Johannes Knüchel
Andrea Ortner
Stand: Oktober 2021

1. Zu diesem Dokument

In diesem Dokument werden die Kodierrichtlinien für TEI/XML-Dokumente beschrieben, die im Projekt *Intertextuality in the Legal Papers of Karl Kraus. A Scholarly Digital Edition* (FWF Projektnr. P 31138-G30, PI DDr.in Katharina Prager) zur Anwendung kommen.

Dieses Projekt wird vom Ludwig Boltzmann Institut für Digital History (https://geschichte.lbg.ac.at) in Zusammenarbeit mit dem Austrian Centre for Digital Humanities and Cultural Heritage (ACDH-CH) der Österreichischen Akademie der Wissenschaften (https://acdh.oeaw.ac.at) und der Wienbibliothek im Rathaus (https://www.wienbibliothek.at) umgesetzt. Ziel des Projekts ist es, eine digitale Edition der Kanzleiakten aus der Kanzlei Oskar Samek zu erstellen, welche die Fälle dokumentieren, in die Karl Kraus involviert war. Diese digitale Edition soll es ihren Nutzer_innen ermöglichen, den unterschiedlichen intertextuellen Bezügen in diesen Akten nachzuforschen.

Als Grundlage dient dabei einerseits das Vorgängerprojekt *Karl Kraus Online* (https://www.kraus.wienbibliothek.at), andererseits die digitalisierte Fassung der Kanzleiakten in der digitalen Wienbibliothek (https://www.digital.wienbibliothek.at). Diese beiden Quellen bauen auf der von Katharina Prager erstellten Ordnung der Bestandsliste des Kraus-Archivs der Wienbibliothek im Rathaus auf und orientieren sich an den Signaturen dieser Liste. Diese Ordnungslogik wird auch im vorliegenden Projekt als Ausgangsbasis übernommen. Ebenfalls eine wichtige Grundlage für die Editionsarbeit stellt die von Hermann Böhm erstellte, heute vergriffene Lese-Edition der Akten in vier Bänden dar (*Karl Kraus contra ...: die Prozeβakten der Kanzlei Oskar Samek in der Wiener Stadt- und Landesbibliothek, bearb. und kommentiert von Hermann Böhm, Wien, Wiener Stadt- u. Landesbibliothek, Bd. 1–4, 1995–1997).*

Im Rahmen des Projekts wird auf Basis der genannten Quellen für jedes erhaltene Einzeldokument im Archiv ein korrespondierendes TEI/XML-Dokument erstellt, in dem sich eine annotierte Transkription des Volltexts sowie alle relevanten Metadaten und Verweise auf Digitalisate des Archivdokuments befinden. Darüber hinaus wird pro Fall ein weiteres TEI/XML-Dokument angelegt, in dem die entsprechenden Metadaten festgehalten und eine Liste der zum Fall gehörigen Einzeldokumente angelegt wird. Wie genau diese TEI/XML-Dokumente entstehen und strukturiert sind, ist im Folgenden beschrieben.

2. Workflow

Der Workflow zur Erstellung eines Dokuments umfasst folgende Schritte:

- · Auswahl des zu transkirbierenden Dokuments
- Transkribus: Upload, Erstellen der Transkription
- Bildzuordnung
- · Erstellen des TEI Dokuments
- Bearbeiten des TEI Dokuments

3. Metadaten des TEI-Dokuments

Das Element <fileDesc> enthält die Metadaten zum elektronischen Dokument.

3.2. Herausgebende Institutionen

Im Element spublisher> im spublicationStmt> finden sich Informationen zu den herausgebenden Institutionen des Dokuments. Im Falle des vorliegenden Projekts sind es drei Institutionen, die jeweils in einem spublisher>-Element mit entsprechenden Kindelementen (spublisher>, sowie <pr

Das Element <a vailability> enthält im Element einen Verweis mittels target auf die Creative Commons-Lizenz, unter der die Daten bereitgestellt werden.

Die <idno> Elemente geben interne und externe Identifier an. In der Regel sind drei <idno> Elemente vorhanden. Das erste verweist mit dem type URL und dem subtype legalkraus auf die ID in der digitalen Edition. Die zweite verweist mit demselben type und dem subtype krausonline auf die ID im schon genannten Vorgängerprojekt Karl Kraus Online (https://www.kraus.wienbibliothek.at). Das dritte <idno> Element ist, insofern eine Transkription des Dokuments angefertigt wurde, vom type ID und dem subtype transkribus. Dieser letzte Identifier bezieht sich auf die ID im Transkriptionsprogramm Transkribus.

3.3. Verknüpfung mit dem Fall

Im Element <u><title></u> vom *type* collection im <u><seriesStmt></u> findet sich die Information zu dem Fallkomplex, dem das Dokument angehört. Das Attribut *ref* verweist dabei auf das entsprechende Falldokument in der digitalen Edition.

```
<seriesStmt>
  <title type="collection"
    ref="https://id.acdh.oeaw.ac.at/legalkraus/C_000002">Karl Kraus ca. Reichspost</title>
  </seriesStmt>
```

3.4. Status des Dokuments, Arbeitsstand

Der Status der Bearbeitung des gesamten Dokuments wird in der <<u>revisionDesc></u> im Attribut *status* notiert. Ist das Dokument noch in Bearbeitung, hat *status* den Wert draft. Sind alle Arbeitsschritte für das Dokument abgeschlossen, hat *status* den Wert done.

Allgemeiner ausgedrückt umfassen die Arbeitsschritte, die in <a hr

Jedes

4. Metadaten zum historischen Dokument

Ebenfalls im <teiHeader> werden Metadaten zum historischen Dokument hinterlegt.

4.1. Quelle, Textzeugen, Beilagen

Informationen zur Quelle finden sich im Element <sourceDesc>. Im Kindelement listWit> wird der Textzeuge bzw. werden die Textzeugen in einem oder mehreren <witness>-Elemente(n) mit einer xml:id sowie einer Verlinkung auf das entsprechende Faksimile in facs angegeben.

Stempel werden in der <sourceDesc> im Kindelement <msDesc> im Element <ab> mit dem Attribut type und dem Wert stamp notiert. Im Attribut source des <stamp>-Elements wird auf die Quelle des Stempels verwiesen, durch die xml:id wird der Stempel zudem eindeutig identifizierbar.

```
<msDesc>
<ab type="stamp">
    <stamp xml:id="uuid_79f806al-ab26-445f-b806-alab26c45fb5"
    source="#36793"/>
    </ab>
```

</msDesc>

Ist eine Beilage zu einem Dokument verhanden, wird dieses im Element <a c Material Special Spe

```
<ab type="appendix"
source="#D_000002-002-000-acc001">1 Beilage</ab>
```

Informationen zur Materialität des Dokuments sind ebenso in der https://example.com/spe-mit-dem-type mit dem Attribut ref auf die projektspezifische Taxonomie verwiesen, in der die zur Auswahl stehenden Materialitätstypen definiert sind. Als String sind ebenso eine Prosabeschreibung des Materialitätstyps sowie die entsprechende Sigle vorhanden. Sind mehrere Textzeugen überliefert, werden mehrere objectType--Elemente angelegt und mit source-Attributen versehen.

4.2. Kontextinformationen

Im Element sprofileDesc lassen sich Kontextinformationen zum Dokument, etwa den beteiligten Personen, dem Entstehungsdatum, usw. hinterlegen.

4.2.1. Datierung

Zur Datierung (und als Grundlage für eine Sortierung) wird innerhalb von ein Datum im ISO-Format (JJJ-MM-TT) im Attribut when-iso angegeben. Ist ein Dokument nicht eindeutig datierbar, so wird das Datum mit notBefore-iso und / oder notAfter-iso eingeschränkt. Für die Sortierung wird sortDate hinzugefügt. Wenn eine Datierung nicht möglich ist, ist weder sortDate noch ein ISO-Wert vorhanden. Zur weiteren Klassifizierung des Datums wird subtype eingeführt. Zur Auswahl stehen die Werte produced (Datum der Entstehung) und received (Datum des Empfangens). Der String entspricht einem normalisierten Datum im Format TT.MM.JJJJ.

```
<creation>
  <date type="sortDate" subtype="received"
  when-iso="1922-11-30">30.11.1922</date>
</creation>
```

4.2.2. *Sprache*

In <a

```
<langUsage>
  <language ident="ger">Deutsch</language>
  </langUsage>
```

4.2.3. Klassifizierung des Dokuments

Auf der Dokumentebene wird in textClass der Dokumenttyp definiert. Im Kindelement keywords mit dem passenden term ist eine Prosabezeichnung des Dokumenttyps zu finden. Im Kindelement classCode mit dem Attribut scheme, welches auf den entsprechenden Datensatz in der projektspezifischen Taxonomie verweist, ist als String die Sigle für den Datensatz zu finden. Grundsätzlich sind mehrere Dokumenttypen – im Gegensatz zu den singulären Materialitätstypen (siehe sourceDesc) – bei einem Dokument möglich. Sind mehrere Textzeugen vorhanden, so wird term und classCode das Attribut source hinzugefügt, das auf den entsprechenden Textzeugen verweist.

```
<textClass>
<keywords>
<term source="#D_000002-002-000-wit01">Brief</term>
<term source="#D_000002-002-000-wit02">Brief</term>
</keywords>
</lassCode scheme="https://vocabs.acdh.oeaw.ac.at/legalkraus-doctypes/v1.0/"
source="#D_000002-002-000-wit01">D.K.BRF</classCode>
```

```
<classCode scheme="https://vocabs.acdh.oeaw.ac.at/legalkraus-doctypes/v1.0/"
source="#D_000002-002-000-wit02">D.K.BRF</classCode>
</textClass>
```

4.2.4. Beteiligte Personen und Institutionen

In der sparticDesc werden beteiligte Personen und Institutionen (im Unterschied zu rein namentlich genannten) in ihrer Rolle (role) verzeichnet. Im Element slistPerson und den ensprechenden Kindelementen sperson werden beteiligte Personen festgehalten. Jedes sperson>-Element erhält dabei ein Attribut role mit einem Verweis auf die Rolle der Person in diesem Dokument. Der Wert von role entspricht einer projektspezifischen Taxonomie. Jede Person erhält außerdem einen Verweis auf den ensprechenden Datensatz in der PMB mittels eines ref-Attributs sowie ein Kindelement mit dem Namen der Person, spersName. Analog funktioniert die Dokumentation der beteiligten Institutionen: Im Element slistOrg werden sorg-Elemente mit dem Kindelement sorg sowie den Attributen role und ref angegeben.

4.2.5. Metadaten zu Korrespondenzstücken

Metadaten zu Korrespondenzstücken werden in der correspDesc> versammelt. Bei Dokumenten, die keine Korrespondenzstücke ausmachen, fehlt dieser Abschnitt. Es gibt drei Möglichkeiten für die Struktur der correspDesc>: Erstens ist sowohl der die Absender in als auch der die Empfänger in eine Person. Zweitens ist der die Absender in eine Person, der die Empfänger in eine Institution. Drittens ist der die Absender in eine Institution, der die Empfänger in eine Person. Entsprechend kommen die Elemente correspDesc> versammelt. Bei Dokumenten, die keine Korrespondenzstücke ausmachen, die Absender in eine Person. Zweitens ist der die Absender in eine Person. Entsprechend kommen die Elemente correspDesc> versammelt. Bei Dokumenten, die keine Korrespondenzstücke ausmachen, die keine KorrespDesc> versammelt. Bei Dokumenten, die keine KorrespDesc> versammelt. Bei Dokumenten keine keine KorrespDesc> versammelt. Bei Dokumenten keine keine kei

Die Namen werden dem Original entnommen. Zeilenfälle werden mit einem senkrechten Strich (|) notiert. Die 'Rolle', z. B. Rechtsanwalt, wird gegebenenfalls ebenso angebeben.

Der_Die Absender_in wird in <a

In <address> werden die Anschriften dokumentiert. <street> verweist auf einen Eintrag in der PMB und <settlement> ebenso. Das Datum wird sowohl im ISO-Format in *date* als auch originalgetreu im entsprechenden String wiedergegeben.

In <<u>noteGrp></u> sind optional weitere Metadaten zur Korrespondenz enthalten. Mittels <<u>note></u> und entsprechenden *type-*Attributen kann ein Betreff (subject) und eine Diktatsigle (dictation) verzeichnet werden.

```
<correspDesc>
 <correspAction type="sent">
  #11988">Karl Kraus
  <roleName ref="https://vocabs.acdh.oeaw.ac.at/legalkraus-roles/v1.0/defendant"/>

 </correspAction>
 <note type="subject">Privatanklage</note>
 <note type="dictation"/>
</correspDesc>
```

4.2.6. Schreiberhände

Schreiberhände werden im Header innerhalb des Elements handNotes> definiert. Sind keine handNotes> angelegt, handelt es sich standardmäßig um Typoskripte.

Jede Schreiberhand wird in einem <a href="https://example.com/hand

```
<handNotes>
<handNote xml:id="D_000001-001-000-hand01"
source="#D_000001-001-000-wit01" scribeRef="#38909" medium="black-ink"
cert="high" resp="#IL"/>
</handNotes>
```

5. Bilddaten

Die der digitalen Edition zugrundeliegenden Faksimiles sind in sacsimile zu finden. Innerhalb von sacsimile ist mindestens eine surfaceGrp> enthalten. Diese beschreibt ein Blatt. Dieses Blatt kann in mehrere surface-Elemente unterteilt werden. Diese machen die Seiten aus, die mittels type und recto bzw. verso (Vorder-/ Rückseite) noch näher bestimmt werden. Diese surface-Elemente beinhalten wiederum ein bis drei sgraphic-Elemente, die mittels source und entsprechenden Attributwerten unterschieden werden. Liegt ein Doppelblatt vor, so wird die Gruppierung der Faksimiles entsprechend angepasst.

Die Faksimiles des Vorläuferprojekts "Karl Kraus Online" werden mit dem Attributwert krausonline versehen, jene der Wienbibliothek im Rathaus mit wienbibliothek und jene der projekteigenen Scans mit scans. Sowohl sarfaceGrp und surface erhalten eine xml:id zur eindeutigen Identifizierung. Derzeit sind die Faksimiles nur für den 'Haupttextzeugen' zugeordnet. Insofern weitere Textzeugen vorhanden und verlinkt sind, werden diese in einem weiteren facsimile>-Element mit dem Attribut ana und dem Wert further-witnesses zur vorläufigen Differenzierung versehen.

```
<facsimile xml:id="D_000002-002-000-facs001">
 <surfaceGrp xml:id="D_000002-002-000-facs001-1001";</pre>

   source="wienbibliothek" ana="status:checked"/
 </surface>
 </surfaceGrp>
</facsimile>
```

6. Transkription des Dokuments

Die Transkription erfolgt im Element

des Elements <text>.

6.1. Editorische Einrichtungsfragen

Folgende Prinzipien wurden bei der Erstellung der Transkriptionen mit Transkribus berücksichtigt:

Spatien zwischen Abkürzungen, 'Z.A.' oder 'Z. A.', 'St.P.O.', 'P.A.', 'Urh.Ges.' etc., 'Art. IX' oder 'Art.IX', bei Datumsangaben, Komposita wie 'Kronos-Verlag' ('Kronos - Verlag') werden grundsätzlich nicht gesetzt.

Paginierungen im Typoskript werden nicht transkribiert.

Der Umgang mit Aktenzeichen, tabeller. Darstellung, muss mit einem Editionsbeispiel geklärt und auch mit dem Staatsarchiv geklärt werden, 35.13. 4. Seite - Check Formatierung Tabelle / Zeilen

Vorgefertigte Briefköpfe (Adressen etc.) werden erst einmal nicht zeilengetreu transkribiert bzw. nicht wiedergegeben; Durchsuchbarkeit durch Angabe im TEI-Header möglich

Interpunktion erfolgt zunächst streng nach Typoskript (selbst wenn dort eine Struktur erkennbar ist, die nicht konsequent eingehalten wird [etwa bei Aufzählungen etc.]) und wird nicht korrigiert, Bsp: 27.5, S. 4: Dr. Josef Szekely Wien, IX. Canisiusgasse 8 (Stunde)

Falsche Apostrophierung wird ebenfalls nicht korrigiert: Bsp. Ely's in Elys -> Tippfehler werden allerdings korrigiert, ebenso Anführungszeichen nach typographischen Regeln übernommen (öffnende und schließende sowie normale und einfache entsprechend angleichen), hingegen wird Grammatik/Rechtschreibung übernommen, aber Durchsuchbarkeit sollte stets gewährleistet bleiben

Bei Hochstellung von Zahlen und Buchstaben wird verzichtet: bspw. Hochstellung bei Dr wird immer mit Dr. wiedergeben, bei Uhrzeiten ebenfalls auf Hochstellung verzichten

Abkürzungen in hs. Protokollen werden aufgelöst: bspw. Zge -> Zeuge

Problem bei Korrektur der Rechtschreibung: nach zeitgenössischen Rechtschreibregeln -> wahrscheinlich brauchen wir einfach klare Regeln, wann man in Rechtschreibung u. Interpunktion eingreift, ansonsten greift man in Sprachgebrauch zu sehr ein oder man erstellt künstliche Texte, die es gar nicht gibt: Angenommenes Beispiel: Kraus beruft sich in einem Anschreiben auf fehlerhafte Schreibweise und gründet seine Thesen darauf, an der Stelle dürfte man natürlich nicht die fehlerhafte Schreibweise korrigieren, das Problem ist dann aber, dass wir dies konsequent tun, damit die Lesbarkeit bzw. Recherche nicht beeinträchtigt ist -> inkonsequente Vorgehensweise durch vernünftige Regeln möglichst vermeiden: sollte man bspw. den Rechtschreibfehler "dass" nicht korrigieren, da an der Stelle eigentlich ein Relativsatz gemeint ist und kein konsekutiver oder "einer strengerer Behandlung unterliegen würde"? Hier handelt es sich ja nicht um Tippfehler

Unterführungszeichen " werden aufgelöst, da wir Texte nicht standgenau wiedergeben

Datumsangaben bei Durchschlägen wie bspw. 11. November 7 sollten nicht unvollständig, also mimetisch, wiedergegeben, sondern vollständig, 11. November 1927 (nach dem wahrscheinlich nicht mehr vorhandenen Original), angegeben werden; in Edition als Hinzufügung wiedergeben?

Wie werden Dokumente mit Tabellen dargestellt? Bsp: 31.15: nicht tabellarisch, siehe 134.71: wieviele tabell. Dok. gibt es? Wiedergabe überlegen

Bei Verwendung von J anstelle des I wird der Buchstabe entsprechend angeglichen, Bsp.: Jch in Ich, ein entsprechender Hinweis und erläuternder Kommentar sollte aber im Header erfolgen. Interessanterweise tritt diese Schreibweise v.a. bei Botho Laserstein auf, der offenbar für Schriftfragen sensibilisiert zu sein schien. So benutzte Laserstein u.a. eine Schreibmaschine, die keine Monospace, sondern Schwabacher Schrift verwendete, zudem setzte er in seinen Briefen Kustoden, die eigentlich primär für den Buchdruck vorgesehen waren. Diese wenigen Merkmale weisen darauf hin, dass Laserstein auf die Lesbarkeit seiner Briefe achtete. Unter Umständen ist so auch die eigentümliche J-Schreibung zu erklären: In der Monospace ähnelt das Versal-I dem Minuskel-L; durch die J-Schreibung, die in Handschriften noch durchaus üblich war, da in der Kurrentschrift das versale J und versale I kaum zu unterscheiden waren sowie bis in das 17./18. Jahrhundert die Buchstaben äquivalent verwendet wurden, konnte deutlich zwischen Versal-I und dem kleinen I differenziert werden.

Sehr geehrter Herr Kollege! wird zu Sehr geehrter Herr Kollege! Abstand wird nicht übernommen.

Deckblätter bei Anträgen, Urteilen etc. werden stets ediert

falsche Schreibweise von Eigennamen bleibt erhalten, wenn es sich um keine Tippfehler handelt bzw. nur bei eindeutigen Tippfehlern wie Buchstabendrehern wird in den Text eingegriffen

Stempel werden in Transkribus mit eigener Textregion (tag mit element stamp) erfasst: d.h. sie werden nicht transkribiert bzw. wichtige Informationen wie Eingangsdatum im Header erfasst; Stempel werden aber ausgeschnitten, so dass jede Stempelart der Akten einsehbar ist. Arbeit könnte von den nächsten Praktikantinnen übernommen werden?

auch Beschreibungen wie Blatt 2 werden, nicht gesetzt, weil Paginierungen nicht ediert werden

Umgang mit zweispaltigen Satz? Bsp.: 70.3, besonders schwierig: 70.5 mit: news-eye können mehrere Spalten mit Text aufgezogen werden

Kustoden werden im Header kommentiert bzw. erläutert, nicht aber in der Transkription aufgenommen

Umgang mit zwei Fassungen einer Seite in einem Schriftsatz, Bsp.: 68.62, Seite 8 und Seite 9 (einmal mit handschriftlichen Korrekturen, einmal ohne) – funktioniert das hier mit Editionsrichtlinien Punkt 5 (Varianten aus Vorstufen mitgeteilt): an der betreffenden Stelle ist die Grundlage die späte Fassung; aufgenommen wird aber auch die frühe Fassung mit den Änderungen, die als Streichungen und Hinzufügungen dargestellt werden; schließlich wird es so für die betreffenden Zeilen zwei mögliche Versionen geben: den Entwurf als frühe Fassung und die Umsetzung des Entwurfs als späte Fassung; diese Lösung scheint besser als etwa die Darstellung der frühen Fassung in einem Variantenapparat, da so die Änderungen besser nachvollziehbar sind.

6.2. Textstruktur

Trennstriche usw. werden nicht kodiert, stattdessen werden, wenn möglich, Struktureinheiten angesetzt.

6.2.1. Seitenwechsel

Seitenwechsel werden mit \leq pb> markiert. Sie werden außerdem durch das Attribut n und dem entsprechenden Attributwert (z. B. 1 für die erste Seite) ausgezeichnet. Darüber hinaus werden sie mit den Bilddaten verknüpft. Dies geschieht über das Attribut facs und dem entsprechenden Verweis auf das \leq surface>-Element. Durch das Attribut facs und dem eindeutige ID.

```
<pb xml:id="uuid_01b00d2d-7002-4209-b425-a0a147ea957d"
n="1"
facs="#D_000002-002-000-facs001-1001-p001"/>
```

6.2.2. Absätze

Die größte Struktureinheit nach der Seite (<pb>) ist der Absatz: . Dieser erhält eine xml:id.

```
<lb xml:id="uuid_d3bfe9e-be54-4a0f-bfe9-9ebe54fa0f46"/>1.) Anberaumung einer Hauptverhandlung;
<lb xml:id="uuid_bf8b41d7-0095-409d-8b41-d70095a09dlc"/>2.) Ladung des <rs type="person" ref="#51602">Beschuldigten</rs>;
<lb xml:id="uuid_2f30be6b-1ca6-45fe-b0be-6b1ca615fe7d"/>3.) Verlesung des Berichtigungsschreibens und der vorgelegten
<lb xml:id="uuid_7d4a1760-6919-42fb-8a17-60691902fb9c"/>
<rs type="work" ref="#53857">Zeitungsnummer</rs>;
```

6.2.3. Abschnitte / Divisions: mehrere Textzeugen, unterschiedliche Dokumente unter einer Signatur und Rekonstruktionen Böhms

Sind mehrere Textzeugen eines Schriftstücks vorhanden und werden auch mehrere Textzeugen ediert (s. editorische Richtlinien), so wird nach dem 'primären' Textzeugen im sbody der weitere Textzeuge eingefügt und mit div ausgezeichnet. Außerdem erhält er ein type-Attribut mit dem Wert wit. Verlinkt wird der Textzeuge in div mit einem source-Attribut, das auf das entsprechende witness-Element bzw. das Faksimile verweist. Der Abschnitt selbst wird, ebenso wie der folgende, mit einer xml:id eindeutig identifizierbar gemacht.

```
<div xml:id="D_000068-044-000-wit-div-001"
type="wit" source="#D_000068-044-000-wit01"/>
```

Sind mehrere Textzeugen eines Schriftstücks vorhanden, wird aber nur einer in seiner Gänze kodiert, kann Varianz unter Textzeugen trotzdem mittels eines Variantenapparats festgehalten werden. Dabei wird an der jeweiligen Stelle im sobody ein Apparat mit sobody eingefügt. In diesem wird in sem mit den Attributen wit (verlinkt den betroffenen Textzeugen) und hand (verlinkt die betroffene Schreiberhand) ein Lemma bzw. eine präferierte Lesart festgelegt. Im folgenden srd, mit denselben Attributen wie bei sem, wird die Variante eines weiteren Textzeugen notiert.

```
<lb xml:id="uuid_55cfaeb3-0c8b-4901-8fae-b30c8b6901ee"/>Zu der Meldung, dass die Wiener

<app>
<lem wit="#D_000002-002-000-wit01"
    hand="#D_000002-002-000-hand01">Renaissancebühne</lem>
</ag wit="#D_000002-002-000-wit02"
    hand="#D_000002-002-000-hand02">Bühne</rd>
</app>
</app>
```

Wenn es zur Verwendung dieses Variantenapparats in einem Dokument kommt, muss im Header, nach sciplesc und vor springs-18 eine method und den Wert internal für location angegeben, um welche Form des Variantenapparats es sich handelt.

```
<encodingDesc>
  <variantEncoding method="parallel-segmentation"
  location="internal"/>
  </encodingDesc>
```

Wenn unterschiedliche Dokumente unter einer Signatur vorhanden sind (z. B. ein Brief und ein Protokoll), wird ebenfalls auf doc. Das Attribut source verweist gegebenenfalls auf eine weitere Signatur, die das entsprechende Schriftstück verzeichnet.

```
<div xml:id="D_000068-044-000-doc-div-001"
type="doc" source="#D_000068-044-001"/>
```

Nicht nur für die Auszeichnung mehrerer Textzeugen und unterschiedlicher Dokumente unter einer Signatur, sondern auch für Rekonstruktionen von Dokumenten durch Hermann Böhm wird div verwendet. Dies betrifft den Aktenkomplex 192, in dem einige Schriftstücke nicht ediert wurden, weil die entsprechenden Objekte fehlen. Stattdessen werden Rekonstruktionen dieser Texte von Hermann Böhm festgehalten und mit einem *type*-Attribut mit dem Wert boehm-reconstruction gekennzeichnet.

```
<div type="boehm-reconstruction">
  Ersucht um Übersendung eines Werkverzeichnisses von Karl Kraus mit Anzahl der Exemplare und Preisangabe, da der Verlag Melantrich daran int
</div>
```

6.2.4. Fehlende Objekte

Ist ein Objekt nicht (mehr) vorhanden, aber dennoch mittels einer Signatur im Aktenbestand verzeichnet, so wird im entsprechenden body> der Dokumente mit dem Hinweis "Objekt fehlt" darauf aufmerksam gemacht.

```
<body>
  D_000181-001-000: Objekt fehlt.
</body>
```

6.2.5. Zeilenfall

Zeilenfälle werden mit <<u>lb></u> markiert. Kommt es innerhalb eines Worts zu einem Zeilenfall, so wird in der folgenden Zeile dem Element <<u>lb></u> das Attribut *break* mit dem Wert no beigefügt. Insofern eine eindeutige Identifizierung von Zeilen angestrebt wird, erhält jedes <<u>lb></u>-Element außerdem eine *xml:id*.

6.2.6. Marginalien

Marginalien werden auf zwei Arten ausgezeichnet:

Marginalien ohne Text: Kodierung mit <metamark>, dem Attribut function und dem Wert marginal. Mittels hand wird auf die entsprechende Schreiberhand verwiesen, mittels rend auf die Position der Marginalie auf dem Objekt.

```
Abschrift.<metamark function="marginal" hand="#D_000001-001-000-hand01" rend="marginRight"/>
```

Marginalien mit Text: Kodierung mittels <note>, dem Attribut type und dem Wert marginal. Mittels hand wird auf die entsprechende Schreiberhand verwiesen, mittels rend auf die Position der Marginalie auf dem Objekt.

```
Abschrift.<note type="marginal"
hand="#D_000001-001-000-hand01" rend="marginRight">1933</note>
```

6.3. Typografische Hervorhebungen

Grundsätzlich werden typographische Auszeichnungen mit hi> ausgezeichnet. Je nachdem, welche Hervorhebung vorliegt, kommen unterschiedliche Werte für rend zum Einsatz. Handelt es sich um eine Unterstreichung, so wird der Wert underlined angegeben. Liegt eine Sperrung vor, bekommt rend den Wert spaced. Fette Stellen werden mit bold ausgezeichnet, kursive mit italics.

```
<hi rend="spaced">Privatanklage</hi>
```

Liegt eine handschriftliche Hervorhebung vor, so kann die entsprechende Schreiberhand im Attribut hand verlinkt werden.

```
<hi rend="underlined"
hand="#D_000001-001-000-hand01">Anträge</hi>
```

6.4. Eingriffe in den Text

Semantisch relevante Sofort- und Spätkorrekturen werden auf unterschiedliche Weisen ausgezeichnet:

Einfügungen werden mit <add> ausgezeichnet. Handelt es sich um eine handschriftliche Einfügung, so wird das Attribut hand mit Verweis auf die entsprechende Schreiberhand ebenso verzeichnet.

```
Ein <add hand="#D_000001-001-000-hand01">neuer</add> Antrag.
```

Tilgungen werden mit ausgezeichnet. Handelt es sich um eine handschriftliche Tilgung, so wird das Attribut hand mit Verweis auf die entsprechende Schreiberhand ebenso verzeichnet.

```
Ein <del hand="#D_000001-001-000-hand01">alter</del> Antrag.
```

Ersetzungen werden mit <a box ausgezeichnet. Handelt es sich um eine handschriftliche Ersetzung, so wird das Attribut hand mit Verweis auf die entsprechende Schreiberhand ebenso verzeichnet.

Bestandteile von Umstellungen werden mit seg mit dem type transposition ausgezeichnet. Jedes seg-Element erhält dabei eine xml:id. Die Umstellung selbst wird mit dem Element semanzeichnet, welches das Attribut function mit dem Wert transposition und einer Verlinkung auf das entsprechende seg-Element in target enthält. Handelt es sich um eine handschriftliche Umstellung, so wird die entsprechende Schreiberhand mit Hilfe des Attributs hand angeführt.

```
<seg type="transposition"
    xml:id="D_00001-001-000_seg001">Der</seg>
<metamark function="transposition"
    hand="#D_000001-001-000-hand01" target="#D_000001-001-000_seg001"/>
    seg type="transposition"
    xml:id="D_000001-001-000_seg002">Antrag</seg>
<metamark function="transposition"
    hand="#D_000001-001-000-hand01" target="#D_000001-001-000_seg002"/>
    seg type="transposition"
    xml:id="D_000001-001-000-hand01" target="#D_000001-001-000_seg002"/>
    seg type="transposition"
    xml:id="D_000001-001-000_seg003">ist</seg>
<metamark function="transposition"
    hand="#D_000001-001-000-hand01" target="#D_000001-001-000_seg003"/>
    seg type="transposition"
```

```
xml:id="D_000001-001-000_seg004">neu</seg>
<metamark function="transposition"
hand="#D_000001-001-000-hand01" target="#D_000001-001-000_seg004"/>.
```

Im Header wird sodann in die specified-besc listTranspose mit der betroffenen Umstellung eingefügt. Im Element stranspose mit einer möglichen Verlinkung auf eine Schreiberhand in hand befinden sich sodann specified-besc stranspose mit der betroffenen Umstellung eingefügt. Im Element stranspose mit der betroffenen Umstellung eingefügt. Im Element stranspose mit der betroffenen Umstellung eingefügt. Im Element stranspose mit der betroffenen Umstellung eingefügt. Im Element stranspose mit einer möglichen Verlinkung auf eine Schreiberhand in hand befinden sich sodann specified-bes

Getilgte bzw. zurückgenommene Überarbeitungen werden mit <u>restore</u>> ausgezeichnet. Handelt es sich um eine handschriftliche Korrektur, so wird die entsprechende Schreiberhand über das Attribut *hand* hinzugefügt.

Sind Korrekturen innerhalb von Korrekturen vorhanden, etwa eine Tilgung in einer Hinzufügung (in <add>), so werden die Elemente entsprechend geschachtelt. Davon ausgenommen ist die nicht TEI-konforme Schachtelung von subst> in subst>.

Leerstellen werden mit ≤gap≥ gekennzeichnet. Der Grund für die Leerstelle in der digitalen Edition wird in *reason* angegeben. Als Attributwerte stehen cancelled (abgebrochen), deleted (getilgt), editorial (aus editorischen Gründen nicht übertragen) und illegible (unleserlich) zur Auswahl. Im Attribut *extent* kann das Ausmaß der Leerstelle dokumentiert werden. Die Werte sind in diesem Fall nicht klar definiert, da beispielsweise several-characters neben three-words oder one-line vorkommen kann.

```
Dieser Antrag <gap reason="illegible" extent="1-word"/> neu.
```

Komplexe Korrekturen werden mit Hilfe eines Pointers annotiert. Haben wir beispielsweise den Satzausschnitt "dessen Besprechung über das Kriegsmanifest" vorliegen, wobei "Besprechung über das" nachträglich durchgestrichen und mit der handschriftlichen Einfügung "Kritik an dessen Stelle" ersetzt wurde, hier aber wieder "Kritik an dessen" getilgt und die Streichung von "über das" zurückgenommen wurde, können wir den Ausschnitt wie folgt kodieren:

Handelt es sich zwar um keine handschriftliche Korrektur, jedoch sehr wohl um eine handschriftliche Notiz, dann wird diese mit <note> und einem Verweis auf die entsprechende Schreiberhand mittels hand ausgezeichnet.

<note hand="#D_000001-001-000-hand01">Der Antrag liegt nicht vor.</note>

7. Annotation und semantische Erschließung

7.1. Verweise auf Entitäten

Gewisse Entitäten im Look body> werden mittels Look body> werden mittels Look body> werden mittels und entsprechenden von Institutionen. Orte werden mit place kodiert, Werke mit work und Gesetzestexte mit law. Bei mit dem work gibt es ferner Untergruppen in Form von work gibt es ferner Untergruppen in Form von work gibt es ferner Untergruppen in Form von work gibt es ferner Untergruppen in Form von work gibt es ferner Untergruppen in Form von <

```
<rs type="work" ref="#53851">Der Wiener Tag</rs>
```

Durch das ref-Attribut wird die Entität außerdem mit dem entsprechenden Datensatz in der PMB bzw. der "Fackel", dem entsprechenden Dokument in den Rechtsakten oder ALEX verlinkt.

Personal- und Possessivpronomen werden nicht ausgezeichnet. Ausschlaggebend sind Namen bzw. Substantive. Ebenso nicht näher bestimmt werden Namen literarischer Figuren.

Im <body> selbst sind also alle erwähnten Personen und Institutionen ausgezeichnet. In die <particDesc> werden jedoch nur die zentral beteiligten übernommen.

7.2. Zitate, wörtliche Reden

Zitate werden mit <quote> ausgezeichnet, insofern sie in Anführungszeichen stehen. Diese wurden im Zuge der Transkription normalisiert. Die <quote>-Elemente erhalten eine xml:id sowie einen Verweis auf den Ursprung des Zitats mittels source.

```
"<quote xml:id="uuid_3ddbac9d-2d25-4017-a98b-44dbc216608c"
source="https://fackel.oeaw.ac.at/f/908,007">groteske Bemerkung</quote>"
```

Handelt es sich um eine wörtliche Rede, so wird das Element ≤q≥ mit dem Attribut *type* und dem Wert spoken herangezogen. Ist der_die Sprecher_in der Aussage identifizierbar, wird sie mit dem *who*-Attribut verlinkt.

```
"<q type="spoken" who="#38909">hineingebracht</q>"
```

7.3. Notizen

Das Element <note> wird nicht nur in der <correspDesc> für die Auszeichnung von Diktatsiglen und Betreffen herangezogen, sondern, wie schon erwähnt, auch für Marginalien. Darüber hinaus werden Notizen der Kanzlei Oskar Samek mit <note>, dem Attribut type mit dem Wert paratext und dem Attribut resp mit dem Wert law-firm verzeichnet.

```
<note type="paratext" resp="law-firm">Betrifft: <rs type="person" ref="#11988">Kraus</rs> - <rs type="person" ref="#11910">Kerr</rs>
<ld>xml:id="uuid_fba404e0-86b9-42fb-a404-e086b9a2fb21"/>expediert am 3. Jänner 1927.
</note>
```

8. IDs

IDs bzw. Identifier werden wie folgt vergeben:

Die Dokumente selbst erhalten eine ID in der Form D_xxxxxx-xxx.xml, wobei die erste Ziffernkombination den Fall bezeichnet (vgl. die IDs für Fälle in der Form C_xxxxx), die zweite das Dokument und die dritte gegebenenfalls eine Beilage.

```
<TEI xml:base="https://id.acdh.oeaw.ac.at/legalkraus"
xml:id="D_000112-029-000.xml"
prev="https://id.acdh.oeaw.ac.at/legalkraus/D_000112-028-000.xml"
next="https://id.acdh.oeaw.ac.at/legalkraus/D_000112-030-000.xml" xmlns="http://www.tei-c.org/ns/1.0"/>
```

Als Attribute des Elements <TEI> werden außerdem die *xml:base*, der Namespace (*xmlns*, im Beispiel nicht vorhanden) sowie *prev* und *next* angeführt. Letztere Attribute verweisen auf das vorangehende sowie das folgende Dokument.

<u><witness></u>-Elemente, also Textzeugen, bekommen eine ID in der Form D_xxxxxx-xxx-xxx-witxx. Der ID des Dokuments wird also "witxx" hinzugefügt.

```
<witness xml:id="D_00002-002-000-wit01"
facs="#D_00002-002-000-facs001"/>
```

Die IDs der <u><facsimile></u>-Elemente ergibt sich ebenso aus der ID des Dokuments und einem Zusatz in der Form "facsxxx". Dieser ID wird noch ein weiterer Zusatz in der Form "lxxx" für <u><surfaceGrp></u>-Elemente hinzugefügt. Für die ID eines <surface>-Elements wird die ID der <surfaceGrp> noch einmal erweitert um "pxxx".

Folgende Elemente erhalten UUIDs: $\leq p >$, $\leq p >$ (zusätzlich zur Seitenzählung in n), $\leq lb >$, $\leq quote >$ und $\leq stamp >$.

```
<lb xml:id="uuid_cb24b124-dde5-4621-a4b1-24dde5762193"/>In vorzüglicher Hochachtung
```

9. TEI-Modifikation

9.1. Elements

9.1.1. <TEI>

TEI> (TEI document) contains a single TEI-conformant document, combining a single TEI header with one or more members of the model.resource class. Multiple ">YEI> elements may be combined within a ">YEI> (or <teiCorpus>) element. [4. Default Text Structure 15.1. Varieties of Composite Text]

9.1.5. <address>

<address> (address) contains a postal address, for example of a publisher, an organization, or an individual. [3.6.2. Addresses 2.2.4. Publication, Distribution, Licensing, etc. 3.12.2.4. Imprint, Size of a Document, and Reprint Information] Module core Attributes Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) model.addressLike model.publicationStmtPart.detail Member of Contained by analysis: cl phr s span core: add date del editor hi name note p pubPlace publisher q quote ref rs street term title header: change classCode correspAction creation handNote language licence publicationStmt linking: ab seg msdescription: accMat objectType stamp namesdates: country orgName persName roleName settlement textcrit: lem rdg witness transcr: metamark restore May contain analysis: interp interpGrp span spanGrp core: gap lb name note noteGrp pb postCode rs street header: idno namesdates: country orgName persName roleName settlement textcrit: app transcr: listTranspose metamark This element should be used for postal addresses only. Within it, the generic element <ad-Note drLine> may be used as an alternative to any of the more specialized elements available from the model.addrPart class, such as <street>, <postCode> etc. **Example** Using just the elements defined by the core module, an address could be represented as follows: <street>via Marsala 24</street> <postCode>40126</postCode> <name>Bologna</name>
<name>Italy</name> </address> **Example** When a schema includes the names and dates module more specific elements such as country or settlement would be preferable over generic <name>: <street>via Marsala 24</street> <postCode>40126</postCode> <settlement>Bologna</settlement> <country>Italy</country> <address> **Example** <addrLine>Computing Center, MC 135</addrLine> <addrLine>P.O. Box 6998</addrLine>
<addrLine>Chicago, IL 60680</addrLine> <addrLine>USA</addrLine> </address> **Example** <address> <country key="FR"/> <settlement type="city">Lyon</settlement>
<postCode>69002</postCode> <district type="arrondissement">IIème</district> <district type="quartier">Perrache</district> <num>30</num>, Cours de Verdun</street> </address>

9.1.6. <app>

<app>(apparatus entry) contains one entry in a critical apparatus, with an optional lemma and usually one or more readings or notes on the relevant passage. [12.1.1. The Apparatus Entry]

or notes on the relevant	t passage. [12.1.1. Th	e Apparatus Entry]	
Module	textcrit	textcrit	
Attributes	dition (@ren @copyOf, @ (@facs)) (att	d, @style, @rendit enext, @prev, @ex	@n, @xml:lang, @xml:base, @xml:space) (att.global.ren- ion)) (att.global.linking (@corresp, @synch, @sameAs, clude, @select)) (att.global.analytic (@ana)) (att.global.facs change)) (att.global.responsibility (@cert, @resp)) (att.glob- type, @subtype)
	type		classifies the variation contained in this element according to some convenient typology.
		Derived from	att.typed
		Status	Optional
		Datatype	teidata.enumerated
	from	identifies the	e beginning of the lemma in the base text.
		Status	Optional
		Datatype	teidata.pointer
		Note	This attribute should be used when either the double-end point method of apparatus markup, or the location-referenced method with a URL rather than canonical reference, are used.
	to	identifies the	e endpoint of the lemma in the base text.
		Status	Optional
		Datatype	teidata.pointer
		Note	This attribute is only used when the double-end point method of apparatus markup is used, when the encoded apparatus is not embedded <i>in-line</i> in the base-text.
	loc	,	(location) indicates the location of the variation, when the location-referenced method of apparatus markup is used.
		Status	Optional
		Datatype	1-# occurrences of teidata.word separated by whitespace
		Note	This attribute is used only when the location-referenced encoding method is used. It supplies a string containing a canonical reference for the passage to which the variation applies.

Note	This element should be used for deletion of shorter sequences of text, typically single words or phrases. The <delspan> element should be used for longer sequences of text, for those</delspan>

containing structural subdivisions, and for those containing overlapping additions and deletions

The text deleted must be at least partially legible in order for the encoder to be able to transcribe it (unless it is restored in a <supplied> tag). Illegible or lost text within a deletion may be marked using the <gap> tag to signal that text is present but has not been transcribed, or is no longer visible. Attributes on the <gap> element may be used to indicate how much text is omitted, the reason for omitting it, etc. If text is not fully legible, the <un-clear> element (available when using the additional tagset for transcription of primary sources) should be used to signal the areas of text which cannot be read with confidence in a similar way.

Degrees of uncertainty over what can still be read, or whether a deletion was intended may be indicated by use of the <certainty> element (see 21. Certainty, Precision, and Responsibility).

There is a clear distinction in the TEI between <a

	tween these and other related elements used in detailed transcription.
Example	<pre><1> <del rend="overtyped">Mein Frisch <del rend="overstrike" type="primary">schwebt</pre>
Example	<pre><del rend="overstrike"> <gap quantity="5" reason="illegible" unit="character"></gap> </pre>

May contain	Empty element
Note	By convention, \leq lb \geq elements should appear at the point in the text where a new line starts. The n attribute, if used, indicates the number or other value associated with the text between this point and the next \leq lb \geq element, typically the sequence number of the line within the page, or other appropriate unit. This element is intended to be used for marking actual line breaks on a manuscript or printed page, at the point where they occur; it should not be used to tag structural units such as lines of verse (for which the $<$ 1 $>$ element is available) except in circumstances where structural units cannot otherwise be marked.

	The <i>type</i> attribute may be used to characterize the line break in any respect. The more specialized attributes <i>break</i> , <i>ed</i> , or <i>edRef</i> should be preferred when the intent is to indicate whether or not the line break is word-breaking, or to note the source from which it derives.
Example	This example shows typographical line breaks within metrical lines, where they occur at different places in different editions: <pre></pre>
	<pre><1>Of that Forbidden Tree, whose<1b ed="1667 1674"/> mortal tast<!--1--> <1>Brought Death into the World,<1b ed="1667"/> and all<1b ed="1674"/> our woe,<!--1--></pre>
Example	This example encodes typographical line breaks as a means of preserving the visual appearance of a title page. The <i>break</i> attribute is used to show that the line break does not (as elsewhere) mark the start of a new word.
	<pre><titlepart> <lb></lb>With Additions, ne-<lb break="no"></lb>ver before Printed. </titlepart></pre>
Content model	<pre><content> <empty></empty> </content></pre>
Schema Declaration	element lb { att.global.attributes, att.typed.attributes, att.edition.attributes, att.spanning.attributes, att.breaking.attributes, empty }

9.1.36. <lem>

(lem» (lemma) contains the es]	lemma, or base text, of a textual variation. [12.1. The Apparatus Entry, Readings, and Witness-
Module	textcrit
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.textCritical (@type, @cause, @varSeq, @require) (att.written (@hand)) att.witnessed (@wit)
Contained by	textcrit: app

Note	The term <i>lemma</i> is used in text criticism to describe the reading given in the main text, which may be used as a heading in the apparatus itself. This usage connects it to mathematics (where a lemma is a proven proposition used as a step in a proof, a "given") and natural-language processing (where a lemma is the dictionary headword associated with an inflected form in the running text).

May contain	textcrit: listWit witness	
Note	May contain a series of witness or listWit> elements. The provision of a listWit> element simplifies the automatic processing of the apparatus, e.g. the reconstruction of the readings for all witnesses from an exhaustive apparatus. Situations commonly arise where there are many more or less fragmentary witnesses, such that there may be quite distinct groups of witnesses for different parts of a text or collection of texts. Such groups may be given separately, or nested within a single listWit> element at the beginning of the file listing all the witnesses, partial and complete, for the text, with the	

	attestation of fragmentary witnesses indicated within the apparatus by use of the <wits-tart> and <witend> elements described in section 12.1.5. Fragmentary Witnesses. Note however that a given witness can only be defined once, and can therefore only appear within a single <<u>listWit></u> element.</witend></wits-tart>
Example	<pre><listwit> <witness xml:id="HL26">Ellesmere, Huntingdon Library 26.C.9</witness> <witness xml:id="PN392">Hengwrt, National Library of Wales, Aberystwyth, Peniarth 392D</witness> <witness xml:id="RP149">Bodleian Library Rawlinson Poetic 149 (see further <ptr target="#MSRP149"></ptr>)</witness> </listwit></pre>

Example	In the following example, the translator has supplied a footnote containing an explanation of the term translated as "painterly": And yet it is not only

```
in the great line of Italian renaissance art, but even in the
                                          painterly <note place="bottom" type="gloss
                                          resp="#MDMH">
                                          <term xml:lang="de">Malerisch</term>. This word has, in the German, two
                                          distinct meanings, one objective, a quality residing in the object, the other subjective, a mode of apprehension and creation. To avoid confusion, they have been distinguished in English as
                                         <mentioned>picturesque</mentioned> and
                                          <mentioned>painterly</mentioned> respectively.
                                          </note> style of the
                                          Dutch genre painters of the seventeenth century that drapery has this
                                          psychological significance.
                                         <!-- elsewhere in the document --> <respStmt xml:id="MDMH">
                                          <re>>resp>translation from German to English</resp>
                                          <name>Hottinger, Marie Donald Mackie</name>
                                     For this example to be valid, the code MDMH must be defined elsewhere, for example by
                                     means of a responsibility statement in the associated TEI header.
Example
                                     The global n attribute may be used to supply the symbol or number used to mark the note's
                                     point of attachment in the source text, as in the following example:
                                         Mevorakh b. Saadya's mother, the matriarch of the family during the second half of the eleventh century, <note n="126" anchored="true"> The alleged mention of Judah Nagid's mother in a letter from 1071 is, in fact, a reference to
                                          Judah's children; cf. above, nn. 111 and 54. </note> is well known from Geniza documents
                                          published by Jacob Mann.
                                     However, if notes are numbered in sequence and their numbering can be reconstructed auto-
                                     matically by processing software, it may well be considered unnecessary to record the note
                                     numbers.

9.1.52. <*pb*>

<pb><pb>(page beginning)</pb></pb>) marks the beginning of a new page in a paginated document. [3.11.3. Milestone Elements]	
Module	core	
Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.typed (@type, @subtype) att.edition (@ed, @edRef) att.spanning (@spanTo) att.breaking (@break)	
Member of	model.milestoneLike	
Contained by	analysis: cl m phr s span w core: add address date del editor hi name note p pubPlace publisher q quote ref rs street term title header: change classCode handNote language licence linking: ab seg msdescription: accMat objectType stamp namesdates: country org orgName persName person roleName settlement textcrit: lem rdg textstructure: body div text transcr: metamark restore subst surface surfaceGrp	
May contain	Empty element	
Note	A \leq pb \geq element should appear at the start of the page which it identifies. The global n attribute indicates the number or other value associated with this page. This will normally be the page number or signature printed on it, since the physical sequence number is implicit in the presence of the \leq pb \geq element itself. The $type$ attribute may be used to characterize the page break in any respect. The more specialized attributes $break$, ed , or $edRef$ should be preferred when the intent is to indicate whether or not the page break is word-breaking, or to note the source from which it derives.	
Example	Page numbers may vary in different editions of a text. <pb ed="ed2" n="145"></pb> Page 145 in edition "ed2" starts here <pb ed="ed1" n="283"></pb>	

```
<!-- Page 283 in edition "ed1" starts here--> ... 
Example
                                 A page break may be associated with a facsimile image of the page it introduces by means of
                                 the facs attribute
                                     <body>
                                     <!-- ... -->

<pb n="2" facs="page2.png"/>
<!-- similarly, for page 2 -->
<!-- ... -->

                                     </body>
Content model
                                     <content> <empty/>
                                     </content>
Schema Declaration
                                     element pb
                                        att.global.attributes,

		Status	Optional	

		Datatype	1-# occurrences of teidata.sex separated by whitespace	
		Note	Values for this attribute may be locally defined by a project, or may refer to an external standard, such as vCard's sex property http://microformats.org/wiki/gender-formats (in which M indicates male, F female, O other, N none or not applicable, U unknown), or the often used ISO 5218:2004 Representation of Human Sexes http://standards.iso.org/ittf/PubliclyAvailableStandards/c036266_ISO_IEC_5218_2004(E_F).zip (in which O indicates unknown; 1 male; 2 female; and 9 not applicable, although the ISO standard is widely considered inadequate); cf. CETH's Recommendations for Inclusive Data Collection of Trans People http://transhealth.ucsf.edu/trans?page=lib-data-collection.	
	age	specifies an	age group for the person.	
		Status	Optional	
		Datatype	teidata.enumerated	
		Note	Values for this attribute may be locally defined by a project, using arbitrary keywords such as infant, child, teen, adult, or senior, each of which should be associated with a definition. Such local definitions will typically be provided by a <vallist> element in the project schema specification.</vallist>

Attributes	Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.coordinated (@start, @ulx, @uly, @lrx, @lry, @points) att.declaring (@decls) att.typed (@type, @subtype) attachment describes the method by which this surface is or was connected to the main surface Status Optional
	Datatype <u>teidata.enumerated</u>
	Sample val- glued ues include: glued in place
	pinned pinned or stapled in place
	sewn sewn in place
	flipping indicates whether the surface is attached and folded in such a way as to provide two writing surfaces Status Optional
	Datatype teidata.truthValue
Contained by	transcr: facsimile surface surfaceGrp
May contain	analysis: interp interpGrp span spanGrp core: gap graphic lb note noteGrp pb textcrit: app transcr: listTranspose metamark surface surfaceGrp
Note	The <surface> element represents any two-dimensional space on some physical surface forming part of the source material, such as a piece of paper, a face of a monument, a bill-board, a scroll, a leaf etc. The coordinate space defined by this element may be thought of as a grid lrx - ulx units wide and uly - lry units high. The <surface> element may contain graphic representations or transcriptions of written zones, or both. The coordinate values used by every <zone> element contained by this element are to be understood with reference to the same grid. Where it is useful or meaningful to do so, any grouping of multiple <surface> elements may be indicated using the <surfacegrp> element.</surfacegrp></surface></zone></surface></surface>
Example	<facsimile> <surface lrx="200" lry="300" ulx="0" uly="0"> <graphic url="Bovelles-49r.png"></graphic> </surface> </facsimile>
Content model	<content> <sequence></sequence></content>

9.1.83. <surfaceGrp>

<surfaceGrp> defines any kind of useful grouping of written surfaces, for example the recto and verso of a single leaf, which the encoder wishes to treat as a single unit. [11.1. Digital Facsimiles]

which the encoder wishes	s to treat as a single unit. [11.1. Digital Facsimiles]

9.1.85. <term>

<term> (term) contains a single-word, multi-word, or symbolic designation which is regarded as a technical term. [3.4.1. Terms and Glosses] Module core Attributes Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs $(@facs))\ (\underline{att.global.change}\ (@change))\ (\underline{att.global.responsibility}\ (@cert,\ @resp))\ (\underline{att.global.responsibility}\ (\underline{att.global.responsibility}$ al.source (@source)) att.declaring (@decls) att.pointing (@targetLang, @target, @evaluate) att.typed (@type, @subtype) att.canonical (@key, @ref) att.sortable (@sortKey) att.cReferencing (@cRef) Member of model.emphLike Contained by analysis: cl phr s span core: add date del editor hi name note p pubPlace publisher q quote ref rs street term title header: change classCode creation handNote keywords language licence linking: ab seg msdescription: accMat objectType stamp namesdates: <u>country orgName persName roleName settlement</u> textcrit: lem rdg witness transcr: metamark restore analysis: c cl interp interpGrp m pc phr s span spanGrp w May contain core: add address date del gap graphic hi lb name note noteGrp pb ptr q quote ref rs term tiheader: idno linking: seg msdescription: objectType stamp namesdates: country orgName persName roleName settlement textcrit: app transcr: <u>listTranspose</u> <u>metamark</u> <u>restore</u> <u>subst</u> character data When this element appears within an <index> element, it is understood to supply the form Note under which an index entry is to be made for that location. Elsewhere, it is understood simply to indicate that its content is to be regarded as a technical or specialised term. It may be associated with a <gloss> element by means of its ref attribute; alternatively a <gloss> element may point to a <term> element by means of its target attribute. In formal terminological work, there is frequently discussion over whether terms must be atomic or may include multi-word lexical items, symbolic designations, or phraseological

	units. The <term> element may be used to mark any of these. No position is taken on the philosophical issue of what a term can be; the looser definition simply allows the <term> element to be used by practitioners of any persuasion. As with other members of the att.canonical class, instances of this element occuring in a text may be associated with a canonical definition, either by means of a URI (using the ref attribute), or by means of some system-specific code value (using the key attribute). Because the mutually exclusive target and cRef attributes overlap with the function of the ref attribute, they are deprecated and may be removed at a subsequent release.</term></term>
Example	A computational device that infers structure from grammatical strings of words is known as a <term>parser</term> , and much of the history of NLP over the last 20 years has been occupied with the design of parsers.
Example	We may define <term rend="sc" xml:id="TDPV1">discoursal point of view</term> as <gloss target="#TDPV1">the relationship, expressed through discourse structure, between the implied author or some other addresser, and the fiction.</gloss>
Example	We may define <term ref="#TDPV2" rend="sc">discoursal point of view</term> as <gloss xml:id="TDPV2">the relationship, expressed through discourse structure, between the implied author or some other addresser, and the fiction.</gloss>
Example	We discuss Leech's concept of <term ref="myGlossary.xml#TDPV2" rend="sc">discoursal point of view</term> below
Content model	<content> <macroref key="macro.phraseSeq"></macroref> </content>

The Title Statement 2.2.5.</th></tr><tr><td>Module</td><td>core</td></tr><tr><td>Attributes</td><td>Attributes att.global (@xml:id, @n, @xml:lang, @xml:base, @xml:space) (att.global.rendition (@rend, @style, @rendition)) (att.global.linking (@corresp, @synch, @sameAs, @copyOf, @next, @prev, @exclude, @select)) (att.global.analytic (@ana)) (att.global.facs (@facs)) (att.global.change (@change)) (att.global.responsibility (@cert, @resp)) (att.global.source (@source)) att.canonical (@key, @ref) att.datable (@calendar, @period) (att.datable.w3c (@when, @notBefore, @notAfter, @from, @to)) (att.datable.iso (@when-iso, @notBefore-iso, @notAfter-iso, @from-iso, @to-iso)) (att.datable.custom) (@when-custom, @notBefore-custom, @notAfter-custom, @from-custom, @to-custom, @datingPoint, @datingMethod)) att.typed (type, @subtype) type classifies the title according to some convenient typology.</td></tr><tr><td></td><td>Derived <u>att.typed</u> from</td></tr><tr><td></td><td>Status Optional</td></tr><tr><td></td><td>Datatype <u>teidata.enumerated</u></td></tr><tr><td></td><td>Sample val- main ues include: main title sub</td></tr><tr><td></td><td>(subordinate) subtitle, title of part</td></tr><tr><td></td><td>(alternate) alternate title, often in another lan-
guage, by which the work is also known</td></tr><tr><td></td><td>short abbreviated form of title</td></tr><tr><td></td><td>de- sc (descriptive) descriptive paraphrase of the work functioning as a title</td></tr><tr><td></td><td>Note This attribute is provided for convenience in analysing titles and processing them according to their type; where such specialized processing is not necessary, there is no need for such analysis, and the entire title, including subtitles and any parallel titles, may be enclosed within a single <title> element.</td></tr></tbody></table></title>
--

		bibliographic level for a title, that is, whether it identifies an journal, series, or unpublished material. Optional teidata.enumerated s a (analytic) the title applies to an analytic item, such as an article, poem, or other work published as part of a larger item. m (monographic) the title applies to a monograph such as a book or other item considered to be a distinct publication, including single volumes of multi-volume works j (journal) the title applies to any serial or periodical publication such as a journal, magazine, or newspaper
		s (series) the title applies to a series of otherwise distinct publications such as a collection u (unpublished) the title applies to any unpublished material (including theses and dissertations unless published by a commercial press)
	Note	The level of a title is sometimes implied by its context: for example, a title appearing directly within an <anallytic> element is <i>ipso facto</i> of level 'a', and one appearing within a <series> element of level 's'. For this reason, the <i>level</i> attribute is not required in contexts where its value can be unambiguously inferred. Where it is supplied in such contexts, its value should not contradict the value implied by its parent element.</series></anallytic>

9.2. Model classes

9.2.1. model.addrPart

model.addrPart groups elements such as names or postal codes which may appear as part of a postal address. [3.6.2. Addresses]

Module tei

U	sed by	address
N		model.nameLike[model.nameLike.agent[name_orgName_persName] model.offsetLike model.persNamePart[roleName] model.placeStateLike[model.placeNamePart[country_settle-ment]] idno rs] postCode_street

9.2.2. model.addressLike

model.addressLike groups elements used to represent a postal or email address. [1. The TEI Infrastructure]		
Module	tei	
Used by	model.correspActionPart model.pPart.data	
Members	<u>address</u>	

9.2.3. model.attributable

model.attributable groups elements that contain a word or phrase that can be attributed to a source. [3.3.3. Quotation 4.3.2. Floating Texts]	
Module	tei
Used by	macro.phraseSeq model.inter
Members	model.quoteLike[quote]

9.2.4. model.availabilityPart

model.availabilityPart groups elements such as licences and paragraphs of text which may appear as part of an availability statement [2.2.4. Publication, Distribution, Licensing, etc.]	
Module	tei
Used by	availability
Members	licence

9.2.5. model.common

model.common groups common chunk- and inter-level elements. [1.3. The TEI Class System]	
Module	tei
Used by	body div
Members	$\frac{model.divPart[model.lLike\ model.pLike[ab\ p]]\ model.inter[model.attributable[model.quote-Like[quote]]\ model.biblLike\ model.egLike\ model.labelLike\ model.listLike[listOrg\ listPerson\ listWit]\ model.oddDecl\ model.stageLike]\ q}$
Note	This class defines the set of chunk- and inter-level elements; it is used in many content models, including those for textual divisions.

9.2.6. model.correspActionPart

model.correspActionPart groups elements which define the parts (usually names, dates and places) of one action related to the correspondence.	
Module	tei
Used by	correspAction
Members	model.addressLike[address] model.dateLike[date] model.nameLike[model.nameLike.a-gent[name_orgName_persName] model.offsetLike model.persNamePart[roleName] model.placeStateLike[model.placeNamePart[country_settlement]] idno rs] note noteGrp

$9.2.7.\ model. corresp Desc Part$

model.correspDescPart groups together metadata elements for describing correspondence	
Module	tei
Used by	correspDesc
Members	correspAction note noteGrp

9.2.8. model.dateLike

model.dateLike groups elements containing temporal expressions. [3.6.4. Dates and Times 13.4. Dates]	
Module	tei
Used by	model.correspActionPart model.pPart.data
Members	date

9.2.9. model.divBottom

model.divBottom groups elements appearing at the end of a text division. [4.2. Elements Common to All Divisions]	
Module	tei
Used by	body div
Members	model.divBottomPart model.divWrapper

9.2.10. model.divLike

model.divLike groups elements used to represent un-numbered generic structural divisions.	
Module	tei
Used by	body div lem rdg
Members	<u>div</u>

9.2.11. model.divPart

model.divPart groups paragraph-level elements appearing directly within divisions. [1.3. The TEI Class System]	
Module	tei
Used by	lem macro.specialPara model.common rdg
Members	model.lLike model.pLike[ab p]
Note	Note that this element class does not include members of the model.inter class, which can appear either within or between paragraph-level items.

9.2.12. model.divTop

model.divTop groups elements appearing at the beginning of a text division. [4.2. Elements Common to All Divisions]	
Module	tei
Used by	body div
Members	model.divTopPart[model.headLike] model.divWrapper

9.2.13. model.divTopPart

model.divTopPart groups elements which can occur only at the beginning of a text division. [4.6. Title Pages]	
Module	tei
Used by	model.divTop
Members	model.headLike

9.2.14. model.emphLike

model.emphLike groups phrase-level elements which are typographically distinct and to which a specific function can be attributed. [3.3. Highlighting and Quotation]	
Module	tei
Used by	model.highlighted model.limitedPhrase
Members	term title

9.2.15. model.encodingDescPart

model.encodingDescPart groups elements which may be used inside encodingDesc and appear multiple times.

Module	tei
Used by	encodingDesc
Members	variantEncoding

9.2.16. model.global

model.global groups elements which may appear at any point within a TEI text. [1.3. The TEI Class System]	
Module	tei
Used by	address body date div lem m macro.paraContent macro.phraseSeq macro.phraseSeq.limited macro.specialPara person rdg surface surfaceGrp text w
Members	model.global.edit[app gap] model.global.meta[interp interpGrp listTranspose span spanGrp] model.milestoneLike[lb pb] model.noteLike[note noteGrp] metamark

9.2.17. model.global.edit

model.global.edit groups globally available elements which perform a specifically editorial function. [1.3. The TEI Class System]	
Module	tei
Used by	model.global
Members	арр дар

9.2.18. model.global.meta

model.global.meta groups globally available elements which describe the status of other elements. [1.3. The TEI Class System]	
Module	tei
Used by	model.global
Members	interp interpGrp listTranspose span spanGrp
Note	Elements in this class are typically used to hold groups of links or of abstract interpretations, or by provide indications of certainty etc. It may find be convenient to localize all metadata elements, for example to contain them within the same divison as the elements that they relate to; or to locate them all to a division of their own. They may however appear at any point in a TEI text.

9.2.19. model.graphicLike

model.graphicLike groups elements containing images, formulae, and similar objects. [3.10. Graphics and Other Non-textual Components]	
Module	tei
Used by	facsimile model.phrase surface
Members	graphic

9.2.20. model.hiLike

model.hiLike groups phrase-level elements which are typographically distinct but to which no specific function can be attributed. [3.3. Highlighting and Quotation]	
Module	tei
Used by	m model.highlighted model.limitedPhrase w
Members	<u>hi</u> q

9.2.21. model.highlighted

model.highlighted groups phrase-level elements which are typographically distinct. [3.3. Highlighting and Quotation]	
Module	tei
Used by	model.phrase
Members	model.emphLike[term title] model.hiLike[hi q]

9.2.22. model.inter

model.inter groups elements which can appear either within or between paragraph-like elements. [1.3. The TEI Class System]	
Module	tei
Used by	lem macro.paraContent macro.specialPara model.common rdg witness
Members	<u>model.attributable[model.quoteLike[quote]]</u> model.biblLike model.egLike model.labelLike <u>model.listLike[listOrg listPerson listWit]</u> model.oddDecl model.stageLike

9.2.23. model.limitedPhrase

model.limitedPhrase groups phrase-level elements excluding those elements primarily intended for transcription of existing sources. [1.3. The TEI Class System]	
Module	tei
Used by	creation macro.phraseSeq.limited witness
Members	model.emphLike[term title] model.hiLike[hi q] model.pPart.data[model.addressLike[address] model.dateLike[date] model.measureLike model.nameLike[model.nameLike.agent[name orgName persName] model.offsetLike model.persNamePart[roleName] model.placeStateLike[model.placeNamePart[country settlement]] idno rs]] model.pPart.editorial[subst] model.pPart.msdesc[objectType stamp] model.phrase.xml model.ptrLike[ptr ref]

9.2.24. model.listLike

model.listLike groups list-like elements. [3.8. Lists]	
Module	tei
Used by	model.inter sourceDesc
Members	listOrg listPerson listWit

9.2.25. model.milestoneLike

model.milestoneLike groups milestone-style elements used to represent reference systems. [1.3. The TEI Class System 3.11.3. Milestone Elements]	
Module	tei
Used by	model.global org subst
Members	<u>lb pb</u>

9.2.26. model.nameLike

model.nameLike groups elements which name or refer to a person, place, or organization.	
Module	tei
Used by	model.addrPart model.correspActionPart model.pPart.data org
Members	model.nameLike.agent[name orgName persName] model.offsetLike model.per-sNamePart[roleName] model.placeStateLike[model.placeNamePart[country settlement]] id-no rs
Note	A superset of the naming elements that may appear in datelines, addresses, statements of responsibility, etc.

9.2.27. model.nameLike.agent

model.nameLike.agent groups elements which contain names of individuals or corporate bodies. [3.6. Names, Numbers, Dates, Abbreviations, and Addresses]	
Module	tei
Used by	model.nameLike
Members	name orgName persName
Note	This class is used in the content model of elements which reference names of people or organizations.

9.2.28. model.noteLike

model.noteLike groups globally-available note-like elements. [3.9. Notes, Annotation, and Indexing]	
Module	tei
Used by	app model.global org
Members	note noteGrp

9.2.29. model.orgPart

model.orgPart groups elements which form part of the description of an organization.		
Module	tei	
Used by	org	
Members	model.eventLike <u>listOrg listPerson</u>	

9.2.30. model.pLike

model.pLike groups paragraph-like elements.	
Module	tei
Used by	availability correspAction correspDesc encodingDesc langUsage model.divPart org particDesc person physDesc publicationStmt seriesStmt sourceDesc
Members	ab p

9.2.31. model.pPart.data

model.pPart.data groups phrase-level elements containing names, dates, numbers, measures, and similar data. [3.6. Names, Numbers, Dates, Abbreviations, and Addresses]		
Module	tei	
Used by	model.limitedPhrase model.phrase	
Members	model.addressLike[address] model.dateLike[date] model.measureLike model.name- Like[model.nameLike.agent[name orgName persName] model.offsetLike model.per- sNamePart[roleName] model.placeStateLike[model.placeNamePart[country settlement]] id- no rs]	

9.2.32. model.pPart.edit

model.pPart.edit groups phrase-level elements for simple editorial correction and transcription. [3.5. Simple Editorial Changes]	
Module	tei
Used by	model.phrase pc w
Members	model.pPart.editorial[subst] model.pPart.transcriptional[add del restore]

9.2.33. model.pPart.editorial

model.pPart.editorial groups phrase-level elements for simple editorial interventions that may be useful both in transcribing and in authoring. [3.5. Simple Editorial Changes]		
Module	tei	
Used by	model.limitedPhrase model.pPart.edit	
Members	<u>subst</u>	

9.2.34. model.pPart.msdesc

model.pPart.msdesc groups phrase-level elements used in manuscript description. [10. Manuscript Description]		
Module	tei	
Used by	model.limitedPhrase model.phrase	
Members	objectType stamp	

9.2.35. model.pPart.transcriptional

model.pPart.transcriptional groups phrase-level elements used for editorial transcription of pre-existing source materials. [3.5. Simple Editorial Changes]	
Module	tei
Used by	model.pPart.edit
Members	add del restore

9.2.36. model.persNamePart

model.persNamePart groups elements which form part of a personal name. [13.2.1. Personal Names]	
Module	namesdates
Used by	model.nameLike
Members	roleName

$9.2.37.\ model.pers State Like$

model.persStateLike groups elements describing changeable characteristics of a person which have a definite duration, for example occupation, residence, or name.	
Module	tei
Used by	model.personPart
Members	<u>persName</u>
Note	These characteristics of an individual are typically a consequence of their own action or that of others.

9.2.38. model.personLike

model.personLike groups elements which provide information about people and their relationships.	
Module	tei
Used by	listPerson org particDesc
Members	org person

9.2.39. model.personPart

model.personPart groups elements which form part of the description of a person. [15.2.2. The Participant Description]	
Module	tei
Used by	<u>person</u>
Members	model.biblLike model.eventLike model.persStateLike[persName] idno name

9.2.40. model.phrase

model.phrase groups elements which can occur at the level of individual words or phrases. [1.3. The TEI Class System]	
Module	tei
Used by	date lem macro.paraContent macro.phraseSeq macro.specialPara rdg
Members	model.graphicLike[graphic] model.highlighted[model.emphLike[term title] model.hi- Like[hi q]] model.lPart model.pPart.data[model.addressLike[address] model.dateLike[date] model.measureLike model.nameLike[model.nameLike.agent[name orgName persName] model.offsetLike model.persNamePart[roleName] model.placeStateLike[model.place- NamePart[country settlement]] idno rs]] model.pPart.edit[model.pPart.editorial[subst] model.pPart.transcriptional[add del restore]] model.pPart.msdesc[objectType stamp] model.phrase.xml model.ptrLike[ptr ref] model.segLike[c cl m pc phr s seg w] model.specDescLike
Note	This class of elements can occur within paragraphs, list items, lines of verse, etc.

9.2.41. model.physDescPart

model.physDescPart groups specialized elements forming part of the physical description of a manuscript or similar written source.	
Module	msdescription
Used by	physDesc
Members	<u>accMat</u>

9.2.42. model.placeNamePart

model.placeNamePart groups elements which form part of a place name. [13.2.3. Place Names]	
Module	tei
Used by	model.placeStateLike
Members	country settlement

9.2.43. model.placeStateLike

model.placeStateLike groups elements which describe changing states of a place.	
Module	tei
Used by	model.nameLike
Members	model.placeNamePart[country settlement]

9.2.44. model.profileDescPart

model.profileDescPart groups elements which may be used inside <pre><pre><pre><pre><pre><pre><pre>and appear multiple times.</pre></pre></pre></pre></pre></pre></pre>	
Module	tei
Used by	<u>profileDesc</u>
Members	<u>correspDesc</u> <u>creation</u> <u>handNotes</u> <u>langUsage</u> <u>listTranspose</u> <u>particDesc</u> <u>textClass</u>

9.2.45. model.ptrLike

model.ptrLike groups elements used for purposes of location and reference. [3.7. Simple Links and Cross-References]	
Module	tei
Used by	model.limitedPhrase model.phrase model.publicationStmtPart.detail
Members	<u>ptr ref</u>

9.2.46. model.publicationStmtPart.agency

model.publicationStmtPart.agency groups the child elements of a <pre><pre></pre></pre>	
Module	tei
Used by	publicationStmt
Members	<u>publisher</u>
Note	The 'agency' child elements, while not required, are required if one of the 'detail' child elements is to be used. It is not valid to have a 'detail' child element without a preceding 'agency' child element. See also model.publicationStmtPart.detail.

9.2.47. model.publicationStmtPart.detail

model.publicationStmtPart.detail groups the agency-specific child elements of the < <u>publicationStmt></u> element of the TEI header. [2.2.4. Publication, Distribution, Licensing, etc.]			
Module	tei		
Used by	<u>publicationStmt</u>		
Members	model.ptrLike[ptr ref] address availability date idno pubPlace		
Note	A 'detail' child element may not occur unless an 'agency' child element precedes it.		

See also model.publicationStmtPart.agency.

9.2.48. model.quoteLike

model.quoteLike groups elements used to directly contain quotations.			
Module	tei		
Used by	model.attributable		
Members	<u>quote</u>		

9.2.49. model.rdgLike

model.rdgLike groups elements which contain a single reading, other than the lemma, within a textual variation. [12.1. The Apparatus Entry, Readings, and Witnesses]				
Module	textcrit			
Used by	арр			
Members	rdg			
Note	This class allows for variants of the < <u>rdg></u> element to be easily created via TEI customizations.			

9.2.50. model.resource

model.resource groups separate elements which constitute the content of a digital resource, as opposed to its metadata. [1.3. The TEI Class System]				
Module	tei			
Used by	<u>TEI</u>			
Members	facsimile text			

9.2.51. model.respLike

model.respLike groups elements which are used to indicate intellectual or other significant responsibility, for example within a bibliographic element.				
Module	tei			
Used by	titleStmt			
Members	<u>editor</u>			

9.2.52. model.segLike

model.segLike groups elements used for arbitrary segmentation. [16.3. Blocks, Segments, and Anchors 17.1. Linguistic Segment Categories]				
Module	tei			
Used by	nodel.phrase			
Members	c cl m pc phr s seg w			
Note	The principles on which segmentation is carried out, and any special codes or attribute values used, should be defined explicitly in the <segmentation> element of the <encodingdesc> within the associated TEI header.</encodingdesc></segmentation>			

9.2.53. model.teiHeaderPart

model.teiHeaderPart groups high level elements which may appear more than once in a TEI header.			
Module	tei		
Used by	<u>teiHeader</u>		
Members	encodingDesc profileDesc		

9.3. Attribute classes

9.3.1. att.anchoring

att.anchoring (anchoring) provides attributes for use on annotations, e.g. notes and groups of notes describing the existence and position of an anchor for annotations.

Module	tei					
Members	note noteGrp					
Attributes	Attributes					
	anchored	anchored (anchored) indicates whether the copy text shows the exact plate erence for the note.				
		Status	Optional			
		Datatype	teidata.truthValue			
		Default	true			
		Note	In modern texts, notes are usually anchored by means of explicit footnote or endnote symbols. An explicit indication of the phrase or line annotated may however be used instead (e.g. 'page 218, lines 3–4'). The <i>anchored</i> attribute indicates whether any explicit location is given, whether by symbol or by prose cross-reference. The value true indicates that such an explicit location is indicated in the copy text; the value false indicates that the copy text does not indicate a specific place of attachment for the note. If the specific symbols used in the copy text at the location the note is anchored are to be recorded, use the <i>n</i> attribute.			
	targetEnd	_	target end) points to the end of the span to which the note is attached, if he note is not embedded in the text at that point.			
		Status	Optional			
		Datatype	1—# occurrences of <u>teidata.pointer</u> separated by white- space			
		Note	This attribute is retained for backwards compatibility; it may be removed at a subsequent release of the Guidelines. The recommended way of pointing to a span of elements is by means of the range function of XPointer, as further described in 16.2.4.6. range().			
Example	necnon epi: elsewh<br <notegrp ta:<br=""><note xml:<br=""></note></notegrp>	<note xml:lang="pl"> Quatuor Tempora, tzw. Suche dni postne. </note>				

9.3.2. att.ascribed

att.ascribed provides attributes for elements representing speech or action that can be ascribed to a specific individual. [3 3 3 Quotation 8 3 Elements Unique to Spoken Texts]

[3.3.3. Quotation 8.3. Elements Unique to Spoken Texts]				
Module	tei	tei		
Members	att.ascribed.dir	att.ascribed.directed[q] change		
Attributes	Attributes who	indicates the person, or group of people, to whom the element content is ascribed. Status Optional Datatype 1—# occurrences of teidata.pointer separated by white-space In the following example from Hamlet, speeches (<sp>) in the body of the play are linked to <castitem> elements in the <castlist> using the who attribute.</castlist></castitem></sp>		
		<pre><castitem type="role"> <role xml:id="Barnardo">Bernardo</role> </castitem> <role xml:id="Francisco">Francisco</role> <roledesca roledesc="" soldier<=""></roledesca></pre>		

```
</castItem>
<!-- ... ->

<sp who="#Barnardo">
<speaker>Bernardo</speaker>
<!n = "l">who's there?</l>
</sp 
</sp 
</sp 
<sp who="#Francisco">
<speaker>Francisco</speaker>
<! n = "2">Nay, answer me: stand, and unfold yourself.</l>
</sp>

Note

For transcribed speech, this will typically identify a participant or participant group; in other contexts, it will point to any identified <person> element.
```

9.3.3. att.ascribed.directed

att.ascribed.directed provides attributes for elements representing speech or action that can be directed at a group or individual. [3.3.3. Quotation 8.3. Elements Unique to Spoken Texts]

Module	tei		
Members	g.		
Attributes	Attributes att.ascribed (@who) toWhom indicates the person, or group of people, to whom a speech act or action is directed. Status Optional Datatype 1-# occurrences of teidata.pointer separated by white-		
	In the following example from Mary Pix's The False Friend, speeches (<sp>) in the body of the play are linked to <castitem> elements in the <castlist> using the <i>toWhom</i> attribute, which is used to specify who the speech is directed to. Additionally, the <stage> includes <i>toWhom</i> to indicate the directionality of the action.</stage></castlist></castitem></sp>		
	<pre><castitem type="role"> <role xml:id="emil">Emilius.</role> </castitem> <castitem type="role"> <role xml:id="lov">Lovisa</role> </castitem> <castitem type="role"> <role xml:id="serv">A servant</role> </castitem> <!----> <sp towhom="#lov" who="#emil"> <speaker>Emil.</speaker> 1 n="1">My love! </sp> <pre> <sp towhom="#emil" who="#emil"></sp></pre></pre>		
	Note To indicate the recipient of written correspondence, use the elements used in section 2.4.6. Correspondence Description, rather than a <i>toWhom</i> attribute.		

9.3.4. att.breaking

att.breaking provides attributes to indicate whether or not the element concerned is considered to mark the end of an orthographic token in the same way as whitespace. [3.11.3. Milestone Elements]

[8			
Module	tei		
Members	<u>lb pb</u>		
Attributes	Attributes break indicates whether or not the element bearing this attribute should be considered to mark the end of an orthographic token in the same way as whitespace.		

Status Recommended **Datatype** teidata.enumerated Sample values include the element bearing this attribute is considered to mark the end of any adjacent orthographic token irrespective of the presence of any adjacent whitespace no the element bearing this attribute is considered not to mark the end of any adjacent orthographic token irrespective of the presence of any adjacent whitespace maybe the encoding does not take any position on this In the following lines from the 'Dream of the Rood', linebreaks occur in the middle of the words *l#ðost* and *reord-berendum*. <ab> ...e#esa tome iu ic#æs #e#orden #ita heardo#t .

#e# rihtne #erymde reord be<lb break="no"/>
rendum h#æt me þa#e#eorŏode #uldres ealdor ofer...
</ab>

9.3.5. att.cReferencing

att.cReferencing proof a pointer.	vides attributes that may	be used to supply	y a canonical reference as a means of identifying the target
Module	tei		
Members	ptr ref term		
Attributes	Attributes cRef	plying a can	eference) specifies the destination of the pointer by suponical reference expressed using the scheme defined in a 1> element in the TEI header Optional teidata.text The value of cRef should be constructed so that when the algorithm for the resolution of canonical references (described in section 16.2.5. Canonical References) is applied to it the result is a valid URI reference to the intended target. The <refsdec1> to use may be indicated with the decls attribute. Currently these Guidelines only provide for a single canonical reference to be encoded on any given <pre>sptr></pre> element.</refsdec1>

9.3.6. att.canonical

att.canonical provides attributes that can be used to associate a representation such as a name or title with canonical information about the object being named or referenced. [13.1.1. Linking Names and Their Referents]				
Module	tei			
Members	att.naming[att.personal[name orgName persName roleName] country editor pubPlace rs settlement] correspDesc date objectType publisher term title			
Attributes	Attributes key provides an externally-defined means of identifying the entity (or entities) being named, using a coded value of some kind. Status Optional			

Datatype teidata.text <author> type="organisation">[New Zealand Parliament, Legislative Council]</n</author> <name key="Hugo, Victor (1802-1885)"
ref="http://www.idref.fr/026927608">Victor Hugo</name> The value may be a unique identifier from a database, or Note any other externally-defined string identifying the refer-No particular syntax is proposed for the values of the key attribute, since its form will depend entirely on practice within a given project. For the same reason, this attribute is not recommended in data interchange, since there is no way of ensuring that the values used by one project are distinct from those used by another. In such a situation, a preferable approach for magic tokens which follows standard practice on the Web is to use a ref attribute whose value is a tag URI as defined in RFČ 4151. ref (reference) provides an explicit means of locating a full definition or identity for the entity being named by means of one or more URIs. Status Optional **Datatype** 1-# occurrences of teidata.pointer separated by whitespace <name ref="http://viaf.org/viaf/109557338"</pre> type="person">Seamus Heaney</name The value must point directly to one or more XML ele-Note ments or other resources by means of one or more URIs, separated by whitespace. If more than one is supplied the implication is that the name identifies several distinct en-

9.3.7. att.coordinated

att.coordinated provides attributes that can be used to position their parent element within a two dimensional coordinate

system.			
Module	transcr		
Members	<u>surface</u>		
Attributes	Attributes		
	start		element within a transcription of the text containing at least ne writing represented by this zone or surface. Optional

	datingPoint	reference to	which the datable item is understood to have occurred				
		Status	Optional				
		Datatype	<u>teidata.pointer</u>				

datingMethod

supplies a pointer to a <calendar> element or other means of interpreting the values of the custom dating attributes.

Status Optional

Datatype <u>teidata.pointer</u>

Contayning the Originall, Antiquity, Increa#e, Moderne e#tate, and de#cription of that Citie, written in the yeare <ate when-custom="1598" calendar="#julian" datingMethod="#julian">1598</date>. by Iohn Stow Citizen of London.

In this example, the *calendar* attribute points to a <calendar> element for the Julian calendar, specifying that the text content of the <a href="mailto:date> element is a Julian date, and the *datingMethod* attribute also points to the Julian calendar to indicate that the content of the *whencustom* attribute value is Julian too.

<date when="1382-06-28"
when-custom="6890-06-20"
datingMethod="#creationOfWorld"> µ### ####### ### <num>#</num> ##### <num>#### <num>####</num>
</date>

In this example, a date is given in a Mediaeval text measured "from the creation of the world", which is normalised (in *when*) to the Gregorian date, but is also normalized (in *when-custom*) to a machine-actionable, numeric version of the date from the Creation.

XML Schema Part 2: Datatypes Second Edition specification. The first

Note

Note that the *datingMethod* attribute (unlike *calendar* defined in att.datable) defines the calendar or dating system to which the date described by the parent element is normalized (i.e. in the *when-custom* or other *X-custom* attributes), *not* the calendar of the original date in the element.

9.3.10. att.datable.iso

att.datable.iso provides attributes for normalization of elements that contain datable events using the ISO 8601 standard. [3.6.4. Dates and Times 13.4. Dates] Module namesdates Members att.datable[change country creation date editor idno licence name orgName persName settlement stamp title] Attributes Attributes supplies the value of a date or time in a standard form. when-iso Status Optional **Datatype** teidata.temporal.iso The following are examples of ISO date, time, and date & time formats that are not valid W3C format normalizations. <date when-iso="1996-09-24T07:25+00">Sept. 24th, 1996 at 3:25 in the mcrning</date> <date when-iso="1996-09-24T03:25-04">Sept. 24th, 1996 at 3:25 in the marning</date>

9.3.12. att.datcat

att.datcat provides attributes that are used to align XML elements or attributes with the appropriate Data Categories (DCs) defined by the ISO 12620:2009 standard and stored in the Web repository called ISOCat at http://www.isocat.org/. [9.5.2. Lexical View 18.3. Other Atomic Feature Values]

		-		
Module	tei			
Members	att.segLike[c cl m	att.segLike[c cl m pc phr s seg w]		
Attributes	Attributes datcat	the appropriate Status	O (persistent identifier) that aligns the given element with e Data Category (or categories) in ISOcat. Optional	
	valueDatcat	element or the	1—# occurrences of teidata.pointer separated by white-space O (persistent identifier) that aligns the content of the given evalue of the given attribute with the appropriate simple of (or categories) in ISOcat.	

	Status	Optional
	Datatype	1-# occurrences of teidata.pointer separated by white- space
Example	dcr:valueDatcat the feature value egories reside in the ISOcat DCF and hosted by its registration auti	s the feature name to the data category "partOfSpeech" and to the data category "commonNoun". Both these data cated at www.isocat.org, which is the DCR used by ISO TC37 thority, the MPI for Psycholinguistics in Nijmegen.
		at.org/ns/dcr"> at.org/datcat/DC-1345" fVal="#commonNoun" .isocat.org/datcat/DC-1256"/>
Note	Registry (DCR). Data categories ture. In the DCR data model each (PID), i.e., an URI. Linguistic re- categories from a DCR should re TEI documents, ISO 12620:2009	scribing the data model and procedures for a Data Category are defined as elementary descriptors in a linguistic structurate data category gets assigned a unique Peristent IDentifier sources or preferably their schemas that make use of data fer to them using this PID. For XML-based resources, like normative Annex A gives a small Data Category Refertable online at http://www.isocat.org/12620/), which prond dcr:valueDatcat.

9.3.13. att.declarable

			header which may be independently selected by means of al Information with a Text]	
Module	tei			
Members	availability cor textClass	respDesc langUs	age listOrg listPerson particDesc seriesStmt sourceDesc	
Attributes	Attributes default			
		Status	Optional	
		Datatype	teidata.truthValue	
		Legal value are:	This element is selected if its parent is selected	
			This element can only be selected explicitly, unless it is the only one of its kind, in which case it is selected if its parent is selected.[Default]	
Note	text are fully de	efined in chapter	tion of declarable elements with individual parts of a TEI 15.3. Associating Contextual Information with a Text. Only may have a <i>default</i> attribute with a value of true.	

9.3.14. att.declaring

att.declaring provides attributes for elements which may be independently associated with a particular declarable element within the header, thus overriding the inherited default for that element. [15.3. Associating Contextual Information with a Text]

Module	tei	
Members	ab body div facsimile graphic p ptr ref surface surfaceGrp term text	
Attributes	Attributes decls identifies one or more declarable elements within the header, which a understood to apply to the element bearing this attribute and its conte Status Optional Datatype 1-# occurrences of teidata.pointer separated by white-space	ent.

Note The rules governing the association of declarable elements with individual parts of a TEI text are fully defined in chapter 15.3. Associating Contextual Information with a Text.

9.3.15. att.dimensions

att.dimensions provid	des attributes for describin	ng the size of phys	sical objects.	
Module	tei	tei		
Members	add date del gaj	add date del gap restore subst		
Attributes	Attributes att.ranging (@atLeast, @atMost, @min, @max, @confidence)			
	unit	names the unit used for the measurement		
		Status	Optional	
		Datatype	teidata.enumerated	
		Suggested values in- clude:	cm (centimetres)	
			mm (millimetres)	
			in (inches)	
			line lines of text	
			char (characters) characters of text	
	quantity	specifies the lo	ength in the units specified Optional	
		Datatype	teidata.numeric	
	extent		size of the object concerned using a project-specific vocab- ng quantity and units in a single string of words. Optional	
		Datatype	te"5 words"/>	
			tent="half the page"/>	
	precision	characterizes t	the precision of the values specified by the other attributes. Optional	
		Datatype	teidata.certainty	
	scope	where the mea	asurement summarizes more than one observation, speciability of this measurement.	
		Status	Optional	
		Datatype	teidata.enumerated	
		Sample val- ues include:	all measurement applies to all instances.	
			most measurement applies to most of the instances inspected.	
			range measurement applies to only the specified range of instances.	

9.3.16. att.divLike

att.divLike provides attributes common to all elements which behave in the same way as divisions. [4. Default Text Structure]

Module	tei			
Members	<u>div</u>			
Attributes	Attributes att.fragmentable (@part)			
	org	(organization)	specifies how the content of the division is organized.	
		Status	Optional	
		Datatype	teidata.enumerated	
		Legal values are:	 com- pos- no claim is made about the sequence in which ite the immediate contents of this division are to be processed, or their inter-relationships. 	
			uni- formthe immediate contents of this element are re- garded as forming a logical unit, to be processed in sequence.[Default]	
	sample	indicates whether this division is a sample of the original source and if so, from which part.		
		Status	Optional	
		Datatype	teidata.enumerated	
		Legal values are:	ini- tial division lacks material present at end in source.	
			me- di- division lacks material at start and end. al	
			fi- nal division lacks material at start.	
			un- known sition of sampled material within original un- known.	
			completedivision is not a sample.[Default]	

9.3.17. att.docStatus

7.5.17. an.aocsi			
att.docStatus provid	es attributes for use on me	etadata elements d	escribing the status of a document.
Module	tei		
Members	change revision	nDesc	
Attributes	Attributes status		status of a document either currently or, when associated lement, at the time indicated. Optional teidata.enumerated
		Sample values include:	ар-
			can- di- date
			cleared dep- re- cat- ed

	draft [Default]
	em- bar- goed
	ex- pired
	frozen
	gal- ley
	pro- posed
	pub- lished
	rec- om-
	men- da- tion
	sub- mit-
	ted
	un-
	fin- ished
	with-
	drawn
Example	<pre><revisiondesc status="published"> <change status="published" when="2010-10-21"></change> <change status="cleared" when="2010-10-02"></change> <change status="embargoed" when="2010-08-02"></change> <change <="" pre="" status="frozen" when="2010-05-01"></change></revisiondesc></pre>
	<pre>who="#MSM"/> <change status="draft" when="2010-03-01" who="#LB"></change> </pre>

9.3.18. att.editLike

att.editLike provides attributes describing the nature of an encoded scholarly intervention or interpretation of any kind. [3.5. Simple Editorial Changes 10.3.1. Origination 13.3.2. The Person Element 11.3.1.1. Core Elements for Transcriptional Work]

-				
Module	tei	tei		
Members	att.transcriptio	att.transcriptional[add del restore subst] date gap name org orgName persName person		
Attributes	Attributes			
	evidence	indicates the nature of the evidence supporting the reliability or accuracy of the intervention or interpretation.		
		Status	Optional	
		Datatype	1-# occurrences of <u>teidata.enumerated</u> separated by whitespace	
		Suggested values include:	in-ter- there is internal evidence to support the interven-nal tion.	

			ex- ter- there is external evidence to support the interven- nal tion.
			 con- jec- the intervention or interpretation has been made ture by the editor, cataloguer, or scholar on the basis of their expertise.
	instant	indicates wh	es whether this is an instant revision or not.
		Status	Optional
		Datatype	teidata.xTruthValue
		Default	false
Note	tervention in a scripts etc. Each pointe reference a bi	a text, for example er on the <i>source</i> (it bliographic citatio	ass are typically used to represent any kind of editorial in- e a correction or interpretation, or to date or localize manu- f present) corresponding to a witness or witness group should n such as a <witness>, <msdesc>, or <bibl> element, or itation, documenting the source concerned.</bibl></msdesc></witness>

9.3.19. att.edition

att.edition provides attr	ibutes identifying the	source edition fro	om which some encoded feature derives.		
Module	tei				
Members	<u>lb pb</u>				
Attributes	Attributes				
Tital Butters	ed	tion in which	(edition) supplies a sigil or other arbitrary identifier for the source edition in which the associated feature (for example, a page, column, or line break) occurs at this point in the text. Status Optional		
		Datatype	1-# occurrences of teidata.word separated by whitespace		
	edRef	associated fe	(edition reference) provides a pointer to the source edition in which the associated feature (for example, a page, column, or line break) occurs at this point in the text. Status Optional		
		Datatype	1-# occurrences of teidata.pointer separated by white- space		
Example	<1>Of that	Forbidden Tree, wh	e, <lb ed="1674"></lb> and <lb ed="1667"></lb> the Fruit nose <lb ed="1667 1674"></lb> mortal tast rld, <lb ed="1667"></lb> and all <lb ed="1674"></lb> our woe,		
Example	<pre><author>0 <title>Sta </bibl> <bibl xml: <author>0 <title>Sta </bibl> </il> </pre> </pre> <pre></pre> <pre></pre> <pre><pre><pre><pre><pre><pre><pre><pre></td><td colspan=2><pre><bibl xml:id="stapledon1937"> <author>Olaf Stapledon</author>, <title>Starmaker</title>, <publisher>Methuen</publisher>, <date>1937</date> <bibl></bibl></author></pre>				

9.3.20. att.fragmentable

att.fragmentable provides attributes for representing fragmentation of a structural element, typically as a consequence of some overlapping hierarchy.

Module tei

Members	att.divLike[div] att	t.segLike[c cl n	n pc phr s seg w ab p
Attributes	Attributes part	typically by so which is divid	ther or not its parent element is fragmented in some way, one other overlapping structure: for example a speech ed between two or more verse stanzas, a paragraph which a page division, a verse line which is divided between two Optional
		Datatype	teidata.enumerated
		Legal values are:	Y (yes) the element is fragmented in some (unspecified) respect
			N (no) the element is not fragmented, or no claim is made as to its completeness[Default]
			I (initial) this is the initial part of a fragmented element
			M (medial) this is a medial part of a fragmented element
			F (final) this is the final part of a fragmented element
		Note	The values I, M, or F should be used only where it is clear how the element may be reconstituted.

9.3.21. att.global

cal reference for an element; see section 3.11. Reference Systems. n (number) gives a number (or other label) for an element, which is not necessarily unique within the document. Status Optional			Datatype	ID	
necessarily unique within the document. Status Optional		cal reference for an element; see section 3.11			
•					
Datatype <u>teidata.text</u>			Status	Optional	
			Datatype	teidata.text	

Note

The value of this attribute is always understood to be a single token, even if it contains space or other punctuation characters, and need not be composed of numbers only. It is typically used to specify the numbering of chapters, sections, list items, etc.; it may also be used in the specification of a standard reference system for the text.

xml:lang

(language) indicates the language of the element content using a 'tag' generated according to BCP 47.

Status Optional

Datatype <u>teidata.language</u>

```
The consequences of
this rapid depopulation were the loss of the last
<foreign xml:lang="rap">ariki</foreign> or chief
(Routledge 1920:205,210) and their connections to
ancestral territorial organization.
```

Note

The *xml:lang* value will be inherited from the immediately enclosing element, or from its parent, and so on up the document hierarchy. It is generally good practice to specify *xml:lang* at the highest appropriate level, noticing that a different default may be needed for the teithead-er from that needed for the associated resource element or elements, and that a single TEI document may contain texts in many languages.

Only attributes with free text values (rare in these guidelines) will be in the scope of *xml:lang*.

The authoritative list of registered language subtags is maintained by IANA and is available at http://www.iana.org/assignments/language-subtag-registry. For a good general overview of the construction of language tags, see http://www.w3.org/International/articles/language-tags/, and for a practical step-by-step guide, see https://www.w3.org/International/questions/qa-choosing-language-tags.en.php.

The value used must conform with BCP 47. If the value is a private use code (i.e., starts with x- or contains - x-), a ! a starts with a matching value for its ident attribute should be supplied in the TEI header to document this value. Such documentation may also optionally be supplied for non-private-use codes, though these must remain consistent with their IETFInternet Engineering Task Force definitions.

xml:base

provides a base URI reference with which applications can resolve relative URI references into absolute URI references.

Status Optional

Datatype teidata.pointer

```
<div type="bibl">
 <head>Bibliography</head>
 <listBibl xml:base="http://www.lib.ucdavis.edu/BWRP/Works/">

att.global.linking pro	vides a set of attributes for hypertextual linking. [16. Linking, Segmentation, and Alignment]
Module	linking
Members	att.global[TEI ab accMat add address app availability body c change cl classCode correspAction correspDesc country creation date del div editor encodingDesc facsimile fileDesc gap graphic handNote handNotes hi idno interp interpGrp keywords langUsage language lb lem licence listOrg listPerson listTranspose listWit m metamark name note noteGrp object-Type org orgName p particDesc pb pc persName person phr physDesc postCode profileDesc ptr pubPlace publicationStmt publisher q quote rdg ref restore revisionDesc roleName rs s seg seriesStmt settlement sourceDesc span spanGrp stamp street subst surface surfaceGrp teiHeader term text textClass title titleStmt transpose variantEncoding w witness]
Attributes	Attributes corresp (corresponds) points to elements that correspond to the current element in some way. Status Optional Datatype 1-# occurrences of teidata.pointer separated by white-space

```
</div>
</body>
</text>
</group>
```

In this example a <group> contains two <text>s, each containing the same document in a different language. The correspondence is indicated using *corresp*. The language is indicated using *xml:lang*, whose value is inherited; both the tag with the *corresp* and the tag pointed to by the *corresp* inherit the value from their immediate parent.

In this example, a <place> element containing information about the city of London is linked with two elements in a literary personography. This correspondence represents a slightly looser relationship than the one in the preceding example; there is no sense in which an allegorical character could be substituted for the physical city, or vice versa, but there is obviously a correspondence between them.

synch

copyOf

next

(synchronous) points to elements that are synchronous with the current element.

Status Optiona

Datatype 1–# occurrences of <u>teidata.pointer</u> separated by white-

space

sameAs points to an element that is the same as the current element.

Status Optional

Datatype teidata.pointer

<u>tordata.pointer</u>

Status Optional

 Datatype
 teidata.pointer

 Note
 Any content of the current element should be ignored. Its

points to an element of which the current element is a copy.

true content is that of the element being pointed at.

points to the next element of a virtual aggregate of which the current element is part.

Status Optional

Datatype <u>teidata.pointer</u>

Note It is recommended that the element indicated be of the

same type as the element bearing this attribute.

prev (previous) points to the previous element of a virtual aggregate of which

the current element is part.

Status Optional

Datatype <u>teidata.pointer</u>

	Note	It is recommended that the element indicated be of the same type as the element bearing this attribute.
exclude	points to element.	ments that are in exclusive alternation with the current ele-
	Status	Optional
	Datatype	1-# occurrences of <u>teidata.pointer</u> separated by white- space
select	or uncertaint ed, the degre	or more alternants; if one alternant is selected, the ambiguity by is marked as resolved. If more than one alternant is selected of ambiguity or uncertainty is marked as reduced by the ternants not selected.
	Status	Optional
	Datatype	1-# occurrences of <u>teidata.pointer</u> separated by white- space
	Note	This attribute should be placed on an element which is superordinate to all of the alternants from which the selection is being made.

9.3.26. att.global.rendition

_		utes common to a	all elements in the TEI encoding scheme. [1.3.1.1.3. Rendi-	
tion Indicators] Module	tei

Attributes	Attributes			
	rend	(rendition) in sented in the	ndicates how the element in question was rendered or presource text.	
		Status	Optional	
		Datatype	1-# occurrences of teidata.word separated by whitespace	
		<1b/>To <1b/>On H	nd="align(center) case(allcaps)"> The <lb></lb> Duchesse <lb></lb> of <lb></lb> Newcastle, Her <lb></lb> der <lb></lb> der <lb></lb> i="case(mixed)">New Blazing-World	
		Note	These Guidelines make no binding recommendations for the values of the <i>rend</i> attribute; the characteristics of visual presentation vary too much from text to text and the decision to record or ignore individual characteristics varies too much from project to project. Some potentially useful conventions are noted from time to time at appropriate points in the Guidelines. The values of the <i>rend</i> attribute are a set of sequence-indeterminate individual tokens separated by whitespace.	
	style		expression in some formal style definition language which endering or presentation used for this element in the source	
		Status	Optional	
		Datatype	<u>teidata.text</u>	
		<1b/>To <1b/>	/le="text-align: center; font-variant: small-caps"> The <lb></lb> Duchesse <lb></lb> of <lb></lb> Newcastle, <lb></lb> On Her Le="font-variant: normal">New Blazing-World	

</head> Note Unlike the attribute values of rend, which uses whitespace as a separator, the style attribute may contain whitespace. This attribute is intended for recording inline stylistic information concerning the source, not any particular output. The formal language in which values for this attribute are expressed may be specified using the <styleDefDecl> element in the TEI header. If style and rendition are both present on an element, then style overrides or complements rendition. style should not be used in conjunction with rend, because the latter does not employ a formal style definition language. rendition points to a description of the rendering or presentation used for this element in the source text. Status Optional **Datatype** 1-# occurrences of teidata.pointer separated by whitespace <head rendition="#ac #sc">
 <lb/>To The <lb/>Duchesse <lb/>of <lb/>Newcastle, <lb/>On Her <hi rendition="#normal">New Blazing-World</hi>. </head> <!-- elsewhere... -->
<rendition xml:id="sc"</pre> scheme="css">font-variant: small-caps</rendition>
<rendition xml:id="normal"</pre> scheme="css">font-variant: normal</rendition>
<rendition xml:id="ac"</pre> scheme="css">text-align: center</rendition> The rendition attribute is used in a very similar way to Note the class attribute defined for XHTML but with the important distinction that its function is to describe the appearance of the source text, not necessarily to determine how that text should be presented on screen or paper. If rendition is used to refer to a style definition in a formal language like CSS, it is recommended that it not be used in conjunction with rend. Where both rendition and rend are supplied, the latter is understood to override or complement the former. Each URI provided should indicate a <rendition> element defining the intended rendition in terms of some appropriate style language, as indicated by the scheme attribute.

9.3.27. att.global.responsibility

att.global.responsibility provides attributes indicating the agent responsible for some aspect of the text, the markup or something asserted by the markup, and the degree of certainty associated with it. [1.3.1.1.4. Sources, certainty, and responsibility 3.5. Simple Editorial Changes 11.3.2.2. Hand, Responsibility, and Certainty Attributes 17.3. Spans and Interpretations 13.1.1. Linking Names and Their Referents]

-	
Module	tei
Members	att.global[TEI ab accMat add address app availability body c change cl classCode correspAction correspDesc country creation date del div editor encodingDesc facsimile fileDesc gap graphic handNote handNotes hi idno interp interpGrp keywords langUsage language lb lem licence listOrg listPerson listTranspose listWit m metamark name note noteGrp object-Type org orgName p particDesc pb pc persName person phr physDesc postCode profileDesc ptr pubPlace publicationStmt publisher q quote rdg ref restore revisionDesc roleName rs s seg seriesStmt settlement sourceDesc span spanGrp stamp street subst surface surfaceGrp teiHeader term text textClass title titleStmt transpose variantEncoding w witness]
Attributes	Attributes cert (certainty) signifies the degree of certainty associated with the intervention or interpretation. Status Optional

		Datatype	teidata.probCert
	resp	p (responsible party) indicates the agency responsible for the interventio or interpretation, for example an editor or transcriber.	
		Status	Optional
		Datatype	1-# occurrences of teidata.pointer separated by white- space
		Note	To reduce the ambiguity of a <i>resp</i> pointing directly to a person or organization, we recommend that <i>resp</i> be used to point not to an agent (<pre>specific person</pre> or <pre>sorg</pre>) but to a <pre>respStmt</pre> , <author< pre="">, <editor< pre=""> or similar element which clarifies the exact role played by the agent. Pointing to multiple <pre>respStmt</pre> s allows the encoder to specify clearly each of the roles played in part of a TEI file (creating, transcribing, encoding, editing, proofing etc.).</editor<></author<>
Example		ers	igh">peacemakers called the children of God.
Example		#JENS1_transcri	ortionizing iber">u -> criber">

9.3.28. att.global.source

att.global.source provides attributes used by elements to point to an external source. [1.3.1.1.4. Sources, certainty, and responsibility 3.3.3. Quotation 8.3.4. Writing]

sponsibility 3.3.3. Quotatio	•	ments to point	to an external source. [1.5.1.1.4. Sources, certainty, and re-
Module	tei

Attributes	Attributes source	specifies the	source from which some aspect of this element is drawn. Optional
		Datatype	1-# occurrences of <u>teidata.pointer</u> separated by white- space
		Note	The source attribute points to an external source. When used on elements describing schema components such as <schemaspec> or <moduleref> it identifies the source from which declarations for the components of the object being defined may be obtained. On other elements it provides a pointer to the bibliographical source from which a quotation or citation is drawn. In either case, the location may be provided using any form of URI, for example an absolute URI, a relative</moduleref></schemaspec>

	URI, or private scheme URI that is expanded to an absolute URI as documented in a <prefixdef>. If more than one location is specified, the default assumption is that the required source should be obtained by combining the resources indicated.</prefixdef>	
Example	As Willard McCarty (<bibl xml:id="mcc_2012">2012">2012, p.2</bibl>) tells us, <quote quote="" term.<=""> <!-- --></quote>	source="#mcc_2012">
Example	<pre><!----> <quote source="#chicago_15_ed">Grammatical theories are in flux, and the more we learn, the less we seem to know.</quote> <!----> <!----> <bibl xml:id="chicago_15_ed"> <title level="m">The Chicago Manual of Style</title>, <edition>15th edition</edition>. <pubplace>Chicago Chicago Press (<date>2003</date>), <biblscope unit="page">p.147</biblscope>. </pubplace></bibl></pre>	ie
Example	<pre></pre>	
Example	<pre></pre>	

9.3.29. att.handFeatures

att.handFeatures pro Hands]	vides attributes describi	ng aspects of the	hand in which a manuscript is written. [11.3.2.1. Document		
Module	tei				
Members	<u>handNote</u>				
Attributes	Attributes				
	scribe	gives a name for this hand	e or other identifier for the scribe believed to be responsible .		
		Status	Optional		
		Datatype	teidata.name		
	scribeRef		points to a full description of the scribe concerned, typically supplied by a <pre>sperson></pre> element elsewhere in the description.		
		Status	Optional		
		Datatype	1-# occurrences of <u>teidata.pointer</u> separated by white- space		
	script	characterizes the particular script or writing style used example <i>secretary</i> , <i>copperplate</i> , <i>Chancery</i> , <i>Italian</i> , etc.			
		Status	Optional		
		Datatype	1-# occurrences of teidata.name separated by whitespace		
	scriptRef		all description of the script or writing style used by this hand, plied by a <scriptnote> element elsewhere in the de-</scriptnote>		
		Status	Optional		
		Datatype	1-# occurrences of teidata.pointer separated by white-space		
	medium	describes the e.g. <i>pencil</i>	e tint or type of ink, e.g. brown, or other writing medium,		
		Status	Optional		

		Datatype	1-# occurrences of <u>teidata.enumerated</u> separated by whitespace
	scope	specifies how status	widely this hand is used in the manuscript. Optional
		Datatype	teidata.enumerated
		Legal values are:	sole only this hand is used throughout the manuscript
			ma- jor this hand is used through most of the manuscript
			mi- nor this hand is used occasionally in the manuscript
Note	Usually either scri	pt or scriptRef,	and similarly, either scribe or scribeRef, will be supplied.

9.3.30. att.internetMedia

att.internetMedia pr	att.internetMedia provides attributes for specifying the type of a computer resource using a standard taxonomy.			
Module	tei			
Members	att.media[graphic] ptr ref			
Attributes	Attributes mimeType (MIME media type) specifies the applicable multimedia internet mail extension (MIME) media type Status Optional Datatype 1-# occurrences of teidata.word separated by whitespace			
Example	In this example <i>mimeType</i> is used to indicate that the URL points to a TEI XML file encoded in UTF-8. <pre></pre>			
Note	This attribute class provides an attribute for describing a computer resource, typically available over the internet, using a value taken from a standard taxonomy. At present only a single taxonomy is supported, the Multipurpose Internet Mail Extensions (MIME) Media Type system. This typology of media types is defined by the Internet Engineering Task Force in RFC 2046. The list of types is maintained by the Internet Assigned Numbers Authority (IANA). The <i>mimeType</i> attribute must have a value taken from this list.			

9.3.31. att.lexicographic.normalized

	lized provides attributes fure in the dictionaries mo	for usage within word-level elements in the analysis module and within dule.		
Module	analysis	analysis		
Members	att.linguistic[pc w]			
Attributes	1	(normalized) provides the normalized/standardized form of information present in the source text in a non-normalized form Status Optional Datatype teidata.text Normalization of part-of-speech information within a dictionary entry. <pre> <gramgrp> <pre> <</pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></gramgrp></pre>		

<s>
<w norm="persuasion">perswasion</w>
<w>of</w>
<w norm="Unity">Vnitie</w>
</s>

Example of normalization from Aviso. Relation oder Zeitung. Wolfenbüttel, 1609. In: Deutsches Textarchiv.

```
<s>
<w norm="freiwillig">freywillig</w>
<pc norm=","
join="left">/</pc>
<w norm="unbedrängt">vnbedra#ngt</w>
<w norm="und">vnd</w>
<w norm="unverhindert">vnuerhindert</w>
</s>
</w norm="Teil">Theyll</w>
<w norm="Freude">Frewde</w>
```

orig

(original) gives the original string or is the empty string when the element does not appear in the source text.

Status Optional

Datatype teidata.text

Example from a language documentation project of the Mixtepec-Mixtec language (ISO 639-3: 'mix'). This is a use case where speakers spell something incorrectly but we would like to preserve it for any number of reasons, the use of *orig* is essential and could have uses for both the speaker to see past mistakes, researchers to get insight into how untrained speakers write their language instinctually (in contrast to prescribed convention), etc.:

```
<w orig="ntsa sia'i">ntsasia'i</w>
```

Example from the EarlyPrint project. Fragment of text where obvious errors have been corrected but the original forms remain recorded:

```
<w lemma="he"
pos="pns"
xml:id="blafj-003-a-0950">he</w>
<w lemma="have"
pos="vvz"
xml:id="blafj-003-a-0960">hath</w>
<w lemma="bring"
pos="vvn"
xml:id="blafj-003-a-0970">brought</w>
<w lemma="forth"
pos="av"
xml:id="blafj-003-a-0980"
orig="sorth">forth
```

An example from the EarlyPrint project showing the use of both *norm* and *orig*. The *orig* attribute preserves the original version (sometimes with spelling errors, often with printer abbreviations), the element content resolves printer abbreviations but retains the original orthography, and the *norm* attribute holds normalized values:

```
<wre><w lemma="commandment"
pos="nl"
norm="commandment"
xml:id="b9avr-018-a-7720"
orig="commandmem#t">commandment</w>
```

Note

It needs to be stressed that the two attributes in this class are meant for strictly lexicographic and linguistic uses, and not for editorial interventions. For the latter, the mechanism based on <choice>, <orig>, and <reg> needs to be employed.

9.3.32. att.linguistic

att.linguistic provides a set of attributes concerning linguistic features of tokens, for usage within token-level elements, specifically <w> and <pc> in the analysis module. [17.4.2. Lightweight Linguistic Annotation]

Module	analysis
Members	<u>pc</u> <u>w</u>
Attributes	Attributes att.lexicographic.normalized (@norm, @orig)

lemma

provides a lemma (base form) for the word, typically uninflected and serving both as an identifier (e.g. in dictionary contexts, as a headword), and as a basis for potential inflections.

Status Optional

Datatype <u>teidata.text</u>

```
<w lemma="wife">wives</w>
<w lemma="Arznei">Artzeneyen</w>
```

lemmaRef

provides a pointer to a definition of the lemma for the word, for example in an online lexicon.

Status Optional

Datatype teidata.pointer

```
<w type="verb"
lemma="hit"
lemmaRef="http://www.example.com/lexicon/hitvb.xml">hitt<m type="suffix">ing</m>
</w>
```

pos

(part of speech) indicates the part of speech assigned to a token (i.e. information on whether it is a noun, adjective, or verb), usually according to some official reference vocabulary (e.g. for German: STTS, for English: CLAWS, for Polish: NKJP, etc.).

Status Optional

Datatype teidata.text

The German sentence 'Wir fahren in den Urlaub.' tagged with the Stuttgart-Tuebingen-Tagset (STTS).

```
<s> <w pos="PPER">Wir</w>
  <w pos="VVFIN">fahren</w>
  <w pos="APPR">in</w>
  <w pos="ART">den</w>
  <w pos="NN">Urlaub</w>
  <w pos="$.">.</w>
  </s>
```

The English sentence 'We're going to Brazil.' tagged with the CLAWS-5 tagset, arranged inline (with significant whitespace).

```
<w pos="PNP">We</w><w pos="VBB">'re</w> <w pos="VVG">going</w> <w pos="PRP">to</w> to to
```

The English sentence 'We're going on vacation to Brazil for a month!' tagged with the CLAWS-7 tagset and arranged sequentially.

msd

(morphosyntactic description) supplies morphosyntactic information for a token, usually according to some official reference vocabulary (e.g. for German: STTS-large tagset; for a feature description system designed as (pragmatically) universal, see Universal Features).

Status Optional

Datatype teidata.text

```
<ab>
<my pos="PPER"
msd="1.Pl.*.Nom">Wir</m>
<my pos="VVFIN"
msd="1.Pl.Pres.Ind">fahren</m>
<my pos="APPR"
msd="--">in</m>
<my pos="APPR"
msd="--">in</m>
<my pos="ART"
msd="Def.Masc.Akk.Sg">den</m>
```

<w pos="NN"
 msd="Masc.Akk.Sg">Urlaub</w>
<pc pos="\$."
 msd="--">.</pc>
</ab>

join

when present, it provides information on whether the token in question is adjacent to another, and if so, on which side. The definition of this attribute is adapted from ISO MAF (Morpho-syntactic Annotation Framework), ISO 24611:2012.

Status Optional

Datatype teidata.text

Legal values no

are: (the token is not adjacent to another)

left

(there is no whitespace on the left side of the to-

right

(there is no whitespace on the right side of the token)

both

(there is no whitespace on either side of the token)

over-

lap (the token overlaps with another; other devices (specifying the extent and the area of overlap) are needed to more precisely locate this token in the character stream)

The example below assumes that the lack of whitespace is marked redundantly, by using the appropriate values of *join*.

Note that a project may make a decision to only indicate lack of whitespace in one direction, or do that non-redundantly. The existing proposal is the broadest possible, on the assumption that we adopt the "streamable view", where all the information on the current element needs to be represented locally.

The English sentence 'We're going on vacation.' tagged with the CLAWS-5 tagset, arranged sequentially, tagged on the assumption that only the lack of the preceding whitespace is indicated.

Note

These attributes make it possible to encode simple language corpora and to add a layer of linguistic information to any tokenized resource. See section 17.4.2. Lightweight Linguistic Annotation for discussion.

9.3.33. att.media

att.media provides attributes for specifying display and related properties of external media.

Module	tei			
Members	graphic			
Attributes	Attributes att.internetMedia (@mimeType)			
	width	Where the me	dia are displayed, indicates the display width	
		Status	Optional	
	Datatype teidata.outputMeasurement			
	height Where the media are displayed, indicates the display height		dia are displayed, indicates the display height	
		Status Optional		
		Datatype	teidata.outputMeasurement	
	scale	Where the media are displayed, indicates a scale factor to be appl when generating the desired display size Status Optional		
		Datatype <u>teidata.numeric</u>		

9.3.34. att.msExcerpt

att.msExcerpt (manuscript excerpt) provides attributes used to describe excerpts from a manuscript placed in a description thereof. [10.6. Intellectual Content]

Module	msdescription
Members	quote
Attributes	Attributes defective indicates whether the passage being quoted is defective, i.e. incomplete through loss or damage. Status Optional Datatype teidata.xTruthValue
Note	In the case of an incipit, indicates whether the incipit as given is defective, i.e. the first words of the text as preserved, as opposed to the first words of the work itself. In the case of an explicit, indicates whether the explicit as given is defective, i.e. the final words of the text as preserved, as opposed to what the closing words would have been had the text of the work been whole.

9.3.35. att.naming

att.naming provides attributes common to elements which refer to named persons, places, organizations etc. [3.6.1. Referring Strings 13.3.6. Names and Nyms]

ring Strings 13.3.6. Names and Nyms]				
Module	tei			
Members	att.personal[name	att.personal[name orgName persName roleName] country editor pubPlace rs settlement		
Attributes	Attributes att.canonical (@key, @ref)			
	role may be used to specify further information about the entity ref this name in the form of a set of whitespace-separated values, ple the occupation of a person, or the status of a place. Status Optional		he form of a set of whitespace-separated values, for examation of a person, or the status of a place.	
			Optional	
		Datatype	1-# occurrences of <u>teidata.enumerated</u> separated by whitespace	
		`	the canonical name) provides a means of locating the m (nym) of the names associated with the object named by earing it.	
		Status	Optional	
		Datatype	1-# occurrences of <u>teidata.pointer</u> separated by white- space	
		Note	The value must point directly to one or more XML elements by means of one or more URIs, separated by	

	whitespace. If more than one is supplied, the implication is that the name is associated with several distinct canonical names.
--	---

9.3.36. att.notated

att.notated provides attributes to indicate any specialised notation used for element content.			
Module	tei		
Members	c cl m phr quote s seg w		
Attributes	Attributes notation	names the not Status Datatype	ation used for the content of the element. Optional teidata.enumerated

9.3.37. att.personal

att.personal (attributes for components of names usually, but not necessarily, personal names) common attributes for those elements which form part of a name usually, but not necessarily, a personal name. [13.2.1, Personal Names]

elements which form part of a	name usually, but n	not necessarily,	a personal name. [13.2.1. Personal Names]
Module	tei		
Members	name orgName persName roleName		
Attributes	Attributes <u>att.nami</u> full	indicates whet tion or simply Status	Optional
		Datatype Legal values are:	(yes) the name component is spelled out in ful-l.[Default] abb (abbreviated) the name component is given in an abbreviated form.
	sort	(sort) specifies within the nan Status Datatype	init

9.3.38. att.placement

att.placement provides attributes for describing where on the source page or object a textual element appears. [3.5.3. Additions, Deletions, and Omissions 11.3.1.4. Additions and Deletions]

, , ,				
Module	tei			
Members	add metamark note noteGrp			
Attributes	Attributes place specifies where this item is placed. Status Recommended Datatype 1-# occurrences of teidata.enumerated separated by whitespace			
		Suggested values include:	top at the top of the page	

bottom at the foot of the page gin in the margin (left, right, or both) oppo- on the opposite, i.e. facing, page site overleaf on the other side of the leaf above above the line right to the right, e.g. to the right of a vertical line of text, or to the right of a figure below below the line left to the left, e.g. to the left of a vertical line of text, or to the left of a figure end at the end of e.g. chapter or volume. in**line** within the body of the text. $\textbf{space} \hspace{-0.5em} \textbf{n}$ a predefined space, for example left by an earlier scribe. <add place="margin">[An addition written in the margin]</add> <add place="bottom opposite">[An addition written at the
foot of the current page and also on the facing page]</add> <note place="bottom">Ibid, p.7</note>

9.3.39. att.pointing

att.pointing provides a set of attributes used by all elements which point to other elements by means of one or more URI references. [1.3.1.1.2. Language Indicators 3.7. Simple Links and Cross-References]

Module	tei	tei		
Members	licence note no	licence note noteGrp ptr ref span term		
Attributes	Attributes targetLang			
		<pre><ptr <ptr="" pre="" target=" type=" targetla="" tu="" tu<="" xml:=""></ptr></pre>	ng="pl"/> id="pol-swh_aln_2.1.2-ptr" swh/UDHR/text.xml#swh_txt_1-head" v" ng="sw"/>	

In the example above, the combines pointers at parallel fragments of the Universal Declaration of Human Rights: one of them is in Polish, the other in Swahili. The value must conform to BCP 47. If the value is a pri-Note vate use code (i.e., starts with x- or contains -x-), a $\leq \overline{lan}$ guage> element with a matching value for its *ident* attribute should be supplied in the TEI header to document this value. Such documentation may also optionally be supplied for non-private-use codes, though these must remain consistent with their IETFInternet Engineering Task Force definitions. target specifies the destination of the reference by supplying one or more URI References Status Optional **Datatype** 1-# occurrences of teidata.pointer separated by whitespace One or more syntactically valid URI references, separat-Note ed by whitespace. Because whitespace is used to separate URIs, no whitespace is permitted inside a single URI. If a whitespace character is required in a URI, it should be escaped with the normal mechanism, e.g. TEI%20Consortium. evaluate (evaluate) specifies the intended meaning when the target of a pointer is itself a pointer. Status Optional **Datatype** teidata.enumerated Legal values all if the element pointed to is itself a pointer, then are: the target of that pointer will be taken, and so on, until an element is found which is not a pointer. one if the element pointed to is itself a pointer, then its target (whether a pointer or not) is taken as the target of this pointer. none no further evaluation of targets is carried out beyond that needed to find the element specified in the pointer's target. If no value is given, the application program is responsi-Note ble for deciding (possibly on the basis of user input) how far to trace a chain of pointers.

9.3.40. att.ranging

att.ranging provides attributes for describing numerical ranges.				
Module	tei	tei		
Members	att.dimensions	att.dimensions[add date del gap restore subst]		
Attributes	Attributes atLeast atMost	atLeast gives a minimum estimated value for the approximate measurement Status Optional Datatype teidata.numeric		
		Datatype	teidata.numeric	

	min		assurement summarizes more than one observation or a es the minimum value observed. Optional
		Datatype	teidata.numeric
	range, supplies the maximum value observed.		assurement summarizes more than one observation or a set the maximum value observed. Optional
		Datatype	teidata.numeric
	confidence	specifies the degree of statistical confidence (between zero and one) a value falls within the range specified by <i>min</i> and <i>max</i> , or the proportion of observed values that fall within that range.	
		Status	Optional
		Datatype	teidata.probability
Example	<pre><gap of<="" one="" pre="" reason=": extent="></gap></pre>	illegible" or two letters"	ion by mail from <del rend="overstrike"> atLeast="1" atMost="2" unit="chars"/> aphic office, New York.

9.3.41. att.resourced

att.resourced provides attributes by which a resource (such as an externally held media file) may be located.			
Module	tei		
Members	graphic		
Attributes	Attributes url (uniform resource locator) specifies the URL from which the media concerned may be obtained. Status Required Datatype teidata.pointer		

9.3.42. att.segLike

· · · · · · · · · · · · · · · · · · ·				
att.segLike provides attributes for elements used for arbitrary segmentation. [16.3. Blocks, Segments, and Anchors 17.1. Linguistic Segment Categories]				
Module	tei			
Members	c cl m pc phr s seg w			
Attributes	Attributes att.datcat (@datcat, @valueDatcat) att.fragmentable (@part) function (function) characterizes the function of the segment. Status Optional Datatype teidata.enumerated Note Attribute values will often vary depending on the type of element to which they are attached. For example, a <cl>, may take values such as coordinate, subject, adverbial etc. For a <phr> may be more appropriate. Such constraints will typically be implemented by a project-defined customization.</phr></cl>			

9.3.43. att.sortable

att.sortable provides attributes for elements in lists or groups that are sortable, but whose sorting key cannot be derived mechanically from the element content. [9.1. Dictionary Body and Overall Structure]		
Module	tei	
Members	correspAction idno listOrg listPerson listWit org person term witness	
Attributes	Attributes	

sortKey supplies the sort key for this element in an index, list or group which contains it. Status Optional Datatype teidata.word David's other principal backer, Josiah ha-Kohen <index indexName="NAMES"> <term sortKey="Azarya_Josiah_Kohen">Josiah ha-Kohen b. Azarya</term> </index> b. Azarya, son of one of the last gaons of Sura was David's o wn first The sort key is used to determine the sequence and Note grouping of entries in an index. It provides a sequence of characters which, when sorted with the other values, will produced the desired order; specifics of sort key construction are application-dependent Dictionary order often differs from the collation sequence of machine-readable character sets; in English-language dictionaries, an entry for 4-H will often appear alphabetized under 'fourh', and McCoy may be alphabetized under 'maccoy', while A1, A4, and A5 may all appear in numeric order 'alphabetized' between 'a-' and 'AA'. The sort key is required if the orthography of the dictionary entry does not suffice to determine its location.

9.3.44. att.spanning

att.spanning provides attributes for elements which delimit a span of text by pointing mechanisms rather than by enclosing it. [11.3.1.4. Additions and Deletions 1.3.1. Attribute Classes]

it. [11.3.1.4. Additions and Deletions 1.3.1. Attribute Classes]			
Module	tei		
Members	lb metamark pb		
Attributes	Attributes		
	spanTo indicates the end of a span initiated by the element bearing this attribute.		
		Status	Optional
		Datatype	teidata.pointer
		Schematron	The @spanTo attribute must point to an element following the current element <sch:rule context="tei:*[@spanTo]"> <sch:assert test="id(substring(@spanTo,2)) and following::*[@xml:id=substring(current()/@spanTo,2)]">The element indicated by @spanTo (<sch:value-of select="@spanTo"></sch:value-of>) must follow the current element <sch:name></sch:name> </sch:assert> </sch:rule>
Note	The span is defined as running in document order from the start of the content of the pointing element to the end of the content of the element pointed to by the <i>spanTo</i> attribute (if any). If no value is supplied for the attribute, the assumption is that the span is coextensive with the pointing element. If no content is present, the assumption is that the starting point of the span is immediately following the element itself.		

9.3.45. att.textCritical

att.textCritical defines a set of attributes common to all elements representing variant readings in text critical work. [12.1. The Apparatus Entry, Readings, and Witnesses]

The Apparatus Entry, Readings, and Witnesses]			
Module	textcrit		
Members	<u>lem</u> rdg		
Attributes	Attributes <u>att.written</u> (@hand) <u>att.typed</u> (type, @subtype)		
	type classifies the reading according to some useful typology.		
	Sta	atus	Optional
	Da	ıtatype	teidata.enumerated

	Sample val- ues include:	sub- stan-(substantive) the reading offers a substantive tive variant. or- tho- (orthographic) the reading differs only ortho- graphaphically, not in substance, from other read- ic ings.
cau		cause for the variant reading, according to any appropriate ossible origins.
	Status	Optional
	Datatype	teidata.enumerated
	Sample val- ues include:	homeoteleu- ton
		homeoarchy
		pa- le-
		0-
		graph- ic-
		Confu-
		sion
		hap- log-
		ra-
		phy
		dit-
		tog- ra-
		phy
		falseEmen-
		da- tion
	G / : .	
Var		ence) provides a number indicating the position of this read- ence, when there is reason to presume a sequence to the
	Status	Optional
	Datatype	<u>teidata.count</u>
	Note	Different variant sequences could be coded with distinct number trails: 1-2-3 for one sequence, 5-6-7 for another. More complex variant sequences, with (for example) multiple branchings from single readings, may be expressed through the <join> element.</join>
req	uire points to othe ing or lemma	r readings that are required when adopting the current read-
	Status	Optional
	Datatype	1-# occurrences of <u>teidata.pointer</u> separated by white-space
Note This	s element class defines attribi	utes inherited by < <u>rdg</u> >, < <u>lem></u> , and <rdggrp>.</rdggrp>
9.3.46. att.timed	s crement class defines attribu	and single of stage, some, and stagety.
7.5. 7 0. an.unea		

att.timed provides attributes common to those elements which have a duration in time, expressed either absolutely or by reference to an alignment map. [8.3.5. Temporal Information] Module tei

Members	gap		
Attributes	Attributes		
	start	indicates the begins.	location within a temporal alignment at which this element
		Status	Optional
		Datatype	teidata.pointer
		Note	If no value is supplied, the element is assumed to follow the immediately preceding element at the same hierar- chic level.
	end	indicates the ends.	location within a temporal alignment at which this element
		Status	Optional
		Datatype	teidata.pointer
		Note	If no value is supplied, the element is assumed to precede the immediately following element at the same hierarchic level.

9.3.47. att.transcriptional

att.transcriptional prov scribing manuscript or si			ding authorial or scribal intervention in a text when tran- Deletions]
Module	tei		
Members	add del restore	subst	
Attributes	Attributes att.ed	ditLike (@evidenc	ee, @instant) att.written (@hand)
	status	tion, strikeout	effect of the intervention, for example in the case of a dele s which include too much or too little text, or in the case , an insertion which duplicates some of the text already
		Status	Optional
		Datatype	teidata.enumerated
		Sample val- ues include:	 du- pli- all of the text indicated as an addition duplicates cate some text that is in the original, whether the duplication is word-for-word or less exact.
			du- pli- part of the text indicated as an addition duplicates cate-pane text that is in the original tial
			ex- cessSome text at the beginning of the deletion is tart marked as deleted even though it clearly should not be deleted.
			ex- cessEndhe text at the end of the deletion is marked as deleted even though it clearly should not be deleted.
			 short- S- some text at the beginning of the deletion is not tart marked as deleted even though it clearly should be.
			short- End some text at the end of the deletion is not marked as deleted even though it clearly should be.

		par- tial some text in the deletion is not marked as deleted even though it clearly should be. un- re- the deletion is not faulty.[Default] mark- able
	Note	Status information on each deletion is needed rather rarely except in critical editions from authorial manuscripts; status information on additions is even less common. Marking a deletion or addition as faulty is inescapably an interpretive act; the usual test applied in practice is the linguistic acceptability of the text with and without the letters or words in question.
cause	documents th	ne presumed cause for the intervention.
	Status	Optional
	Datatype	teidata.enumerated
seq		ssigns a sequence number related to the order in which the ures carrying this attribute are believed to have occurred. Optional teidata.count
	Datatype	tordata.count

9.3.48. att.typed

att.typed provides attributes that can be used to classify or subclassify elements in any way. [1.3.1. Attribute Classes 17.1.1. Words and Above 3.6.1. Referring Strings 3.7. Simple Links and Cross-References 3.6.5. Abbreviations and Their Expansions 3.13.1. Core Tags for Verse 7.2.5. Speech Contents 4.1.1. Un-numbered Divisions 4.1.2. Numbered Divisions 4.2.1. Headings and Trailers 4.4. Virtual Divisions 13.3.2.3. Personal Relationships 11.3.1.1. Core Elements for Transcriptional Work 16.1.1. Pointers and Links 16.3. Blocks, Segments, and Anchors 12.2. Attributes	si S	·	andNote> element describing the hand considered respon- ontent of the element concerned. Optional teidata.pointer

9.4. Macros

9.4.1. macro.paraContent

macro.paraContent (paragraph content) defines the content of paragraphs and similar elements. [1.3. The TEI Class System]		
Module	tei	
Used by	ab add del hi p ref restore seg title	
Content model	<content></content>	

9.4.2. macro.phraseSeq

```
macro.phraseSeq (phrase sequence) defines a sequence of character data and phrase-level elements. [1.4.1. Standard Con-
tent Models]
Module
                                  tei
Used by
                                  cl country editor name objectType orgName persName phr pubPlace publisher roleName rs
                                  s settlement stamp street term
Content model
                                       <alternate minOccurs="0'</pre>
                                        maxOccurs="unbounded">
                                        <textNode/>
<classRef key="model.gLike"/>
                                        <classRef key="model.attributable"/>
<classRef key="model.phrase"/>
                                        <classRef key="model.global"/>
                                       </alternate>
                                       </content>
Declaration
                                      macro.phraseSeq =
    ( text | model.gLike | model.attributable | model.phrase | model.global )*
```

9.4.3. macro.phraseSeq.limited

macro.phraseSeq.limited (limited phrase sequence) defines a sequence of character data and those phrase-level elements that are not typically used for transcribing extant documents. [1.4.1. Standard Content Models]

that are not typically used to	transcribing extant documents. [1.4.1. Standard Content Models]	
Module	tei	
Used by	classCode language span	
Content model	<pre><content> <alternate maxoccurs="unbounded" minoccurs="0"> <textnode></textnode> <classref key="model.limitedPhrase"></classref> <classref key="model.global"></classref> </alternate> </content></pre>	
Declaration	macro.phraseSeq.limited = (text model.limitedPhrase model.global)*	

9.4.4. macro.specialPara

macro.specialPara ('special' paragraph content) defines the content model of elements such as notes or list items, which either contain a series of component-level elements or else have the same structure as a paragraph, containing a series of phrase-level and inter-level elements. [1.3. The TEI Class System]

Module	tei	
Used by	accMat change handNote licence metamark note q quote	
Content model	<content></content>	

9.4.5. macro.xtext

macro.xtext (extended text) d	macro.xtext (extended text) defines a sequence of character data and gaiji elements.		
Module	tei		
Used by	<u>c</u>		
Content model	<pre><content> <alternate maxoccurs="unbounded" minoccurs="0"> <textnode></textnode> <classref key="model.gLike"></classref> </alternate> </content></pre>		
Declaration	macro.xtext = (text model.gLike)*		

9.5. Datatypes

9.5.1. teidata.certainty

teidata.certainty defin	teidata.certainty defines the range of attribute values expressing a degree of certainty.	
Module	tei	
Used by	teidata.probCert	
Content model	<content> <vallist type="closed"> <valitem ident="high"></valitem> <valitem ident="medium"></valitem> <valitem ident="low"></valitem> <valitem ident="low"></valitem> <valitem ident="unknown"></valitem> </vallist> </content>	
Declaration	teidata.certainty = "high" "medium" "low" "unknown"	
Note	Certainty may be expressed by one of the predefined symbolic values high, medium, or low. The value unknown should be used in cases where the encoder does not wish to assert an opinion about the matter.	

9.5.2. teidata.count

teidata.count defines the range of attribute values used for a non-negative integer value used as a count.	
Module	tei
Used by	
Content model	<pre><content> <dataref name="nonNegativeInteger"></dataref> </content></pre>
Declaration	teidata.count = xsd:nonNegativeInteger

Note Any positive integer value or zero is permitted

9.5.3. teidata.duration.iso

teidata.duration.iso de standard formats	efines the range of attribute values available for representation of a duration in time using ISO 8601
Module	tei
Used by	
Content model	<pre><content> <dataref name="token" restriction="[0-9.,DHMPRSTWYZ/:+\-]+"></dataref> </content></pre>
Declaration	teidata.duration.iso = token { pattern = "[0-9.,DHMPRSTWYZ/:+\-]+" }
Example	<pre><time dur-iso="PT0,75H">three-quarters of an hour</time></pre>
Example	<date dur-iso="P1,5D">a day and a half</date>
Example	<date dur-iso="P14D">a fortnight</date>
Example	<time dur-iso="PT0.02S">20 ms</time>
Note	A duration is expressed as a sequence of number-letter pairs, preceded by the letter P; the letter gives the unit and may be Y (year), M (month), D (day), H (hour), M (minute), or S (second), in that order. The numbers are all unsigned integers, except for the last, which may have a decimal component (using either . or , as the decimal point; the latter is preferred). If any number is 0, then that number-letter pair may be omitted. If any of the H (hour), M (minute), or S (second) number-letter pairs are present, then the separator T must precede the first 'time' number-letter pair. For complete details, see ISO 8601 Data elements and interchange formats — Information interchange — Representation of dates and times.

9.5.4. teidata.duration.w3c

teidata.duration.w3c de datatypes.	teidata.duration.w3c defines the range of attribute values available for representation of a duration in time using W3C datatypes.	
Module	tei	
Used by		
Content model	<content></content>	
Declaration	teidata.duration.w3c = xsd:duration	
Example	<time dur="PT45M">forty-five minutes</time>	
Example	<date dur="P1DT12H">a day and a half</date>	
Example	<date dur="P7D">a week</date>	
Example	<time dur="PT0.02S">20 ms</time>	
Note	A duration is expressed as a sequence of number-letter pairs, preceded by the letter P; the letter gives the unit and may be Y (year), M (month), D (day), H (hour), M (minute), or S (second), in that order. The numbers are all unsigned integers, except for the S number, which may have a decimal component (using . as the decimal point). If any number is 0, then that number-letter pair may be omitted. If any of the H (hour), M (minute), or S (second) number-letter pairs are present, then the separator T must precede the first 'time' number-letter pair. For complete details, see the W3C specification.	

9.5.5. teidata.enumerated

teidata.enumerated defines the range of attribute values expressed as a single XML name taken from a list of documented possibilities.	
Module	tei

Used by	Element:
	• app/@type
	• availability/@status
	correspAction/@type
	• gap/@reason
	• gap/@agent
	• <u>idno</u> /@type
	• interp/@type
	• <u>interpGrp</u> /@type
	• <u>org</u> /@role
	• <u>pc</u> /@force
	• pc/@unit
	• <u>person</u> /@role
	• person/@age
	• <u>q</u> /@type
	• <u>span</u> /@type
	• <u>spanGrp</u> /@type
	• <u>surface</u> /@attachment
	• <u>title</u> /@type
	• <u>title</u> /@level
	• <u>variantEncoding</u> /@method
	variantEncoding/@location
Content model	<pre><content> <dataref key="teidata.word"></dataref> </content></pre>
Declaration	teidata.enumerated = teidata.word
Note	Attributes using this datatype must contain a single 'word' which contains only letters, digits, punctuation characters, or symbols: thus it cannot include whitespace. Typically, the list of documented possibilities will be provided (or exemplified) by a value list in the associated attribute specification, expressed with a <vallist> element.</vallist>

9.5.6. teidata.language

teidata.language defines the range of attribute values used to identify a particular combination of human language and writing system. [6.1. Language Identification]

ing system. [6.1. Language Identification]	
Module	tei
Used by	Element:
	• <u>language</u> /@ident
Content model	<content> <alternate> <dataref name="language"></dataref> <vallist> <valitem ident=""></valitem> </vallist> </alternate> </content>
Declaration	teidata.language = xsd:language ("")
Note	The values for this attribute are language 'tags' as defined in BCP 47. Currently BCP 47 comprises RFC 5646 and RFC 4647; over time, other IETF documents may succeed these as the best current practice.

A 'language tag', per BCP 47, is assembled from a sequence of components or subtags separated by the hyphen character (-, U+002D). The tag is made of the following subtags, in the following order. Every subtag except the first is optional. If present, each occurs only once, except the fourth and fifth components (variant and extension), which are repeatable.

language

The IANA-registered code for the language. This is almost always the same as the ISO 639 2-letter language code if there is one. The list of available registered language subtags can be found at http://www.iana.org/assignments/language-subtag-registry. It is recommended that this code be written in lower case.

script

The ISO 15924 code for the script. These codes consist of 4 letters, and it is recommended they be written with an initial capital, the other three letters in lower case. The canonical list of codes is maintained by the Unicode Consortium, and is available at http://unicode.org/iso15924/iso15924-codes.html. The IETF recommends this code be omitted unless it is necessary to make a distinction you need.

region

Either an ISO 3166 country code or a UN M.49 region code that is registered with IANA (not all such codes are registered, e.g. UN codes for economic groupings or codes for countries for which there is already an ISO 3166 2letter code are not registered). The former consist of 2 letters, and it is recommended they be written in upper case; the list of codes can be searched or browsed at https://www.iso.org/obp/ui/#search/code/. The latter consist of 3 digits; the list of codes can be found at http://unstats.un.org/unsd/methods/m49/m49.htm.

variant

An IANA-registered variation. These codes are used to indicate additional, well-recognized variations that define a language or its dialects that are not covered by other available subtags.

extension

An extension has the format of a single letter followed by a hyphen followed by additional subtags. These exist to allow for future extension to BCP 47, but as of this writing no such extensions are in use.

priva-

te use

An extension that uses the initial subtag of the single letter x (i.e., starts with x-) has no meaning except as negotiated among the parties involved. These should be used with great care, since they interfere with the interoperability that use of RFC 4646 is intended to promote. In order for a document that makes use of these subtags to be TEI-conformant, a corresponding <language> element must be present in the TEI header.

There are two exceptions to the above format. First, there are language tags in the IANA registry that do not match the above syntax, but are present because they have been 'grandfathered' from previous specifications.

Second, an entire language tag can consist of only a private use subtag. These tags start with x-, and do not need to follow any further rules established by the IETF and endorsed by these Guidelines. Like all language tags that make use of private use subtags, the language in question must be documented in a corresponding slanguage> element in the TEI header.

Examples include

Shona

zh-TW

Taiwanese

zh-Han-

t-HK Chinese written in traditional script as used in Hong Kong

en-SL

English as spoken in Sierra Leone

pl

Polish

es-MX

Spanish as spoken in Mexico

es-419

Spanish as spoken in Latin America

The W3C Internationalization Activity has published a useful introduction to BCP 47, Language tags in HTML and XML.

9.5.7. teidata.name

teidata.name defines the range of attribute values expressed as an XML Name.	
Module	tei
Used by	
Content model	<content></content>
Declaration	teidata.name = xsd:Name
Note	Attributes using this datatype must contain a single word which follows the rules defining a legal XML name (see http://www.w3.org/TR/REC-xml/#dt-name): for example they cannot include whitespace or begin with digits.

9.5.8. teidata.numeric

teidata.numeric defines the ra	teidata.numeric defines the range of attribute values used for numeric values.	
Module	tei	
Used by		
Content model	<pre><content> <alternate> <dataref name="double"></dataref> <dataref name="token" restriction="(\-?[\d]+/\-?[\d]+)"></dataref> <dataref name="decimal"></dataref> </alternate> </content></pre>	
Declaration	teidata.numeric = xsd:double token { pattern = "(\-?[\d]+/\-?[\d]+)" } xsd:decimal	
Note	Any numeric value, represented as a decimal number, in floating point format, or as a ratio. To represent a floating point number, expressed in scientific notation, 'E notation', a variant of 'exponential notation', may be used. In this format, the value is expressed as two numbers separated by the letter E. The first number, the significand (sometimes called the mantissa) is given in decimal format, while the second is an integer. The value is obtained by multiplying the mantissa by 10 the number of times indicated by the integer. Thus the value represented in decimal notation as 1000.0 might be represented in scientific notation as 10E3. A value expressed as a ratio is represented by two integer values separated by a solidus (/) character. Thus, the value represented in decimal notation as 0.5 might be represented as a ratio by the string 1/2.	

9.5.9. teidata.outputMeasurement

teidata.outputMeasurement defines a range of values for use in specifying the size of an object that is intended for display.	
Module	tei
Used by	
Content model	<pre><content> <dataref name="token" restriction="[\-+]?\d+(\.\d+)?(% cm mm in pt pc px em ex gd rem vw vh vm)"></dataref> </content></pre>
Declaration	<pre>teidata.outputMeasurement = token { pattern = "[\-+]?\d+(\.\d+)?(% cm mm in pt pc px em ex gd rem vw vh vm)" }</pre>
Example	<pre><figure> <head>The TEI Logo</head> <figdesc>Stylized yellow angle brackets with the letters <mentioned>TEI</mentioned> in</figdesc></figure></pre>

	<pre>between and <mentioned>text encoding initiative</mentioned> underneath, all on a white background. <graphic <br="" height="600px" width="600px">url="http://www.tei-c.org/logos/TEI-600.jpg"/> </graphic></pre>
Note	These values map directly onto the values used by XSL-FO and CSS. For definitions of the units see those specifications; at the time of this writing the most complete list is in the CSS3 working draft.

9.5.10. teidata.pattern

teidata.pattern defines attribute values which are expressed as a regular expression.	
Module	tei
Used by	
Content model	<pre><content> <dataref name="token"></dataref> </content></pre>
Declaration	teidata.pattern = token
Note	A regular expression, often called a <i>pattern</i> , is an expression that describes a set of strings. They are usually used to give a concise description of a set, without having to list all elements. For example, the set containing the three strings <i>Handel</i> , <i>Händel</i> , and <i>Haendel</i> can be described by the pattern <code>H(ä ae?)ndel</code> (or alternatively, it is said that the pattern <code>H(ä ae?)ndel</code> <i>matches</i> each of the three strings) Wikipedia This TEI datatype is mapped to the XSD token datatype, and may therefore contain any string of characters. However, it is recommended that the value used conform to the particular flavour of regular expression syntax supported by XSD Schema.

9.5.11. teidata.point

teidata.point defines the data type used to express a point in cartesian space.	
Module	tei
Used by	
Content model	<pre><content> <dataref name="token" restriction="(-?[0-9]+(\.[0-9]+)?,-?[0-9]+(\.[0-9]+)?)"></dataref> </content></pre>
Declaration	teidata.point = token { pattern = "(-?[0-9]+(\.[0-9]+)?,-?[0-9]+(\.[0-9]+)?)" }
Example	<pre><facsimile> <surface lrx="400" lry="280" ulx="0" uly="0"> <zone points="220,100 300,210 170,250 123,234"> <graphic url="handwriting.png "></graphic> </zone> </surface></facsimile></pre>
Note	A point is defined by two numeric values, which should be expressed as decimal numbers. Neither number can end in a decimal point. E.g., both 0.0,84.2 and 0,84 are allowed, but 0.,84. is not.

9.5.12. teidata.pointer

teidata.pointer defines the range of attribute values used to provide a single URI, absolute or relative, pointing to some other resource, either within the current document or elsewhere.

of resource, cruier within the current document of elsewhere.	
Module	tei
Used by	Element:
	• <u>app</u> /@from
	• <u>app</u> /@to
	• <u>change</u> /@target
	• <u>classCode</u> /@scheme

	 keywords/@scheme metamark/@target span/@from span/@to
Content model	<content></content>
Declaration	teidata.pointer = xsd:anyURI
Note	The range of syntactically valid values is defined by RFC 3986 Uniform Resource Identifier (URI): Generic Syntax. Note that the values themselves are encoded using RFC 3987 Internationalized Resource Identifiers (IRIs) mapping to URIs. For example, https://secure.wikimedia.org/wikipedia/en/wiki/% is encoded as https://secure.wikimedia.org/wikipedia/en/wiki/%25 while http://-mrnx.mirbg4n###.############################ is encoded as http://ckbbajlc6dj7bxne2c.xn-wgbhlc/

9.5.13. teidata.probCert

teidata.probCert defines a range of attribute values which can be expressed either as a numeric probability or as a coded certainty value.	
Module	tei
Used by	
Content model	<pre><content> <alternate> <dataref key="teidata.probability"></dataref> <dataref key="teidata.certainty"></dataref> </alternate> </content></pre>
Declaration	teidata.probCert = teidata.probability teidata.certainty

9.5.14. teidata.probability

teidata.probability defines the range of attribute values expressing a probability.	
Module	tei
Used by	teidata.probCert
Content model	<content> <dataref name="double"></dataref> </content>
Declaration	teidata.probability = xsd:double
Note	Probability is expressed as a real number between 0 and 1; 0 representing <i>certainly false</i> and 1 representing <i>certainly true</i> .

9.5.15. teidata.replacement

teidata.replacement defines attribute values which contain a replacement template.	
Module	tei
Used by	
Content model	<pre><content> <textnode></textnode> </content></pre>
Declaration	teidata.replacement = text

9.5.16. teidata.sex

teidata.sex defines the range of attribute values used to identify human or animal sex.

Module	tei
Used by	Element:
	• person/@sex
Content model	<content> <dataref key="teidata.word"></dataref> </content>
Declaration	teidata.sex = teidata.word
Note	Values for attributes using this datatype may be locally defined by a project, or may refer to an external standard, such as vCard's sex property http://microformats.org/wiki/gender-formats (in which M indicates male, F female, O other, N none or not applicable, U unknown), or the often used ISO 5218:2004 <i>Representation of Human Sexes</i> http://standards.iso.org/it-tf/PubliclyAvailableStandards/c036266_ISO_IEC_5218_2004(E_F).zip (in which 0 indicates unknown; 1 male; 2 female; and 9 not applicable, although the ISO standard is widely considered inadequate); cf. CETH's <i>Recommendations for Inclusive Data Collection of Trans People</i> http://transhealth.ucsf.edu/trans?page=lib-data-collection.

9.5.17. teidata.temporal.iso

teidata.temporal.iso defines the range of attribute values expressing a temporal expression such as a date, a time, or a combination of them, that conform to the international standard *Data elements and interchange formats – Information interchange – Representation of dates and times*.

change - Representation of dates and times.	
Module	tei
Used by	
Content model	<pre><content> <alternate> <alternate> <dataref name="date"></dataref> <dataref name="gYear"></dataref> <dataref name="gMonth"></dataref> <dataref name="gMonth"></dataref> <dataref name="gYearMonth"></dataref> <dataref name="gYearMonthDay"></dataref> <dataref name="gMonthDay"></dataref> <dataref name="time"></dataref> <dataref name="time"></dataref> <dataref name="time"></dataref> <dataref name="time"></dataref> <dataref name="token" restriction="[0-9.,DHMPRSTWYZ/:+\-]+"></dataref> </alternate> </alternate></content></pre>
Declaration	<pre>teidata.temporal.iso = xsd:date xsd:gYear xsd:gMonth xsd:gDay xsd:gYearMonth xsd:gMonthDay xsd:time xsd:time token { pattern = "[0-9.,DHMPRSTWYZ/:+\-]+" }</pre>
Note	If it is likely that the value used is to be compared with another, then a time zone indicator should always be included, and only the dateTime representation should be used. For all representations for which ISO 8601 describes both a basic and an extended format, these Guidelines recommend use of the extended format. While ISO 8601 permits the use of both 00:00 and 24:00 to represent midnight, these Guidelines strongly recommend against the use of 24:00.

9.5.18. teidata.temporal.w3c

teidata.temporal.w3c defines the range of attribute values expressing a temporal expression such as a date, a time, or a combination of them, that conform to the W3C *XML Schema Part 2: Datatypes Second Edition* specification.

comormation of them, that comorm to the 11.50 Minutes at 11.12. Butterly a Second Edition specification.	
Module	tei
Used by	
Content model	<pre><content> <alternate> <dataref name="date"></dataref> <dataref name="gYear"></dataref></alternate></content></pre>

9.5.19. teidata.text

teidata.text defines the range of attribute values used to express some kind of identifying string as a single sequence of Unicode characters possibly including whitespace.

1 7	
Module	tei
Used by	
Content model	<content> <dataref name="string"></dataref> </content>
Declaration	teidata.text = string
Note	Attributes using this datatype must contain a single 'token' in which whitespace and other punctuation characters are permitted.

9.5.20. teidata.truthValue

teidata.truthValue defines the range of attribute values used to express a truth value.	
Module	tei
Used by	Element:
	• <u>pc</u> /@pre
	• <u>surface</u> /@flipping
Content model	<content> <dataref name="boolean"></dataref> </content>
Declaration	teidata.truthValue = xsd:boolean
Note	The possible values of this datatype are 1 or true, or 0 or false. This datatype applies only for cases where uncertainty is inappropriate; if the attribute concerned may have a value other than true or false, e.g. unknown, or inapplicable, it should have the extended version of this datatype: teidata.xTruthValue.

9.5.21. teidata.version

teidata.version defines the range of attribute values which may be used to specify a TEI or Unicode version number.	
Module	tei
Used by	Element: • TEI/@version
Content model	<pre><content></content></pre>

Declaration	teidata.version = token { pattern = $\lceil \lfloor d \rfloor + (\lfloor \lfloor d \rfloor +) \{0,2\} \rceil$ }
Note	The value of this attribute follows the pattern specified by the Unicode consortium for its version number (http://unicode.org/versions/). A version number contains digits and fullstop characters only. The first number supplied identifies the major version number. A second and third number, for minor and sub-minor version numbers, may also be supplied.

9.5.22. teidata.versionNumber

teidata.versionNumber defines the range of attribute values used for version numbers.		
Module	tei	
Used by		
Content model	<pre><content> <dataref name="token" restriction="[\d]+[a-z]*[\d]*(\.[\d]+[a-z]*[\d]*){0,3}"></dataref> </content></pre>	
Declaration	<pre>teidata.versionNumber = token { pattern = "[\d]+[a-z]*[\d]*(\.[\d]+[a-z]*[\d]*){0,3}" }</pre>	

9.5.23. teidata.word

teidata.word defines the range of attribute values expressed as a single word or token.		
Module	tei	
Used by	teidata.enumerated teidata.sexElement: • app/@loc • m/@baseForm • metamark/@function	
Content model	<pre><content> <dataref name="token" restriction="[^\p{C}\p{Z}]+"></dataref> </content></pre>	
Declaration	$teidata.word = token { pattern = "[^p{C}^p{Z}]+" }$	
Note	Attributes using this datatype must contain a single 'word' which contains only letters, digits, punctuation characters, or symbols: thus it cannot include whitespace.	

9.5.24. teidata.xTruthValue

9.5.25. teidata.xpath

teidata.xpath defines attribute values which contain an XPath expression.

Module	tei
Used by	
Content model	<content> <textnode></textnode> </content>
Declaration	teidata.xpath = text
Note	Any XPath expression using the syntax defined in 6.2 When writing programs that evaluate XPath expressions, programmers should be mindful of the possibility of malicious code injection attacks. For further information about XPath injection attacks, see the article at OWASP.
