>ref</u>
Attributes	<p>Attributes</p> <p>mimeType (MIME media type) specifies the applicable multimedia internet mail extension (MIME) media type Status Optional Datatype 1-# occurrences of <u>teidata.word</u> separated by whitespace</p>
Example	<p>In this example <i>mimeType</i> is used to indicate that the URL points to a TEI XML file encoded in UTF-8.</p> <pre><ref mimeType="application/tei+xml; charset=UTF-8" target="http://sourceforge.net/p/tei/code/HEAD/tree/trunk/P5/Source/guidelines-en.xml"/></pre>

Note	This attribute class provides an attribute for describing a computer resource, typically available over the internet, using a value taken from a standard taxonomy. At present only a single taxonomy is supported, the Multipurpose Internet Mail Extensions (MIME) Media Type system. This typology of media types is defined by the Internet Engineering Task Force in RFC 2046. The list of types is maintained by the Internet Assigned Numbers Authority (IANA). The <i>contentType</i> attribute must have a value taken from this list.
-------------	---

9.3.23. att.naming

att.naming provides attributes common to elements which refer to named persons, places, organizations etc. [3.5.1. Referring Strings 13.3.5. Names and Nyms]	
Module	tei
Members	att.personal <u>rs</u>
Attributes	<p>Attributes <u>att.canonical</u> (@key, @ref)</p> <p>role may be used to specify further information about the entity referenced by this name in the form of a set of whitespace-separated values, for example the occupation of a person, or the status of a place.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.enumerated</u> separated by whitespace</p> <p>nymRef (reference to the canonical name) provides a means of locating the canonical form (<i>nym</i>) of the names associated with the object named by the element bearing it.</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of <u>teidata.pointer</u> separated by whitespace</p> <p>Note The value must point directly to one or more XML elements by means of one or more URIs, separated by whitespace. If more than one is supplied, the implication is that the name is associated with several distinct canonical names.</p>

9.3.24. att.placement

att.placement provides attributes for describing where on the source page or object a textual element appears. [3.4.3. Additions, Deletions, and Omissions 11.3.1.4. Additions and Deletions]	
Module	tei
Members	<u>add note</u>
Attributes	<p>Attributes</p> <p>place specifies where this item is placed.</p> <p>Status Recommended</p> <p>Datatype 1-# occurrences of <u>teidata.enumerated</u> separated by whitespace</p> <p>Suggested values include:</p> <ul style="list-style-type: none"> below below the line bottom at the foot of the page margin in the margin (left, right, or both) top at the top of the page opposite on the opposite, i.e. facing, page overleaf on the other side of the leaf

	<p>above above the line</p> <p>end at the end of e.g. chapter or volume.</p> <p>inline within the body of the text.</p> <p>inspace in a predefined space, for example left by an earlier scribe.</p> <pre><add place="margin">[An addition written in the margin]</add> <add place="bottom opposite">[An addition written at the foot of the current page and also on the facing page]</add> <note place="bottom">Ibid, p.7</note></pre>
--	---

9.3.25. att.pointing

att.pointing provides a set of attributes used by all elements which point to other elements by means of one or more URI references. [1.3.1.1.2. Language Indicators 3.6. Simple Links and Cross-References]	
Module	tei
Members	note ref
Attributes	<p>Attributes</p> <p>targetLang specifies the language of the content to be found at the destination referenced by <i>target</i>, using a 'language tag' generated according to BCP 47.</p> <p>Status Optional</p> <p>Datatype teidata.language</p> <p>Schematron <sch:rule context="tei:*[not(self::tei:schemaSpec)][@targetLang]"> <sch:assert test="@target">@targetLang should only be used on <sch:name/> if @target is specified.</sch:assert> </sch:rule></p> <pre><linkGrp xml:id="pol-swh_aln_2.1-linkGrp"> <ptr xml:id="pol-swh_aln_2.1.1-ptr" target="pol/UDHR/text.xml#pol_txt_1-head" type="tuv" targetLang="pl"/> <ptr xml:id="pol-swh_aln_2.1.2-ptr" target="sw/UDHR/text.xml#swh_txt_1-head" type="tuv" targetLang="sw"/> </linkGrp></pre> <p>In the example above, the <linkGrp> combines pointers at parallel fragments of the <i>Universal Declaration of Human Rights</i>: one of them is in Polish, the other in Swahili.</p> <p>Note The value must conform to BCP 47. If the value is a private use code (i.e., starts with x- or contains x-), a <language> element with a matching value for its <i>ident</i> attribute should be supplied in the TEI header to document this value. Such documentation may also optionally be supplied for non-private-use codes, though these must remain consistent with their IETF/Internet Engineering Task Force definitions.</p> <p>target specifies the destination of the reference by supplying one or more URI References</p> <p>Status Optional</p> <p>Datatype 1-# occurrences of teidata.pointer separated by whitespace</p> <p>Note One or more syntactically valid URI references, separated by whitespace. Because whitespace is used to separate URIs, no whitespace is permitted inside a single</p>

	<p>URI. If a whitespace character is required in a URI, it should be escaped with the normal mechanism, e.g. <code>TEI %20Consortium</code>.</p>
evaluate	<p>specifies the intended meaning when the target of a pointer is itself a pointer.</p> <p>Status Optional</p> <p>Datatype teidata.enumerated</p> <p>Legal values all are:</p> <p>all if the element pointed to is itself a pointer, then the target of that pointer will be taken, and so on, until an element is found which is not a pointer.</p> <p>one if the element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer.</p> <p>none no further evaluation of targets is carried out beyond that needed to find the element specified in the pointer's target.</p> <p>Note If no value is given, the application program is responsible for deciding (possibly on the basis of user input) how far to trace a chain of pointers.</p>

9.3.26. att.ranging

att.ranging provides attributes for describing numerical ranges.	
Module	tei
Members	att.dimensions [att.editLike [att.transcriptional [add del subst] gap org person supplied]]
Attributes	<p>Attributes</p> <p>atLeast gives a minimum estimated value for the approximate measurement. Status Optional Datatype teidata.numeric</p> <p>atMost gives a maximum estimated value for the approximate measurement. Status Optional Datatype teidata.numeric</p> <p>min where the measurement summarizes more than one observation or a range, supplies the minimum value observed. Status Optional Datatype teidata.numeric</p> <p>max where the measurement summarizes more than one observation or a range, supplies the maximum value observed. Status Optional Datatype teidata.numeric</p> <p>confidence specifies the degree of statistical confidence (between zero and one) that a value falls within the range specified by <i>min</i> and <i>max</i>, or the proportion of observed values that fall within that range. Status Optional Datatype teidata.probability</p>
Example	<pre>The MS. was lost in transmission by mail from <del rend="overstrike"> <gap reason="illegible" extent="one or two letters" atLeast="1" atMost="2" unit="chars"/> Philadelphia to the Graphic office, New York.</pre>

9.3.27. att.sortable

att.sortable provides attributes for elements in lists or groups that are sortable, but whose sorting key cannot be derived mechanically from the element content. [9.1. Dictionary Body and Overall Structure]	
Module	tei
Members	correspAction org person
Attributes	<p>Attributes</p> <p>sortKey supplies the sort key for this element in an index, list or group which contains it.</p> <p>Status Optional</p> <p>Datatype teidata.word</p> <pre> David's other principal backer, Josiah ha-Kohen <index indexName="NAMES"> <term sortKey="Azarya_Josiah_Kohen">Josiah ha-Kohen b. Azarya</term> </index> b. Azarya, son of one of the last gaons of Sura was David's own first cousin. </pre> <p>Note The sort key is used to determine the sequence and grouping of entries in an index. It provides a sequence of characters which, when sorted with the other values, will produced the desired order; specifics of sort key construction are application-dependent</p> <p>Dictionary order often differs from the collation sequence of machine-readable character sets; in English-language dictionaries, an entry for <i>4-H</i> will often appear alphabetized under 'fourh', and <i>McCoy</i> may be alphabetized under 'maccoy', while <i>A1</i>, <i>A4</i>, and <i>A5</i> may all appear in numeric order 'alphabetized' between 'a-' and 'AA'. The sort key is required if the orthography of the dictionary entry does not suffice to determine its location.</p>

9.3.28. att.spanning

att.spanning provides attributes for elements which delimit a span of text by pointing mechanisms rather than by enclosing it. [11.3.1.4. Additions and Deletions 1.3.1. Attribute Classes]	
Module	tei
Members	lb
Attributes	<p>Attributes</p> <p>spanTo indicates the end of a span initiated by the element bearing this attribute.</p> <p>Status Optional</p> <p>Datatype teidata.pointer</p> <p>Schematron The @spanTo attribute must point to an element following the current element</p> <pre> <sch:rule context="tei:*[@spanTo]"> <sch:assert test="id(substring(@spanTo,2)) and following::*[@xml:id=substring(current()/ @spanTo,2)]">The element indicated by @spanTo (<sch:value-of select="@spanTo"/>) must follow the current element <sch:name/> </sch:assert> </sch:rule> </pre>
Note	The span is defined as running in document order from the start of the content of the pointing element to the end of the content of the element pointed to by the <i>spanTo</i> attribute (if any). If no value is supplied for the attribute, the assumption is that the span is coextensive with the pointing element. If no content is present, the assumption is that the starting point of the span is immediately following the element itself.

9.3.29. att.tableDecoration

att.tableDecoration provides attributes used to decorate rows or cells of a table. [14. Tables, Formulæ, Graphics and Notated Music]	
Module	tei

Members	<u>cell</u> <u>row</u>
Attributes	<p>Attributes</p> <p>role indicates the kind of information held in this cell or in each cell of this row. Status Optional Datatype <u>teidata.enumerated</u> Suggested values label labelling or descriptive information only. include: data data values.[Default] Note When this attribute is specified on a row, its value is the default for all cells in this row. When specified on a cell, its value overrides any default specified by the <i>role</i> attribute of the parent <u><row></u> element.</p> <p>rows indicates the number of rows occupied by this cell or row. Status Optional Datatype <u>teidata.count</u> Default 1 Note A value greater than one indicates that this cell spans several rows. Where several cells span multiple rows, it may be more convenient to use nested tables.</p> <p>cols (columns) indicates the number of columns occupied by this cell or row. Status Optional Datatype <u>teidata.count</u> Default 1 Note A value greater than one indicates that this cell or row spans several columns. Where an initial cell spans an entire row, it may be better treated as a heading.</p>

9.3.30. att.timed

att.timed provides attributes common to those elements which have a duration in time, expressed either absolutely or by reference to an alignment map. [8.3.5. Temporal Information]	
Module	tei
Members	<u>gap</u>
Attributes	<p>Attributes</p> <p>start indicates the location within a temporal alignment at which this element begins. Status Optional Datatype <u>teidata.pointer</u> Note If no value is supplied, the element is assumed to follow the immediately preceding element at the same hierarchic level.</p> <p>end indicates the location within a temporal alignment at which this element ends. Status Optional Datatype <u>teidata.pointer</u> Note If no value is supplied, the element is assumed to precede the immediately following element at the same hierarchic level.</p>

9.3.31. *att.transcriptional*

att.transcriptional provides attributes specific to elements encoding authorial or scribal intervention in a text when transcribing manuscript or similar sources. [11.3.1.4. Additions and Deletions]	
Module	tei
Members	<u>add</u> <u>del</u> <u>subst</u>
Attributes	<p>Attributes <u>att.editLike</u> (@evidence, @instant) (<u>att.dimensions</u> (@unit, @quantity, @extent, @precision, @scope) (<u>att.ranging</u> (@atLeast, @atMost, @min, @max, @confidence))) <u>att.written</u> (@hand)</p> <p>status indicates the effect of the intervention, for example in the case of a deletion, strikeouts which include too much or too little text, or in the case of an addition, an insertion which duplicates some of the text already present.</p> <p>Status Optional</p> <p>Datatype <u>teidata.enumerated</u></p> <p>Sample values include:</p> <p>duplicate all of the text indicated as an addition duplicates some text that is in the original, whether the duplication is word-for-word or less exact.</p> <p>duplicate-partial part of the text indicated as an addition duplicates some text that is in the original</p> <p>excessStart some text at the beginning of the deletion is marked as deleted even though it clearly should not be deleted.</p> <p>excessEnd some text at the end of the deletion is marked as deleted even though it clearly should not be deleted.</p> <p>shortStart some text at the beginning of the deletion is not marked as deleted even though it clearly should be.</p> <p>shortEnd some text at the end of the deletion is not marked as deleted even though it clearly should be.</p> <p>partial some text in the deletion is not marked as deleted even though it clearly should be.</p> <p>unremarkable the deletion is not faulty.[Default]</p> <p>Note Status information on each deletion is needed rather rarely except in critical editions from authorial manuscripts; status information on additions is even less common. Marking a deletion or addition as faulty is inescapably an interpretive act; the usual test applied in practice is the linguistic acceptability of the text with and without the letters or words in question.</p> <p>cause documents the presumed cause for the intervention.</p> <p>Status Optional</p> <p>Datatype <u>teidata.enumerated</u></p>

	seq	(sequence) assigns a sequence number related to the order in which the encoded features carrying this attribute are believed to have occurred. Status Optional Datatype teidata.count
--	-----	---

9.3.32. *att.typed*

att.typed provides attributes which can be used to classify or subclassify elements in any way. [1.3.1. Attribute Classes 17.1.1. Words and Above 3.5.1. Referring Strings 3.6. Simple Links and Cross-References 3.5.5. Abbreviations and Their Expansions 3.12.1. Core Tags for Verse 7.2.5. Speech Contents 4.1.1. Un-numbered Divisions 4.1.2. Numbered Divisions 4.2.1. Headings and Trailers 4.4. Virtual Divisions 13.3.2.3. Personal Relationships 11.3.1.1. Core Elements for Transcriptional Work 16.1.1. Pointers and Links 16.3. Blocks, Segments, and Anchors 12.2. Linking the Apparatus to the Text 22.5.2. RELAX NG Content Models 8.3. Elements Unique to Spoken Texts 23.3.1.4. Modification of Attribute and Attribute Value Lists]		
Module	tei	
Members	add corresp Desc date del div lb note org quote ref table	
Attributes	<p>Attributes</p> <p>type characterizes the element in some sense, using any convenient classification scheme or typology. Status Optional Datatype teidata.enumerated</p> <pre><div type="verse"> <head>Night in Tarras</head> <lg type="stanza"> <l>At evening tramping on the hot white road</l> <l>...</l> </lg> <lg type="stanza"> <l>A wind sprang up from nowhere as the sky</l> <l>...</l> </lg> </div></pre> <p>Note The <i>type</i> attribute is present on a number of elements, not all of which are members of att.typed, usually because these elements restrict the possible values for the attribute in a specific way.</p> <p>subtype provides a sub-categorization of the element, if needed Status Optional Datatype teidata.enumerated</p> <p>Note The <i>subtype</i> attribute may be used to provide any sub-classification for the element additional to that provided by its <i>type</i> attribute.</p>	
Schematron	<sch:rule context="tei:*[@subtype]"> <sch:assert test="@type">The <sch:name/> element should not be categorized in detail with @subtype unless also categorized in general with @type</sch:assert> </sch:rule>	
Note	When appropriate, values from an established typology should be used. Alternatively a typology may be defined in the associated TEI header. If values are to be taken from a project-specific list, this should be defined using the <valList> element in the project-specific schema description, as described in 23.3.1.4. Modification of Attribute and Attribute Value Lists .	

9.3.33. *att.written*

att.written provides an attribute to indicate the hand in which the textual content of an element was written in the source being transcribed. [1.3.1. Attribute Classes]		
Module	tei	
Members	att.transcriptional [add del subst] div hi note p	
Attributes	Attributes	

	hand	points to a handNote element describing the hand considered responsible for the textual content of the element concerned.
	Status	Optional
	Datatype	teidata.pointer

9.4. Macros

9.4.1. *macro.limitedContent*

macro.limitedContent (paragraph content) defines the content of prose elements that are not used for transcription of extant materials. [1.3. The TEI Class System]	
Module	tei
Used by	witness
Content model	<pre> <content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.limitedPhrase"/> <classRef key="model.inter"/> </alternate> </content> </pre>
Declaration	<pre> macro.limitedContent = (text model.limitedPhrase model.inter)* </pre>

9.4.2. *macro.paraContent*

macro.paraContent (paragraph content) defines the content of paragraphs and similar elements. [1.3. The TEI Class System]	
Module	tei
Used by	add del hi p ref supplied title
Content model	<pre> <content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.gLike"/> <classRef key="model.phrase"/> <classRef key="model.inter"/> <classRef key="model.global"/> <elementRef key="lg"/> <classRef key="model.lLike"/> </alternate> </content> </pre>
Declaration	<pre> macro.paraContent = (text model.gLike model.phrase model.inter model.global lg model.lLike)* </pre>

9.4.3. *macro.phraseSeq*

macro.phraseSeq (phrase sequence) defines a sequence of character data and phrase-level elements. [1.4.1. Standard Content Models]	
Module	tei
Used by	author editor name publisher rs
Content model	<pre> <content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.gLike"/> <classRef key="model.phrase"/> <classRef key="model.global"/> </alternate> </content> </pre>

	<pre></alternate> </content></pre>
Declaration	<pre>macro.phraseSeq = (text model.gLike model.phrase model.global)*</pre>

9.4.4. *macro.phraseSeq.limited*

macro.phraseSeq.limited (limited phrase sequence) defines a sequence of character data and those phrase-level elements that are not typically used for transcribing extant documents. [1.4.1. Standard Content Models]	
Module	tei
Used by	resp
Content model	<pre><content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.limitedPhrase"/> <classRef key="model.global"/> </alternate> </content></pre>
Declaration	<pre>macro.phraseSeq.limited = (text model.limitedPhrase model.global)*</pre>

9.4.5. *macro.specialPara*

macro.specialPara ('special' paragraph content) defines the content model of elements such as notes or list items, which either contain a series of component-level elements or else have the same structure as a paragraph, containing a series of phrase-level and inter-level elements. [1.3. The TEI Class System]	
Module	tei
Used by	cell change handNote licence note q quote
Content model	<pre><content> <alternate minOccurs="0" maxOccurs="unbounded"> <textNode/> <classRef key="model.gLike"/> <classRef key="model.phrase"/> <classRef key="model.inter"/> <classRef key="model.divPart"/> <classRef key="model.global"/> </alternate> </content></pre>
Declaration	<pre>macro.specialPara = (text model.gLike model.phrase model.inter model.divPart model.global)*</pre>

9.5. Datatypes

9.5.1. *teidata.certainty*

teidata.certainty defines the range of attribute values expressing a degree of certainty.	
Module	tei
Used by	teidata.probCert
Content model	<pre><content> <valList type="closed"> <valItem ident="high"/> <valItem ident="medium"/> <valItem ident="low"/> <valItem ident="unknown"/> </valList> </content></pre>
Declaration	

	<code>teidata.certainty = "high" "medium" "low" "unknown"</code>
Note	Certainty may be expressed by one of the predefined symbolic values high, medium, or low. The value unknown should be used in cases where the encoder does not wish to assert an opinion about the matter.

9.5.2. *teidata.count*

teidata.count defines the range of attribute values used for a non-negative integer value used as a count.	
Module	tei
Used by	Element: <ul style="list-style-type: none"> • <code>table/@rows</code> • <code>table/@cols</code>
Content model	<pre><content> <dataRef name="nonNegativeInteger"/> </content></pre>
Declaration	<code>teidata.count = xsd:nonNegativeInteger</code>
Note	Any positive integer value or zero is permitted

9.5.3. *teidata.duration.iso*

teidata.duration.iso defines the range of attribute values available for representation of a duration in time using ISO 8601 standard formats	
Module	tei
Used by	
Content model	<pre><content> <dataRef name="token" restriction="[0-9.,DHMPRSTWYZ/[:-]-]+" /> </content></pre>
Declaration	<code>teidata.duration.iso = token { pattern = "[0-9.,DHMPRSTWYZ/[:-]-]+" }</code>
Example	<code><time dur-iso="PT0,75H">three-quarters of an hour</time></code>
Example	<code><date dur-iso="P1,5D">a day and a half</date></code>
Example	<code><date dur-iso="P14D">a fortnight</date></code>
Example	<code><time dur-iso="PT0.02S">20 ms</time></code>
Note	<p>A duration is expressed as a sequence of number-letter pairs, preceded by the letter P; the letter gives the unit and may be Y (year), M (month), D (day), H (hour), M (minute), or S (second), in that order. The numbers are all unsigned integers, except for the last, which may have a decimal component (using either . or , as the decimal point; the latter is preferred). If any number is 0, then that number-letter pair may be omitted. If any of the H (hour), M (minute), or S (second) number-letter pairs are present, then the separator T must precede the first 'time' number-letter pair.</p> <p>For complete details, see ISO 8601 <i>Data elements and interchange formats — Information interchange — Representation of dates and times</i>.</p>

9.5.4. *teidata.duration.w3c*

teidata.duration.w3c defines the range of attribute values available for representation of a duration in time using W3C datatypes.	
Module	tei
Used by	
Content model	<pre><content> <dataRef name="duration"/> </content></pre>
Declaration	<code>teidata.duration.w3c = xsd:duration</code>

Example	<code><time dur="PT45M">forty-five minutes</time></code>
Example	<code><date dur="P1DT12H">a day and a half</date></code>
Example	<code><date dur="P7D">a week</date></code>
Example	<code><time dur="PT0.02S">20 ms</time></code>
Note	<p>A duration is expressed as a sequence of number-letter pairs, preceded by the letter P; the letter gives the unit and may be Y (year), M (month), D (day), H (hour), M (minute), or S (second), in that order. The numbers are all unsigned integers, except for the S number, which may have a decimal component (using . as the decimal point). If any number is 0, then that number-letter pair may be omitted. If any of the H (hour), M (minute), or S (second) number-letter pairs are present, then the separator T must precede the first 'time' number-letter pair.</p> <p>For complete details, see the W3C specification.</p>

9.5.5. *teidata.enumerated*

teidata.enumerated defines the range of attribute values expressed as a single XML name taken from a list of documented possibilities.	
Module	tei
Used by	<p>Element:</p> <ul style="list-style-type: none"> • <code>change/@type</code> • <code>correspAction/@type</code> • <code>gap/@reason</code> • <code>gap/@agent</code> • <code>idno/@type</code> • <code>idno/@subtype</code> • <code>person/@role</code> • <code>person/@age</code> • <code>q/@type</code> • <code>revisionDesc/@status</code> • <code>surface/@type</code>
Content model	<pre><content> <dataRef key="teidata.word"/> </content></pre>
Declaration	<code>teidata.enumerated = teidata.word</code>
Note	<p>Attributes using this datatype must contain a single 'word' which contains only letters, digits, punctuation characters, or symbols: thus it cannot include whitespace.</p> <p>Typically, the list of documented possibilities will be provided (or exemplified) by a value list in the associated attribute specification, expressed with a <code><valList></code> element.</p>

9.5.6. *teidata.language*

teidata.language defines the range of attribute values used to identify a particular combination of human language and writing system. [6.1. Language Identification]	
Module	tei
Used by	
Content model	<pre><content> <alternate> <dataRef name="language"/> <valList> <valItem ident="" /> </valList> </alternate> </content></pre>
Declaration	

	<div data-bbox="531 253 916 275" data-label="Text"> <pre>teidata.language = xsd:language (" ")</pre> </div> <div data-bbox="196 286 245 309" data-label="Section-Header"> <p>Note</p> </div> <div data-bbox="499 286 1394 356" data-label="Text"> <p>The values for this attribute are language ‘tags’ as defined in BCP 47. Currently BCP 47 comprises RFC 5646 and RFC 4647; over time, other IETF documents may succeed these as the best current practice.</p> </div> <div data-bbox="499 358 1382 454" data-label="Text"> <p>A ‘language tag’, per BCP 47, is assembled from a sequence of components or <i>subtags</i> separated by the hyphen character (-, U+002D). The tag is made of the following subtags, in the following order. Every subtag except the first is optional. If present, each occurs only once, except the fourth and fifth components (variant and extension), which are repeatable.</p> </div> <div data-bbox="499 468 592 492" data-label="Section-Header"> <p>language</p> </div> <div data-bbox="611 492 1366 611" data-label="Text"> <p>The IANA-registered code for the language. This is almost always the same as the ISO 639 2-letter language code if there is one. The list of available registered language subtags can be found at http://www.iana.org/assignments/language-subtag-registry. It is recommended that this code be written in lower case.</p> </div> <div data-bbox="499 622 560 647" data-label="Section-Header"> <p>script</p> </div> <div data-bbox="611 647 1361 790" data-label="Text"> <p>The ISO 15924 code for the script. These codes consist of 4 letters, and it is recommended they be written with an initial capital, the other three letters in lower case. The canonical list of codes is maintained by the Unicode Consortium, and is available at http://unicode.org/iso15924/iso15924-codes.html. The IETF recommends this code be omitted unless it is necessary to make a distinction you need.</p> </div> <div data-bbox="499 801 566 826" data-label="Section-Header"> <p>region</p> </div> <div data-bbox="611 826 1356 1014" data-label="Text"> <p>Either an ISO 3166 country code or a UN M.49 region code that is registered with IANA (not all such codes are registered, e.g. UN codes for economic groupings or codes for countries for which there is already an ISO 3166 2-letter code are not registered). The former consist of 2 letters, and it is recommended they be written in upper case; the list of codes can be searched or browsed at https://www.iso.org/obp/ui/#search/code/. The latter consist of 3 digits; the list of codes can be found at http://unstats.un.org/unsd/methods/m49/m49.htm.</p> </div> <div data-bbox="499 1025 576 1050" data-label="Section-Header"> <p>variant</p> </div> <div data-bbox="611 1050 1335 1122" data-label="Text"> <p>An IANA-registered variation. These codes are used to indicate additional, well-recognized variations that define a language or its dialects that are not covered by other available subtags.</p> </div> <div data-bbox="499 1133 598 1158" data-label="Section-Header"> <p>extension</p> </div> <div data-bbox="611 1158 1369 1229" data-label="Text"> <p>An extension has the format of a single letter followed by a hyphen followed by additional subtags. These exist to allow for future extension to BCP 47, but as of this writing no such extensions are in use.</p> </div> <div data-bbox="499 1240 614 1265" data-label="Section-Header"> <p>private use</p> </div> <div data-bbox="611 1265 1351 1406" data-label="Text"> <p>An extension that uses the initial subtag of the single letter <i>x</i> (i.e., starts with <i>x-</i>) has no meaning except as negotiated among the parties involved. These should be used with great care, since they interfere with the interoperability that use of RFC 4646 is intended to promote. In order for a document that makes use of these subtags to be TEI-conformant, a corresponding <code><language></code> element must be present in the TEI header.</p> </div> <div data-bbox="499 1420 1369 1494" data-label="Text"> <p>There are two exceptions to the above format. First, there are language tags in the IANA registry that do not match the above syntax, but are present because they have been ‘grandfathered’ from previous specifications.</p> </div> <div data-bbox="499 1494 1385 1612" data-label="Text"> <p>Second, an entire language tag can consist of only a private use subtag. These tags start with <i>x-</i>, and do not need to follow any further rules established by the IETF and endorsed by these Guidelines. Like all language tags that make use of private use subtags, the language in question must be documented in a corresponding <code><language></code> element in the TEI header.</p> </div> <div data-bbox="523 1612 697 1637" data-label="Text"> <p>Examples include</p> </div> <div data-bbox="499 1650 523 1675" data-label="Section-Header"> <p>sn</p> </div> <div data-bbox="611 1675 675 1700" data-label="Text"> <p>Shona</p> </div> <div data-bbox="499 1711 571 1736" data-label="Section-Header"> <p>zh-TW</p> </div> <div data-bbox="611 1736 716 1760" data-label="Text"> <p>Taiwanese</p> </div> <div data-bbox="499 1771 632 1796" data-label="Section-Header"> <p>zh-Hant-HK</p> </div> <div data-bbox="611 1796 1174 1821" data-label="Text"> <p>Chinese written in traditional script as used in Hong Kong</p> </div> <div data-bbox="499 1832 563 1856" data-label="Section-Header"> <p>en-SL</p> </div> <div data-bbox="611 1856 941 1881" data-label="Text"> <p>English as spoken in Sierra Leone</p> </div> <div data-bbox="499 1892 523 1917" data-label="Section-Header"> <p>pl</p> </div> <div data-bbox="611 1917 675 1942" data-label="Text"> <p>Polish</p> </div> <div data-bbox="499 1953 571 1977" data-label="Section-Header"> <p>es-MX</p> </div>
--	--

	<p>Spanish as spoken in Mexico</p> <p>es-419</p> <p>Spanish as spoken in Latin America</p> <p>The W3C Internationalization Activity has published a useful introduction to BCP 47, Language tags in HTML and XML.</p>
--	--

9.5.7. *teidata.name*

teidata.name defines the range of attribute values expressed as an XML Name.	
Module	tei
Used by	
Content model	<pre><content> <dataRef name="Name" /> </content></pre>
Declaration	<pre>teidata.name = xsd:Name</pre>
Note	Attributes using this datatype must contain a single word which follows the rules defining a legal XML name (see http://www.w3.org/TR/REC-xml/#dt-name): for example they cannot include whitespace or begin with digits.

9.5.8. *teidata.numeric*

teidata.numeric defines the range of attribute values used for numeric values.	
Module	tei
Used by	
Content model	<pre><content> <alternate> <dataRef name="double" /> <dataRef name="token" restriction="(\-?[0-9]+\-?[0-9]+)" /> <dataRef name="decimal" /> </alternate> </content></pre>
Declaration	<pre>teidata.numeric = xsd:double token { pattern = "(\-?[0-9]+\-?[0-9]+)" } xsd:decimal</pre>
Note	<p>Any numeric value, represented as a decimal number, in floating point format, or as a ratio.</p> <p>To represent a floating point number, expressed in scientific notation, 'E notation', a variant of 'exponential notation', may be used. In this format, the value is expressed as two numbers separated by the letter E. The first number, the significand (sometimes called the mantissa) is given in decimal format, while the second is an integer. The value is obtained by multiplying the mantissa by 10 the number of times indicated by the integer. Thus the value represented in decimal notation as 1000.0 might be represented in scientific notation as 10E3.</p> <p>A value expressed as a ratio is represented by two integer values separated by a solidus (/) character. Thus, the value represented in decimal notation as 0.5 might be represented as a ratio by the string 1/2.</p>

9.5.9. *teidata.outputMeasurement*

teidata.outputMeasurement defines a range of values for use in specifying the size of an object that is intended for display.	
Module	tei
Used by	
Content model	<pre><content> <dataRef name="token" restriction="[\-+]?[0-9]+(\.0-9+)?(% cm mm in pt pc px em ex gd rem vw vh vm)" /> </content></pre>
Declaration	<pre>teidata.outputMeasurement = token { pattern = "[-+]?[0-9]+(\.0-9+)?(% cm mm in pt pc px em ex gd rem vw vh vm)"</pre>

	}
Example	<pre> <figure> <head>The TEI Logo</head> <figDesc>Stylized yellow angle brackets with the letters <mentioned>TEI</mentioned> in between and <mentioned>text encoding initiative</mentioned> underneath, all on a white background.</figDesc> <graphic height="600px" width="600px" url="http://www.tei-c.org/logos/TEI-600.jpg"/> </figure> </pre>
Note	These values map directly onto the values used by XSL-FO and CSS. For definitions of the units see those specifications; at the time of this writing the most complete list is in the CSS3 working draft.

9.5.10. *teidata.pattern*

teidata.pattern defines attribute values which are expressed as a regular expression.	
Module	tei
Used by	
Content model	<pre> <content> <dataRef name="token"/> </content> </pre>
Declaration	teidata.pattern = token
Note	<p>A regular expression, often called a <i>pattern</i>, is an expression that describes a set of strings. They are usually used to give a concise description of a set, without having to list all elements. For example, the set containing the three strings <i>Handel</i>, <i>Händel</i>, and <i>Haendel</i> can be described by the pattern <code>H(ä ae?)ndel</code> (or alternatively, it is said that the pattern <code>H(ä ae?)ndel</code> <i>matches</i> each of the three strings)</p> <p>Wikipedia This TEI datatype is mapped to the XSD token datatype, and may therefore contain any string of characters. However, it is recommended that the value used conform to the particular flavour of regular expression syntax supported by XSD Schema.</p>

9.5.11. *teidata.point*

teidata.point defines the data type used to express a point in cartesian space.	
Module	tei
Used by	
Content model	<pre> <content> <dataRef name="token" restriction="(\\-?[0-9]+\\.?[0-9]*,\\-?[0-9]+\\.?[0-9]*)"/> </content> </pre>
Declaration	teidata.point = token { pattern = "(\\-?[0-9]+\\.?[0-9]*,\\-?[0-9]+\\.?[0-9]*)" }
Example	<pre> <facsimile> <surface ulx="0" uly="0" lrx="400" lry="280"> <zone points="220,100 300,210 170,250 123,234"> <graphic url="handwriting.png" /> </zone> </surface> </facsimile> </pre>
Note	A point is defined by two numeric values, which may be expressed in any notation permitted.

9.5.12. *teidata.pointer*

teidata.pointer defines the range of attribute values used to provide a single URI, absolute or relative, pointing to some other resource, either within the current document or elsewhere.	
Module	tei
Used by	<p>Element:</p> <ul style="list-style-type: none"> • author/@ref • catRef/@target

	<ul style="list-style-type: none"> • <u>change</u>/@who • <u>editor</u>/@ref • <u>gap</u>/@hand • <u>graphic</u>/@source • <u>licence</u>/@target • <u>note</u>/@targetEnd • <u>resp</u>/@ref • <u>witness</u>/@facs
Content model	<pre><content> <dataRef name="anyURI" /> </content></pre>
Declaration	<pre>teidata.pointer = xsd:anyURI</pre>
Note	<p>The range of syntactically valid values is defined by RFC 3986 <i>Uniform Resource Identifier (URI): Generic Syntax</i>. Note that the values themselves are encoded using RFC 3987 <i>Internationalized Resource Identifiers (IRIs)</i> mapping to URIs. For example, https://secure.wikimedia.org/wikipedia/en/wiki/% is encoded as https://secure.wikimedia.org/wikipedia/en/wiki/%25 while http://###.#####-#####.####/ is encoded as http://xn--4gbrim.xn---rmckbbajlc6dj7bxne2c.xn--wgbh1c/</p>

9.5.13. teidata.probCert

teidata.probCert defines a range of attribute values which can be expressed either as a numeric probability or as a coded certainty value.	
Module	tei
Used by	
Content model	<pre><content> <alternate> <dataRef key="teidata.probability"/> <dataRef key="teidata.certainty"/> </alternate> </content></pre>
Declaration	<pre>teidata.probCert = teidata.probability teidata.certainty</pre>

9.5.14. teidata.probability

teidata.probability defines the range of attribute values expressing a probability.	
Module	tei
Used by	<u>teidata.probCert</u>
Content model	<pre><content> <dataRef name="double"/> </content></pre>
Declaration	<pre>teidata.probability = xsd:double</pre>
Note	Probability is expressed as a real number between 0 and 1; 0 representing <i>certainly false</i> and 1 representing <i>certainly true</i> .

9.5.15. teidata.replacement

teidata.replacement defines attribute values which contain a replacement template.	
Module	tei
Used by	
Content model	<pre><content> <textNode/> </content></pre>

Declaration	<code>teidata.replacement = text</code>
--------------------	---

9.5.16. *teidata.sex*

teidata.sex defines the range of attribute values used to identify human or animal sex.	
Module	tei
Used by	Element: <ul style="list-style-type: none"> • <code>person/@sex</code>
Content model	<pre><content> <dataRef key="teidata.word"/> </content></pre>
Declaration	<code>teidata.sex = teidata.word</code>
Note	Values for attributes using this datatype may be locally defined by a project, or may refer to an external standard, such as vCard's sex property http://microformats.org/wiki/gender-formats (in which M indicates male, F female, O other, N none or not applicable, U unknown), or the often used ISO 5218:2004 <i>Representation of Human Sexes</i> http://standards.iso.org/ittf/PubliclyAvailableStandards/c036266_ISO_IEC_5218_2004(E_F).zip (in which 0 indicates unknown; 1 male; 2 female; and 9 not applicable, although the ISO standard is widely considered inadequate); cf. CETH's <i>Recommendations for Inclusive Data Collection of Trans People</i> http://transhealth.ucsf.edu/trans?page=lib-data-collection .

9.5.17. *teidata.temporal.iso*

teidata.temporal.iso defines the range of attribute values expressing a temporal expression such as a date, a time, or a combination of them, that conform to the international standard <i>Data elements and interchange formats – Information interchange – Representation of dates and times</i> .	
Module	tei
Used by	
Content model	<pre><content> <alternate> <dataRef name="date"/> <dataRef name="gYear"/> <dataRef name="gMonth"/> <dataRef name="gDay"/> <dataRef name="gYearMonth"/> <dataRef name="gMonthDay"/> <dataRef name="time"/> <dataRef name="dateTime"/> <dataRef name="token" restriction=""[0-9.,DHMPRTWYZ/;+\\-]+"/> </alternate> </content></pre>
Declaration	<pre>teidata.temporal.iso = xsd:date xsd:gYear xsd:gMonth xsd:gDay xsd:gYearMonth xsd:gMonthDay xsd:time xsd:dateTime token { pattern = "[0-9.,DHMPRTWYZ/;+\\-]+" }</pre>
Note	<p>If it is likely that the value used is to be compared with another, then a time zone indicator should always be included, and only the <code>dateTime</code> representation should be used.</p> <p>For all representations for which ISO 8601 describes both a <i>basic</i> and an <i>extended</i> format, these Guidelines recommend use of the extended format.</p> <p>While ISO 8601 permits the use of both 00:00 and 24:00 to represent midnight, these Guidelines strongly recommend against the use of 24:00.</p>

9.5.18. *teidata.temporal.w3c*

teidata.temporal.w3c defines the range of attribute values expressing a temporal expression such as a date, a time, or a combination of them, that conform to the W3C <i>XML Schema Part 2: Datatypes Second Edition</i> specification.	
--	--

Module	tei
Used by	
Content model	<pre> <content> <alternate> <dataRef name="date"/> <dataRef name="gYear"/> <dataRef name="gMonth"/> <dataRef name="gDay"/> <dataRef name="gYearMonth"/> <dataRef name="gMonthDay"/> <dataRef name="time"/> <dataRef name="dateTime"/> </alternate> </content> </pre>
Declaration	<pre> teidata.temporal.w3c = xsd:date xsd:gYear xsd:gMonth xsd:gDay xsd:gYearMonth xsd:gMonthDay xsd:time xsd:dateTime </pre>
Note	If it is likely that the value used is to be compared with another, then a time zone indicator should always be included, and only the dateTime representation should be used.

9.5.19. *teidata.text*

teidata.text defines the range of attribute values used to express some kind of identifying string as a single sequence of unicode characters possibly including whitespace.

Module	tei
Used by	
Content model	<pre> <content> <dataRef name="string"/> </content> </pre>
Declaration	<pre> teidata.text = string </pre>
Note	Attributes using this datatype must contain a single 'token' in which whitespace and other punctuation characters are permitted.

9.5.20. *teidata.truthValue*

teidata.truthValue defines the range of attribute values used to express a truth value.

Module	tei
Used by	Element: <ul style="list-style-type: none"> • note/@anchored
Content model	<pre> <content> <dataRef name="boolean"/> </content> </pre>
Declaration	<pre> teidata.truthValue = xsd:boolean </pre>
Note	The possible values of this datatype are 1 or true, or 0 or false. This datatype applies only for cases where uncertainty is inappropriate; if the attribute concerned may have a value other than true or false, e.g. unknown, or inapplicable, it should have the extended version of this datatype: data.xTruthValue .

9.5.21. *teidata.versionNumber*

teidata.versionNumber defines the range of attribute values used for version numbers.

Module	tei
Used by	

Content model	<pre><content> <dataRef name="token" restriction="[\\d]+[a-z]*[\\d]*(\\. [\\d]+[a-z]*[\\d]*){0,3}"/> </content></pre>
Declaration	<pre>teidata.versionNumber = token { pattern = "[\\d]+[a-z]*[\\d]*(\\. [\\d]+[a-z]*[\\d]*){0,3}" }</pre>

9.5.22. *teidata.word*

teidata.word defines the range of attribute values expressed as a single word or token.	
Module	tei
Used by	<u>teidata.enumerated</u> <u>teidata.sexElement</u> : <ul style="list-style-type: none"> • <u>org/</u>@role • <u>supplied/</u>@reason
Content model	<pre><content> <dataRef name="token" restriction="(\p{L} \p{N} \p{P} \p{S})+"/> </content></pre>
Declaration	<pre>teidata.word = token { pattern = "(\p{L} \p{N} \p{P} \p{S})+" }</pre>
Note	Attributes using this datatype must contain a single 'word' which contains only letters, digits, punctuation characters, or symbols: thus it cannot include whitespace.

9.5.23. *teidata.xTruthValue*

teidata.xTruthValue (extended truth value) defines the range of attribute values used to express a truth value which may be unknown.	
Module	tei
Used by	
Content model	<pre><content> <alternate> <dataRef name="boolean"/> <valList> <valItem ident="unknown"/> <valItem ident="inapplicable"/> </valList> </alternate> </content></pre>
Declaration	<pre>teidata.xTruthValue = xsd:boolean ("unknown" "inapplicable")</pre>
Note	In cases where where uncertainty is inappropriate, use the datatype data.TruthValue.

9.5.24. *teidata.xpath*

teidata.xpath defines attribute values which contain an XPath expression.	
Module	tei
Used by	
Content model	<pre><content> <textNode/> </content></pre>
Declaration	<pre>teidata.xpath = text</pre>
Note	Any XPath expression using the syntax defined in
